

Lakshmi Roshini Vaitla

+1 3165199963 | Roshini6768@gmail.com

Professional Summary:

- Over 7+ years of IT experience in Data Analysis, ETL/Report Development, Data Modelling, and Project Management.
- Experience in various phases of the Software Development life cycle (Analysis, Requirements gathering, and designing) with expertise in documenting different requirements, functional specifications, Test Plans, Source Target mappings, and SQL Joins.
- User training, overseeing production deployment, and managing resolutions to production issues.
- Extensive experience using various data visualization tools like Tableau, BO, Crystal Reports, Power BI, etc.
- Trace requirements throughout the SDLC process using the Requirements Traceability Matrix (RTM), documenting business processes, and translating them to functional specifications.
- Equipped with expertise in data mining and data cleansing by using tools like Tableau and @RISK.
- Strong experience in Data Analysis, Data Migration, Data Cleansing, Transformation, Integration, and Data Export using multiple ETL tools such as Informatica PowerCenter and using open-source frameworks such as Spark and Hadoop.
- Experience in testing and writing SQL and PL/SQL statements - Stored Procedures, Functions, Triggers, and packages.
- Strong experience working with Big Data Technologies such as Hadoop and Spark.
- Utilized AWS tools to assess data quality, identifying and rectifying anomalies, inconsistencies, and errors in the analyzed datasets to enhance the accuracy of insights.
- Experienced in Cloud Services such as AWS EC2, EMR, RDS, and S3 to assist with big data tools, solve data storage issues, and work on deployment solutions.
- Crafted compelling narratives using Power BI by coherently arranging visualizations to effectively guide stakeholders through data analysis and present actionable insights.
- Utilized AWS's comprehensive data analytics services, such as Amazon Redshift, AWS Glue, and Amazon Quick Sight, to conduct in-depth data analysis, transform raw data into actionable insights, and provide valuable recommendations to stakeholders. Effectively harnessed the power of cloud computing to handle large datasets and deliver meaningful business insights.
- Hands-on experience with Azure cloud (Azure Databricks, ADF, Azure SQL server, Synapse)
- Leveraged Azure's suite of data analytics tools, including Azure Data Factory, Azure Databricks, and Azure Synapse Analytics, to perform advanced data analysis, transformation, and visualization tasks.
- Hands-on working experience with Snowflake cloud Datawarehouse database.
- Proficient in designing and developing various dashboards and reports utilizing Tableau visualizations like bar graphs, pie charts, geographic visualization, and other local and global filters according to the end user requirements.
- Trace requirements throughout the SDLC process using the Requirements Traceability Matrix (RTM), documenting business processes and translating them to functional specifications.
- Utilized Azure Data Quality Services to profile and assess data quality, identifying and rectifying anomalies, inconsistencies, and errors in the analyzed datasets.
- Excellent experience working with analytical and data visualization tools and techniques (Tableau and Power BI)
- Experience in Data Management using Collibra for Enterprise Data Governance.
- Experience in data modeling with expertise in creating Star & snowflake schemas, FACT and dimensions tables, and physical and logical Data Modelling using Erwin.
- Experience developing Process Flow Diagram, Use Case Diagram, Activity Diagram, and Database schema generation using UML tools like Visio and Oracle SQL developer.
- Experience in writing complex SQL queries to perform data completeness, correctness, data transformation,

and data quality verification for source-to-target mapping.

- Experience in conducting Joint Application Development (JAD) sessions with Business users, Subject Matter Experts (SMEs), and Development and QA teams.

Certification:

- Certified in Google Data Analytics

Technical Skills:

Database Systems	Snowflake, Teradata, IBM DB2, SQL Server, Oracle, MySQL.
Data Modeling Tools	Dimensional Data Modeling, Star Schema Modeling, Snow-Flake Modeling, FACT and Dimensions Tables, Conceptual, Logical Data Physical Modeling, Erwin 7.2/3/4, Visio, Collibra, Lucid Chart.
Big Data Technologies	Hadoop, Hive, Spark, PySpark, Databricks.
Project management	Jira Atlassian, ServiceNow, BMC, HP ALM.
Data Warehousing Tools	Informatica, Datastage.
Cloud Technologies	AWS (EMR, EC2, S3, Athena) and Azure (Blob Storage, Azure HD Insights, MS-SQL Server).
Programming Languages	Python, SQL, Shell Scripting.
Office Applications	MS Office (Word, Excel, Visio, PowerPoint, Project)
Reporting tools / Analytical tools	Tableau, PowerBI, Looker, and SQL Server reporting services.

