

LAKSHMI VYSHNAVI VUTUKURI

JAVA FULL STACK DEVELOPER

+1 9714277694

 vutukurilakshmivyshnavi@gmail.com

OBJECTIVE

As an accomplished Java Full Stack Developer with **4+ years** of hands-on experience, my objective is to leverage my expertise in both front-end and back-end development to contribute to the success of innovative projects and organizations.

SUMMARY

Over 4+ years of experience in designing, developing, and deploying web and enterprise applications using **Java/J2EE** technologies. Strong expertise in **reactive programming (RxJava, Vert.x)** and building optimized, event-driven services. Skilled in building scalable solutions using **Spring Boot Microservices, Hibernate/JPA, JDBC, and RESTful services**. Proficient in developing **Spark applications** using **Scala** and **Java**, integrating data from RDBMS and streaming sources. Hands-on expertise in **AWS Lambda, Apache Kafka, Docker, and NoSQL databases** like **MongoDB** and **Cassandra**. Strong front-end development experience with **Angular (4/7/8), React, Bootstrap, JavaScript, HTML5, and CSS3**. Experienced in **SDLC, Agile/Scrum, and TDD** environments. Knowledgeable in **DevOps practices, version control (Git, SVN, CVS), and CI/CD**. Worked with tools and frameworks like **JUnit, Log4j, Maven, EXTJS, Struts, and Groovy/Grails**. Proficient in deploying applications on Tomcat, JBoss, **WebLogic, and WebSphere servers**. Solid database experience with **MySQL, PostgreSQL, Oracle, SQL Server, DB2, and service-oriented architecture (SOAP, WSDL, JMS)**. Exposure to **GenAI and AI-driven automation** for enhancing reporting and data insights.

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, Golang, Kotlin
- **Web Technologies:** HTML5/HTML, CSS3/CSS, Bootstrap 3/4, JavaScript, ES5/ES6, jQuery, React.js, Angular 2/4/6/7, TypeScript, Ajax, JSON, JavaScript (ES6+), Redux, Cypress, Selenium, Accessibility (ADA/WCAG), Responsive design, Cross-browser testing
- **Integration & Legacy Systems:** COBOL (Mainframe integration), Lotus Notes, MuleSoft (API-led connectivity), JMS, Apache Camel
- **Cloud Platforms:** AWS (S3, EC2, ECS, Lambda, SNS, SQS, EMR, VPC, IAM, CloudWatch, Redshift), Azure (ARM, Databricks, Security & Auditing), GCP
- **Java Technologies:** Java 8, 11, 17, Core Java/J2EE (Servlet, JDBC), RxJava, Vert.x, Spring (Framework, WebFlux, Apache Flink, Apache Spark (Core, SQL, Streaming), Security, Hibernate 4, JPA, MVC, AOP), Spring Boot, Java Swing, Restful Web Services (REST), Apache (Maven 3.0, Tomcat 7.0), Microservices, OpenAPI/Swagger, JWT, OpenID
- **Testing & Automation:** Junit, Mockito, Selenium, Cypress, Playwright, Appium, REST Assured, Postman, TDD, Accessibility testing (ADA/WCAG compliance), Performance testing tools, Production validation (monitoring dashboards, log analysis, synthetic testing)
- **Databases:** SQL Server, MySQL, MariaDB, MongoDB, Oracle, DynamoDB, Apache Lucene, Apache Solr, Algolia, Redis, Elasticsearch, OpenSearch.
- **Operating Systems:** Windows, Linux and Unix.
- **GenAI:** Familiarity with Large Language Models (LLMs) and AI API integration for automation and data-driven insights
- **Tools/ IDEs:** Networking, pandas, NumPy, TensorFlow, PyTorch, scikit-learn, regression, classification, clustering, deep learning, Jupyter, Tableau, OpenTelemetry, Prometheus, Influx, Jira, Jenkins, Gradle, Terraform, Docker, Visual Studio Code, Eclipse Enterprise, IntelliJ, ELK, Splunk, Kiali, Jasper Reports, Grafana, RabbitMQ, IBM MQ Series, ActiveMQ, Kibana, Dynatrace, Datadog, SonarQube, Static scan tools Veracode, BI-style reporting, and self-service analytics platforms.
- **Version Controls:** Git, GitHub, Bitbucket.

