

Lakshmi Vivek Jagabathina

Java Developer

+1 410-627-8205 | Baltimore, MD | lakshmi2@umbc.edu | [LinkedIn](#)

Professional Summary

Full-Stack developer with experience building scalable enterprise solutions using Java and the Spring framework. Proven ability to design and deploy robust applications, with expertise in microservice environments, RESTful APIs, and systems design. Experience in Salesforce administration includes managing and maintaining the platform, ensuring optimal performance and user experience. Delivered core features and performance optimizations for government workflow systems at MTX Group, working across the entire SDLC, showcasing strong software engineering skills and experience in cloud automation. Implemented both front-end and back-end development, Designed REST API, and coordinated CI/CD workflows using tools like AWS, Lambda, and S3. Created SaaS and academic platforms that combine responsive UIs with powerful backend logic, focusing on building Single Page Applications with a strong UI/UX focus.

EDUCATION

Master of Science in Computer Science | University of Maryland, Baltimore County, Baltimore, Md. Aug 2023 - May 2025

Bachelor's in Computer Science | B.V Raju Institute of Technology, Hyderabad, India. Jul 2017 - Jun 2021

SKILLS

- **Methodologies:** SDLC, Jira, Agile/Scrum.
- **Languages:** Java, JavaScript, SQL, Python, Apex, Node.js, c#.
- **Web Technologies:** HTML5, CSS3, JavaScript, JSON, Typescript, Lightning Web Components (LWC), webpack.
- **Framework:** Spring Boot, Spring MVC, Spring REST, Spring web flow, React, Angular.
- **Database:** MySQL, MongoDB.
- **Cloud:** AWS (EC2, Lambda, Cloud Watch, ECS, Service Discovery), Salesforce, GCP (Google Cloud Platform).
- **CI/CD and DevOps Tools:** Git, GitHub, Bitbucket, Postman, Docker, Kubernetes, Jenkins.

WORK EXPERIENCE

University of Maryland, Baltimore County (UMBC), USA | Graduate Assistant Jan 2024 – May 2025

- Coordinated teaching activities and assessment workflows for 150+ students across networking, cryptography, and OS subjects, boosting grading efficiency by 20%; developed and delivered training programs on new software and technologies.
- Developed automated grading scripts using Python and Junit, implementing TDD methodologies, that analyzed student code submissions for security vulnerabilities and performed data cleansing, improving grading efficiency by 20% and providing enhanced cybersecurity insights.

MTX Group Inc, India | Software Developer Sept 2021 – Jul 2023

- Developed Microservices based licensing application workflows for Washington Department of Health using Java and Spring Boot, consuming RESTful APIs and applying object-oriented concepts in software development within an Agile Scrum environment, ensuring high availability and efficient REST API development. Improved front-end performance by optimizing JavaScript, HTML5, and CSS3 code; created custom objects and page layouts to enhance user experience and streamline workflows.
- For the Arizona Department of Housing, developed permit application flows using Java, Spring Boot, JPA, JDBC, and Hibernate, leveraging the Spring framework and dependency injection to streamline multi-step processes and boosting user satisfaction scores by 20% Streamlined CI/CD pipelines using Jenkins, Git, and AWS, implementing Agile methodologies and improving continuous integration for distributed systems, which reduced production deployment time by 30%.
- Improved front-end performance for Single-Page Web Applications by optimizing JavaScript, HTML5, and CSS3 code.
- Managed and deployed Salesforce changes using change sets, ensuring seamless updates and minimal disruption to users. Performed data cleansing and deduplication to maintain data integrity and improve reporting accuracy.
- Utilized Salesforce Data Loader for efficient data import and management, ensuring data accuracy and consistency. Improved data import processes, reducing errors by 15%.

PROJECTS

AI Icon Generation SaaS Platform

- Developed a complete SaaS application using React and TypeScript that generates AI icons based on text or URLs using the Hugging Face API.
- Crafted a user-friendly interface with a strong UI and UX focus using React, TypeScript, and Tailwind CSS, leveraging JSON, HTML, CSS, and JavaScript, decreasing user bounce rate by 15% through enhanced design and intuitive navigation for a SaaS application.
- Implemented backend services using Java, REST, and JSON to handle image generation requests and manage API responses, showcasing proficiency in backend development and API integration.
