EDUCATION

Arizona State University

Bachelor of Science, Computer Science

Aug 2021 - May 2025

- **GPA:** 3.8/4.0
- **Coursework:** Data Structures and Algorithms, Object Oriented Programming, Operating Systems, Software testing and Validation, Data Visualization, Human-Computer Interaction, Machine learning, Artificial Intelligence, Database Management, Distributed Systems, IOS App Development, Entrepreneurship

EXPERIENCE

Plus-Credit Ltd

Software Engineer Intern

Oct 2024 - May 2025

Tempe, AZ

- Developed backend modules using Java and Flask with a strong emphasis on object-oriented design to securely process sensitive financial data, aligning with compliance and privacy guidelines.
- Engineered and deployed RESTful APIs to enhance integration between internal systems and external partners, demonstrating agile development practices.
- Built and maintained distributed, low-latency backend services with PostgreSQL and Cloud Storage, ensuring scalable, fault-tolerant solutions for high-volume SaaS operations.
- Optimized both frontend and backend performance by reducing latency by 20% through targeted profiling and strategic caching techniques.
- Implemented CI/CD pipelines using GitHub Actions to streamline automated testing and deployment, reinforcing reliable software delivery.

Bharti Airtel Ltd

Software Engineer Intern

Jun 2024 - Aug 2024

Remote

- Developed Python-based embedded software pipelines on Linux platforms, contributing to enhanced operational throughput in a high-demand environment.
- Integrated automation tools interfacing with system-level APIs for embedded platforms, effectively reducing processing latency and ensuring robust performance.
- Collaborated with cross-disciplinary engineering and analytics teams to build comprehensive, end-to-end solutions that improved reporting speed by 30% and bolstered backend reliability.
- Refactored legacy code into modular, testable scripts, improving overall performance and maintainability for future software deployments.

Arizona State University

Teaching Assistant (CS Courses)

Aug 2022 - May 2025

Tempe, AZ

- Instructed over 300 students in core computer science concepts including data structures, algorithm design, and operating systems, using real-world examples to clarify complex topics.
- Guided lab sessions focused on SQL performance tuning and algorithm optimization, integrating principles of distributed systems and query performance analysis to enhance learning outcomes.

PROJECTS

AI-Powered Travel Planner App --- React Native + Gemini AI + Firebase

- Developed a mobile travel planning app using React Native and Expo, enabling 20% faster itinerary generation based on user preferences.
- Integrated Gemini AI for real-time personalized travel recommendations, increasing user engagement by 30%.
- Deployed Firebase functions to simulate serverless microservices, improving scalability and reducing app load time, and optimized navigation flow with React Navigation, improving user experience by 25%.

Trace Guard – Real-Time API Performance Monitor --- Flask + Prometheus + Docker

- Built a backend service in Flask that tracks and stores response time, error rates, and throughput for REST APIs in real-time.
- Integrated Prometheus and Grafana to visualize API health metrics, set alerts, and support SLO dashboards.
- Deployed containerized services using Docker and orchestrated via Docker Compose for modular scaling. Simulated high-load traffic using Locust to benchmark performance and identify system bottlenecks under stress.

Bookstore Management System --- Flask + PostgreSQL + Tailwind CSS

- Developed a full-stack Bookstore Management System using Flask and PostgreSQL, applying SDLC principles, debugging techniques, and optimizing backend performance.
- Developed a scalable front-end using HTML, JavaScript, and Tailwind CSS, implementing reusable UI components and optimizing performance.
- Conducted unit testing and debugging to ensure reliable backend functionality and improve overall code quality.

SKILLS

- **Programming Languages:** Python, Java, JavaScript, C/C++
- **Frameworks:** Flask, Spring Boot, ReactJS, NodeJS
- **Databases:** SQL, PostgreSQL, MongoDB
- **Tools:** Docker, Git, AWS, CI/CD, GitHub Actions, Selenium, Postman, VS Code
- **Systems:** Distributed Systems, REST APIs, Microservices