EDUCATION

Masters in **Computer Science** from Portland State University, Portland, Oregon, USA

WORK EXPERIENCE

Client: Regions Bank, Atlanta, Georgia, USA

Jan 2025 - Present

Role: Java Full Stack Developer

Responsibilities:

- **Develop** cloud-native microservices using Spring Boot, **RxJava**, and **Vert.x**; **deploy on AWS EKS** and integrate with Spring Cloud services.
- Built **Go-based utilities** for log aggregation and performance monitoring, improving system observability and reducing incident response time.
- Created data model for structuring and storing the data efficiently and implemented partitioning and bucketing of tables in **Cassandra**.
- Developed Spark jobs in **Scala** and **Java** for batch and real-time data processing, integrating with **Kafka** and **Cassandra** for high-performance data pipelines.
- Optimized **Spark** jobs use partitioning, bucketing, and caching to reduce processing time for analytical workloads.
- Designed ETL processes using **Spring Batch** and **Apache Spark**, enabling large-scale data ingestion and transformation.
- Design and implement **RESTful APIs** and integrate with third-party **APIs** for data exchange.
- Implemented **OAuth2**, **OpenID Connect**, and **JWT-based authentication** for securing microservices.
- Designed and documented APIs using **OpenAPI/Swagger**, improving cross-team collaboration.
- Used **RabbitMQ** alongside Kafka for reliable message delivery and asynchronous processing between services.
- Used **JMS (Java Message Service)** and **Kafka** for notifications and backend events; integrated **Oracle Golden Gate Kafka adapters** for streaming to Kafka clusters.
- Golden Gate **Kafka** adapters are used to write data to **Kafka clusters**.
- Worked on Server-side **CSS** pre-processing platforms and UI kits, such as **LESS/SCSS**, **Node.js**, foundation and **Bootstrap**.
- Setup **CI/CD** pipeline process for the application using the **Jenkins**.
- Development in extraction, transformation & loading using **Spring Batch** as extracted data are maps, data encryption & decryption.
- Supported microservice authentication service provider using **Java Cryptology Extensions'** Cipher class **API**.
- Provides intermediate level system analysis, design, development, and implementation of UI and MTs for WEB and Batch based software.
- Developed **JASPER** report to show the result after validations are performed on the test cases and maintaining several data accuracy.
- Used tools like **SOAP UI** for testing **SOAP** based Webservices.
- Developed unit testing framework using **JUnit** test cases for continuous integration testing and used **JTest** Tool for performance testing.
- Developed front-end applications using **React**, **Flux**, **NodeJS** and **Docker** and Built **Spring** based **Java** and **Scala** services to support Enterprise Web application.
- Created **UNIX shell scripts** to run the Informatica workflows and controlling the **ETL flow**.
- Worked with **ReactJS** Controllers, Directives, Services, Pipes, Guards. Developed Servlets for server-side transactions and made use of **AJAX** for server-side processing without refreshing **JSP** page.
- Used **Java 8** features like Lambda expressions, **Stream API**, Bulk data operations on Collections which would increase the performance of the Application, facilitate pipeline processing and Method references.
- Developed **REST API's** using **Spring MVC** and **Spring Boot**, hosted all micro services on **PCF**.
- Utilised **Terraform (Infrastructure As Code)** for managing cloud infrastructure and ensuring consistency across various environments
- Worked on **Kubernetes** cluster as a part of deployment activity. Familiar with **Open Shift** commands mainly for deployment. Implemented service methods and **SQL** queries, **PL/SQL** to interact with PostgreSQL database.

Environment: AWS, Bootstrap, Cassandra, CI/CD, CSS, Hibernate, Java, Java 8, Jenkins, Kafka, Kubernetes, Microservices, MVC, Node.js, Oracle, PCF, PL/SQL, React, Scala, Spark, Spring, Spring Boot, Spring Cloud, Spring MVC, SQL, Stream API

Client: Honeywell, Atlanta, Georgia, USA

Jun 2024 - Dec 2024

Role: Java Full Stack Developer

Responsibilities:

- Used **Azure** Resource Manager (**ARM**) features like security, auditing, and tagging to manage resources after deployment.