Professional Experience:

Truist Financial - Charlotte, NC
Senior Data Analyst

Aug 2023 to till Date

Responsibilities:

- In-depth understanding of mortgage data and concepts, including loan origination, mortgage-backed securities, Underwriting and Pricing, Capital Markets, Loss Mitigation, and Risk Management
- Conducted extensive research and analysis to identify trends, patterns, and insights within large datasets.
- Demonstrated ability to identify and solve complex business problems related to mortgage data analysis.
- Implemented comprehensive data governance and GDPR principles in the data warehouse (Snowflake) and data lake (Amazon S3), ensuring data security and privacy and maintaining regulatory compliance.
- Utilized big data technologies (Apache Spark, Hadoop, Hive) for processing and analyzing large datasets in distributed environments, including real-time analytics.
- Experience working with Databricks ecosystem for running spark applications and used snowflake database for running all adhoc queries and used it as DWH database.
- Deployed data analytics solutions using cloud-based platforms like Amazon Web Services (AWS), leveraging services like Amazon S3, Redshift, and EMR for scalable data processing, storage, and querying.
- Utilized SQL for data integration and data migration tasks, including ETL (Extract, Transform, Load) processes.
- Leveraged Snowflake Database for efficient data storage, retrieval, and analysis.
- Strong analytical and critical thinking skills to identify opportunities for process improvement and make

data-driven recommendations.

- Collaborated with stakeholders to gather and document business requirements, data sources, and target system specifications.
- Employed statistical models and machine learning algorithms, leveraging SQL, R, and Python to analyze data.
- Utilized Excel spreadsheets, Pivot tables, macros, and graphs for data management, financial modeling, and generating reports.
- Extracted data from MySQL source database using SQL Server Integration Services (SSIS) and created target tables in the destination MySQL database for transformed data storage.
- Worked with Collibra for Cataloging, Lineage and for maintaining Business Data Glossary.
- Collaborated closely with technical teams to determine data transfer requirements from Oracle DB to Google Cloud Platform (GCP), leveraging tools like Oracle Data Integrator (ODI).
- Developed comprehensive reports and presentations, effectively communicating complex financial insights to both technical and non-technical stakeholders using SQL-based data visualization tools like Tableau.
- Written parameterized SQL queries for dynamic filtering, drill-down, and ad-hoc analysis, enabling user-driven data exploration and customization of query results.
- Conducted comprehensive data mining and data extraction activities from various sources, including databases, spreadsheets, and external APIs, to gather relevant business data for analysis.
- Devised and implemented a versatile framework suitable for Agile and Waterfall SDLC projects, improving deliverable turnaround times and product quality.
- Created Business and Functional Requirement Documents (BRDs, FRDs) to define project objectives, data requirements, and expected outcomes, ensuring stakeholder alignment.
- Facilitated Joint Requirements Planning (JRP) sessions with business user groups, conducted Joint Application Design (JAD) sessions with IT groups, and managed conflicts among project team members.
- Optimized project management workflows, increased team productivity, and created user stories using JIRA.
- Utilized JIRA to track project progress and provided comprehensive end-user training for proficient tool usage.
- Collaborated effectively with stakeholders, subject matter experts, and team members using Visio for requirements gathering, feedback capturing, and diagram documentation.

Environment: AWS (EMR, EC2, S3, Athena, Lambda, Glue), Snowflake, Jira, VersionOne, Collibra, Hadoop, Power BI, AWS, MS Access, MS Excel, Visio, Informatica, Unix, Oracle, SQL Server, HiveQL, Tableau, SAS, UNIX, Shell Scripting, Erwin.

Mayo Clinic, Rochester, MN
Senior Data analyst

Jan 2022 to Jul 2023

Responsibilities:

- Gathered and documented business requirements for existing and future business systems.
- Involved in Managing Data modeling projects from Logical design and implementation of Sybase Database
- Involved in developing an automation framework using SOAPUI for the execution of test scripts to execute REST-based web services.
- Created MS Visio flowchart MOCKUPS of current system designs and applied changes from Business Requirements.
- Involved in designing Data-Stage ETL jobs for extracting data from heterogeneous source systems, transforming, and finally loading into Data Marts.
- Collaborated with healthcare professionals and subject matter experts to ensure data models adhered to industry standards and regulations (HIPAA, HL7, ICD-10 coding).
- Expertise in developing High-level design, Conceptual design, and Logical and Physical design for databases, Data warehousing, and many Distributed IT systems.

