

LAKSHMI S
Full Stack Developer

|| surisetiprasanna.9@gmail.com || +1 (940) 465-9901 ||

Summary

I am a skilled Full-Stack Developer with 5+ years of experience delivering production-grade applications using Java, Spring Boot, and React. Proficient in developing testable, secure, and well-documented code while supporting CI/CD pipelines and on-call responsibilities. Demonstrated ability to lead small initiatives, collaborate cross-functionally, and mentor junior developers. Adept at identifying system-level issues, improving team processes, and contributing to scalable, reliable software solutions. Known for a strong growth mindset, proactive problem-solving, and commitment to continuous improvement.

SKILLS

Programming Languages: C, C++, Java (including Java 8), Python, Ruby, Linux, Shell Scripting, PowerShell, Data Structures, Algorithms

Frontend Technologies: HTML5, CSS3, JavaScript, React.js, Angular, Vue.js

Backend Technologies & Frameworks: Spring Boot, Node.js, Hibernate, Microservices Architecture

Web Technologies & Big Data Tools: Hadoop Ecosystem, Talend, Apache Airflow, Apache Spark, Kafka

Databases & Cloud Platforms: MySQL, MongoDB, NoSQL, Snowflake, Google Cloud Platform (GCP), AWS EC2, AWS S3, AWS Lambda

Development & DevOps Tools: GitHub, Jenkins, Docker, Terraform, Jupyter Notebook, RESTful APIs, DevOps

Software Development Methodologies: Software Development Life Cycle (SDLC), Waterfall Model

Data Visualization Tools: Microsoft Excel, Tableau, Power BI

Certification

AWS Certified Solutions Architect – Associate- <https://www.credly.com/earner/dashboard>

PROFESSIONAL EXPERIENCE

Full Stack Java Developer, Exelon Corporation, USA

FEB 2025– CURRENT

- Created and implemented scalable web apps with React.js, Angular, and Vue.js for the front end and **Java (Spring Boot)** for the back end.
- Using **Java (Core Java, Spring Boot, and Spring MVC)**, I created end-to-end web apps to provide dependable, scalable, and secure backend services.
- Ensured effective communication between microservices and frontend components by designing and consuming **RESTful** and **GraphQL APIs**.
- Using services like **AWS EC2, Lambda, S3, RDS, and API Gateway**, **scalable microservices** were developed and put into use on AWS infrastructure.
- Integrated Python backends with frontend React apps using Axios and JSON-based data transfer.
- • Developed and delivered **production-ready Java/React code** that met acceptance criteria, was easily testable, and accounted for edge cases, security vulnerabilities, and error handling.
- Created and maintained **CI/CD pipelines** using tools like Jenkins/GitHub Actions, ensuring seamless build, deployment, and rollback processes.
- Provided **on-call support**, performed root cause analysis, and resolved moderately complex issues across microservices and deployment environments.
- Led and executed **small-scale development initiatives independently**, demonstrating growing technical ownership and leadership.
- Collaborated across Agile teams to **define story sizing, prioritize tasks**, and ensure continuous integration and incremental delivery.

- Recommended and implemented **process improvements and tooling enhancements** at the team level to align with industry standards.
- Investigated and **diagnosed cross-system issues**, escalating and coordinating resolutions with appropriate stakeholders.
- Contributed to system reliability by supporting **application monitoring, logging**, and alerting strategies using tools like Datadog or Prometheus.
- Demonstrated strong accountability by **managing workload**, escalating blockers, and driving timely completion of deliverables.
- Participated in sprint planning, daily standups, retrospectives, and the delivery of high-caliber, incremental releases when working in **Agile/Scrum teams**.
- Verified frontend compatibility across browsers and devices, enhanced backend performance, and troubleshooted and fixed bugs throughout the whole stack.
- Managed containerization techniques, deployment scripts, and log management for effective system operations as part of DevOps projects.
- To protect sensitive userdata, strong authentication and permission procedures were implemented using **Spring Security**.

