Professional Summary

A data Analyst with 2 years of experience in machine learning, statistical analysis, and data-driven decision-making, skilled at applying data insights to solve business challenges and drive informed decisions. Proficient in Python, and SQL, with expertise in building predictive models, data preprocessing, data visualization tools, with a strong ability to extract insights from complex datasets and big data technologies Adept at transforming raw data into actionable strategies, delivering measurable results, and optimizing processes. Capable of solving business challenges through innovative analytical solutions and clear communication of findings.

Education

University of Cincinnati, Cincinnati, Ohio Master of Engineering in Computer and science Coursework: Operating Systems, Cloud Computing, Adv. Methods in Machine Learning, Requirements Engineering	Expected Graduation May 2025 GPA: 3.9/4
SRM University, Andhra Pradesh, India Bachelors of Technology, Computer Science and Engineering Major: Machine Learning, Database System, C, Java, Python, Software Engineering, Operating Systems, Data structures	Graduated May 2023 GPA: 3.8/4

Technical Skills

Programming: Python (NumPy, Pandas, Scikit-learn, TensorFlow, PyTorch), SQL, Java.
Machine Learning: Supervised & Unsupervised Learning, Deep Learning (CNN, RNN, LSTM), NLP, Model Evaluation, Hyperparameter Tuning.
Data Analysis: Data Cleaning, Exploratory Data Analysis (EDA), Statistical Analysis, Hypothesis Testing
Big Data & Cloud: AWS (S3, SageMaker), Google Cloud (BigQuery, Colab), Azure, Data Pipeline Development.
Web Development: HTML, CSS, Javascript, Reactjs, Nodejs
Data Visualization: Tableau, Power BI, Matplotlib, Seaborn, Plotly
Databases: MySQL, PostgreSQL, MongoDB, Snowflake.
Tools & Technologies: Jupyter Notebooks, MATLAB, Git, Docker, APIs, ETL Development, Microsoft Excel, visual studio code.

Work Experience

Data Analyst PointTech	June 2024 – Dec 2024
- Collected and analyzed stock market data using Yahoo Finance API, Pandas, and NumPy, leading to a 15% improvement in market trend predictions. - Built LSTM-based forecasting models with TensorFlow/Keras, enhancing stock price prediction accuracy by 20%. - Automated real-time data retrieval using AWS Lambda, reducing manual intervention by 80%. - Developed interactive dashboards (Plotly, Matplotlib) to visualize financial trends, increasing stakeholder engagement by 30%.	
Graduate Assistant University of Cincinnati	Dec 2023-May 2024
- Assisted faculty in data analysis and academic research using Python (Pandas, NumPy, Matplotlib), improving research efficiency by 25%. - Mentored and graded students in data-related coursework, providing hands-on guidance in data analysis and visualization techniques. - Created reports and dashboards in Jupyter Notebook, Power BI, and Excel, streamlining the data presentation process for research papers. - Managed and analyzed large datasets, optimizing data processing workflows for faculty research projects.	

Academic Projects

Lead Developer and Researcher -Inequality Measures Based on Bitcoin Price Prediction	Jan 2023 – May 2023
- Developed a machine learning model that incorporates data on economic inequality to improve the accuracy of Bitcoin price predictions. - Used statistical methods such as Gini coefficients in addition to machine learning algorithms such as linear regression, decision trees, and neural networks. - Prediction accuracy increased by 15%, giving stakeholders and investors accurate information. Technologies: Numpy, Pandas, Scikit-learn, TensorFlow, Python.	
Machine Learning Researcher-Prediction of Student’s Early Dropout from Online Courses	Jan 2022 – Apr 2022
<i>Research Project UROP</i> - A machine learning model was created to predict student dropouts from online courses by assessing participation rates, activity patterns, and statistics. - Utilizing techniques like Decision Trees, Random Forest, Support Vector Machines, and Gradient Boosting, a Python-based pipeline was constructed. - Achieved 96% accuracy, outperforming previous models and providing valuable information for improving student retention methods. Technologies: Seaborn, Matplotlib, Scikit-learn, and Python.	
X-Ray Image Enhancement Using USM+CLAHE for Airport Security	Oct 2021-Dec 2021
- An X-ray image enhancement algorithm combining USM+CLAHE is proposed to address the problem of colour distortion in CLAHE enhanced airport security X-ray images. - First, compute grayscale images on the R, G, and B channels of the X-ray image, then perform CLAHE enhancement on the enhanced R, G, and B grayscale images. - Following that, perform the USM sharpening operation on the CLAHE-enhanced X-ray image, and finally merge the original image and the USM sharpened image based on the weight. - The experimental results show that the USM+CLAHE algorithm can effectively enhance the security X-ray image while suppressing the enhanced image's colour distortion	

Certifications

- Career Essentials in Generative AI - **Microsoft and LinkedIn**
- Career Essentials in Data Analysis - **LinkedIn**
- Data Analyst Bootcamp - Alex Data Expert.
- Python(Basic) Certification - **Hacker Rank**
- Machine learning Research certificate –UROP(Received the **Silver medal**)
- Data science with python-**simplelearn**.