- Generated multiple ad-hoc Python tools and scripts to facilitate map generation and data manipulation.
- Coordinated relationships between business & technical teams to detail user stories (requirements) to be approved for Sprint & Release plans through Service Now SDLC.
- Developed and executed advanced SQL queries using Azure SQL Database, extracting insights and patterns from data. Leveraged performance tuning techniques to optimize query performance for efficient analysis.
- Converted various SQL statements into stored procedures, thereby reducing the number of database accesses.
- Created interactive and visually appealing data visualizations and reports using Power BI, connecting to Azure-based data sources.
- Utilized Tableau to explore and analyze large datasets, uncovering trends, patterns, and outliers that provided valuable insights for business decision-making.
- Manage and create JIRA epics for confidential projects and translate functional design requirements into JIRA user stories.
- Responsible for creating and changing the visualizations in Power BI reports and Dashboards per the client's Requirements.
- Executed data definition and data manipulation operations for data analysis.
- Data mapping, and logical data modeling, created class diagrams and ER diagrams and used SQL queries to filter data within the Oracle database.
- Designed and documented high-level functional requirements and low-level design documents.
- Designed and constructed customized Power BI dashboards tailored to meet specific business objectives, effectively presenting key performance indicators (KPIs) and metrics intuitively and visually appealingly.
- Utilized Azure Stream Analytics to process and analyze real-time streaming data, enabling timely insights and rapid decision-making based on dynamic data sources.
- Developed complex transformation logic within Informatica to perform data calculations, aggregations, derivations, and data enrichment based on business requirements.
- Performed report validation writing SQL queries using TOAD on an Oracle database.
- Involved with Release Management for multiple build/release-related dashboard updates.
- Performed functional testing of Soap and Restful Web Services using the SOAP UI Tool.
- Used Query Analysis and Execution Plan to optimize SQL Queries.
- Applied data masking techniques using Informatica to protect sensitive information and ensure compliance with data privacy regulations, maintaining data security and confidentiality.
- Imported and exported repositories across projects.
- Used Aggregator stages to sum the key performance indicators used in decision support systems.

Environment: Jira, Collibra, Hadoop, Power BI, AWS, MS Access, MS Excel, Visio, Informatica, Unix, Oracle, SQL Server, HiveQL, Tableau, SAS, UNIX, Shell Scripting, Erwin.

MetLife, New York, NY
Data Analyst

Nov 2020 to Nov 2021

Responsibilities:

- Collected, organized, and analyzed healthcare data from clinical trials, electronic health records, and claims data.
- Applied statistical techniques and data analysis methods to identify trends, patterns, and insights.
- Checked provider enrollment, member enrollment, and member eligibility for Medicaid and Medicare claims.
- Reviewed the validity of EDI X12 271 ("eligibility response"), EDI 276 ("claim status"), and EDI 834 ("enrollment") for claims processing.
- Improved project management processes and workflows in Jira, implementing enhancements to optimize efficiency, transparency, and delivery.
- Performed Extract, Transform, Load (ETL) processes to clean and analyze data from primary and secondary

sources.

- Implemented data models to integrate and analyze electronic health records (EHR), providing comprehensive patient insights for informed healthcare decision-making.
- Created a variety of diagrams using Microsoft Visio, including flowcharts, process maps, organizational charts, network diagrams, and floor plans.
- Collaborated closely with Project Managers to understand project goals, scope, and timelines, ensuring alignment with business data analysis objectives.
- Facilitated and participated in JAD sessions with business stakeholders, subject matter experts, and cross-functional teams to gather detailed requirements for data analysis and business intelligence projects.

Mondelez Inc., Hyderabad, India
Data Analyst (Intern)

Jan 2018 - Aug 2020

Responsibilities:

- Conducted comprehensive data and statistical analysis using Excel, Python, Tableau, and R, employing techniques such as hypothesis testing, regression analysis, and clustering, leading to improved data-driven decision-making processes.
- Designed and implemented Python scripts for data cleaning and processing, resulting in a 30% reduction in processing time.
- Led comprehensive analysis of sales data using Python, SQL, Matplotlib, Seaborn, and machine learning algorithms (e.g., regression, clustering), improving sales forecasting accuracy by 15%.
- Achieved a 15% improvement in prediction accuracy and a \$5 million increase in annual revenue through informed strategic decision-making based on analysis insights.
- Utilized Tableau to analyze data trends, identifying a 10% increase in average order value and 25% rise in customer retention.
- Applied advanced statistical methods in R, including multivariate analysis and time series analysis, leading to a 20% efficiency increase and a 15% reduction in operational costs.
- Formulated precise data requirements and improved business efficiency through Data Warehousing and Data Mining, contributing to a 20% quarterly revenue increase via insightful dashboards.
- Conducted ad hoc analysis for sales forecasting, inventory management, and customer segmentation, supporting strategic business decisions.
- Contributed significantly to a \$3 million annual revenue uplift through effective churn prediction and customer retention strategies.
- Designed and executed A/B tests to evaluate the effectiveness of marketing campaigns, resulting in a 10% improvement in conversion rates.
- Performed data profiling to analyze data sources and identify data quality issues, facilitating the creation of more accurate and reliable datasets.
- Developed and maintained automated data pipelines for efficient data extraction, transformation, and loading (ETL) processes, ensuring data quality and integrity.
- Implemented best practices within Agile methods to optimize data models and data engineering processes, enhancing development process efficiency.
- Spearheaded robust data architecture and data governance initiatives, consistently meeting data quality standards and improving data reliability.
- Standardized robust data infrastructure, led data transformation initiatives, and created effective data visualizations, enhancing business intelligence and decision-making.
- Collaborated with cross-functional teams to identify business needs, define KPIs, and develop actionable insights, supporting business objectives.