Programmer Analyst, Navasal International Pvt Ltd, Vijayawada, India

NOV 2021– DEC 2022

- utilized the Java, Spring MVC, and Struts frameworks to analyze system needs and create scalable corporate applications.
- In order to facilitate cross-platform business operations, SOAP and RESTful web services were designed and implemented.
- developed advanced PL/SQL stored procedures, triggers, and performance-optimized queries while working with Oracle and PostgreSQL databases.
- used Apache Kafka to create distributed, fault-tolerant systems and stream events in real time.
- Talend and Apache Airflow were used to implement ETL pipelines and data processes, guaranteeing smooth data transformation and ingestion.
- Maven, Gradle, and Nexus Repository Manager were used to manage the builds and deployments of applications.
- contributed to sprint planning, UAT testing, and technical documentation while using both Agile and Waterfall approaches, depending on the requirements of the project.
- contributed to sprint planning, UAT testing, and technical documentation while using both Agile and Waterfall approaches, depending on the requirements of the project.
- automated backend processes and system maintenance using Shell Scripting and Crontab.
- Continuously ensured the smooth operation of **RESTful APIs** by addressing connectivity issues, optimizing response times, and reducing failures by 30%.
- Developed **automated test cases and CI/CD pipelines** for seamless deployment using Jenkins and AWS Code Pipeline. Diagnosed and resolved **API failures, database inconsistencies, and performance bottlenecks**, reducing average issue resolution time by 40%.

Full stack java developer, Znalytics (AGILITY CIS), Hyderabad, India

NOV 2018 – OCT 2021

- Created scalable **RESTful Java APIs** with **Spring Boot** that guarantee smooth device registration, telemetry data intake, and health tracking. Event-driven operations were automated using **AWS Lambda**, improving platform scalability.
- Reduced data errors by 15% by optimizing **ETL** pipeline performance.
- Configured **AWSIoT** Core to handle hundreds of devices' connections at once effectively and safely.
- Used **Hadoop** to improve data handling and eliminate bottlenecks by storing and processing massive amounts of telemetry data in a distributed manner. Used **Spark** to handle data in batches and in real time, streamlining the telemetry data flow and facilitating quicker analytics.
- Created a responsive **React** dashboard to enhance user engagement by displaying device statuses, performance metrics, and real-time telemetry data.
- Developed and maintained backend modules and automation scripts using Python for data processing and system monitoring.
- Wrote clean, reusable, and efficient Python code following PEP8 standards and OOP principles.
- Utilized Python for quick prototyping, scripting, and building utilities for various automation and integration tasks.
- **Tableau** was integrated for sophisticated data visualization, enabling users to examine telemetry patterns, device performance, and other important information via interactive **dashboards**.
- Created scalable data pipelines with **Hadoop** and **Spark** to manage huge telemetry datasets, facilitating effective data processing and archiving. **Redis** caching improved system responsiveness and reduced latency for high-performance real-time data access

INTERNSHIP

Summer Intern, KEN TECHNOLOGIES MAR 2018 –Dec 2018

Code Quality & Optimization: Applied best practices in Java programming, ensuring code efficiency and reliability.

EDUCATION

Master of Science in Information Systems and Technologies

JAN 2023 - DEC2024

University of North Texas, Denton, Texas

Coursework: Information Systems and Development, Enterprise Applications of Business Intelligence, Fundamentals of Database, Programming Languages for Business Analytics, Emerging Technologies, Fundamentals of Artificial Intelligence.

Bachelor of Technology in Electronics and Communication Engineering

JUN 2016 – MAY 2019

Jawaharlal Nehru Technological University, Kakinada, Andhra Pradesh, India

Coursework: Data Structures, Database Management Systems, Computer Networks, Embedded Systems, VLSI.

ACADEMIC PROJECTS

Personal Expense Tracker: Developed a smartphone application that tracks income and spending to assist users in managing their finances. With features including transaction classification, search and filter capabilities, and interactive graphs for financial data visualization, the software provides a smooth user experience.

Tool Stack: React Native, SQLite, Context API/Redux, JavaScript, React Native Chart Kit.

Smart Home Automation: Implemented a smart home automation system based on the Internet of Things that allows users to remotely manage appliances, fans, and lights using a mobile or online application. The project concentrated on IoT protocols, secure cloud integration, and real-time communication for smooth user engagement and automation.

Tool Stack: Arduino/Raspberry Pi, MQTT, AWS IoT Core.

Food Delivery System: Developed a full-stack online application that lets customers order meals, browse restaurants, put goods in their carts, and check the status of their orders in real-time, we have an admin panel for handling restaurant information, menus, and orders also included in the platform.

Tool Stack: React, HTML, CSS, JavaScript, MongoDB, GitHub.

Real-Time Traffic Monitoring Dashboard: Developed and implemented a dashboard for real-time traffic monitoring that shows current traffic information on an interactive map. Google Maps and OpenStreetMap APIs were integrated to show traffic flow, areas of congestion, and past traffic trends.

Tool Stack: React, HTML, CSS, JavaScript, Node.