- Responsible for **Spark** streaming configuration based on type of Input Source Developing business logic using **Scala**. Developing traits and case classes etc. in **Scala**.
- Good Knowledge in developing Express, working with **Microservices** backend with **RESTful**, **GraphQL**, **gRPC** etc. type of services. Used **SDK** such as **Eclipse IDE**, **Toad**, and **SVN** etc. in this project.
- Engaged in various phases of Software Development Life Cycle (**SDLC**) of application like Requirement gathering, Design, Analysis and code development.
- Designed and deployed **data validation services** with high reliability under tight SLAs.
- Worked on **large-scale streaming data sets** integrating Kafka with Spark and Databricks.
- Partnered with cross-functional teams to optimize **data reporting pipelines**.
- Designed and optimized search pipelines using **ElasticSearch** and **Solr** for scalable retrieval of structured and unstructured data.
- Tuned indexing and relevancy scoring in **Lucene** to support business-specific use cases.
- Designing & development of entire validation service to perform data validations on the test cases built on the extracted, transformed, loaded data & working on **Linux** platform.
- Designed and developed **DAO layer** with **Hibernate** standards, to access data from **IBM DB2**.
- Implemented **Spring IOC** for interconnection between modules in our application.
- Developed microservices leveraging **reactive programming principles** to support high-concurrency applications.
- Used **NodeJS**, **React**, and **Backbone.JS MVC** framework for developing the Single Page Application (**SPA**).
- Implemented request and response objects using **SOAP** web services and created routes using **Apache Camel**.
- Done with Unit testing using **JUnit** and **Mockito**.
- Used **EC2** for deploying and testing the lower environments such as Dev, INT and Test and used cloud watch for monitoring.
- Have also worked on **Java 8** along with Cold Fusion and Build **RESTful** web services using **Jax-RS API**.
- Worked on project to retrieve log messages procured from **Kafka** by leveraging **Spark Streaming**.
- Used **Java Servlets**, **JSPs**, **AJAX**, **XML**, **HTML** and **CSS** for developing the Web component of the application.
- Involved in writing **Spring** Configuration **XML**, file that contains declarations and business classes are wired-up to the frontend managed beans using **Spring IOC** pattern.
- Involved in Enhancement of existing application and developed prototype and project layout skeletons using **Angular8**.
- Strong Hands-on experience with **IBM MQ Series**, **Active MQ**, **Kafka** and **JMS** for communication between middleware components.
- Configured **JMS** server setup, DB connection setup & deployed Returned items in **Web Sphere Server**.
- Implemented Web-Services to integrate between different applications internal and third-party components using **SOAP** and **REST** services using **Axis2**, **Kubernetes**.
- Configured batch jobs for data transfer from **MySQL** Production, backups to Disk or NetBackup, and refreshing **QA** database with production data. Also created **YAMEL** files for using a **swagger API** within the UI.

Environment: Angular, Azure, CI/CD, Jira, JMS, Kafka, Kubernetes, Microservices, MQ Series, MySQL, RESTful, Scala, SOA, SOAP, Spark, Spring, Spring IOC, SQL, XML

Client: Bosch, Hyderabad, India

Sep 2022 - Nov 2023

Role: Java Full Stack Developer

Responsibilities:

- Involved in Migrating existing application into **Microservices** architecture using **REST APIs** and **Spring Boot**.
- Created various **MongoDB** collections and wrote services to store and retrieve user data from for the application on devices and used **Mongoose API** to access the **MongoDB** from **Node.js**.
- Used **IntelliJ** for development and debugging **Spring Boot** applications and Used **Git** for version control.
- Implement caching mechanisms to improve application performance using **Spring Cache**.
- Involved in **JUnit** testing, **JSON** parser & maintaining data accuracy. Built applications using **React** with **ES6** which allowed us to render pages on both the client and server using the same codebase, developed web and mobile applications using **ES6** features and frameworks such as **React**, **React Native** and **Redux**.
- Migrated legacy **Lotus Notes** workflows into modern web applications using **React & Spring Boot**.
- Worked with **MongoDB** and **PostgreSQL**; integrated **DB2** data migration processes.
- Implemented caching strategies, **ElasticSearch** search services, and **MuleSoft** connectors for enterprise APIs.
- Developed microservices on **AWS PCF** and **OpenShift**.

- Implement **Java 8** Method References feature to point to methods by their names & implement functional Interfaces.
- Extensive experience in Pivotal Cloud Foundry (**PCF**).
- Implemented **unit testing frameworks (JUnit, Mockito)** to ensure high code quality.
- Worked in **Agile Scrum** teams, participating in sprint planning, estimation, and daily stand-ups.
- Developed automation of Validation service to provide the **JASPER** report based on bean validations, **Spring** validations on test cases. Developed prototype and project layout skeletons using **jQuery, HTML5, and CSS3**.
- Implemented **PostgreSQL** Queries and Triggers using **PostgreSQL** Server. Designed and developed the **ETL** (Extraction Transformation and Loading) solution using the request module and the **OAuth 2.0** protocol.
- Implemented **data validation automation and reporting dashboards** for business stakeholders.
- Enhanced **self-service data platforms** with reusable microservices and APIs.
- Enhanced self-service data platforms by integrating **ElasticSearch** for real-time log and data search.
- Implemented **Solr indexing** services for structured datasets to support reporting and analytics.
- Managing the **OpenShift cluster** that includes scaling up and down the **AWS** app nodes.
- Adopted **AWS Cloud Formation** to automate and manage cloud infrastructure
- Developing **RESTful Web Services** to retrieve data from client side using Micro Services architecture of **Spring Boot** application with **Micro services** performing the Unit testing and basic functional testing with different sets of data.

Environment: AWS, CSS3, Git, HTML5, IntelliJ, Java 8, jQuery, JSON, JUnit, Microservices, MongoDB, Mongoose API, MySQL, Node.js, OAuth 2.0, PCF, React, Redux, RESTful, S3, Spring, Spring Boot, SQL, SQL Server, Web Services

Client: Teradata, Hyderabad, India

June 2020 - Aug 2022

Role: Java Developer

Responsibilities:

- Experience in Object Relational Mapping frameworks such as **Hibernate**. Implemented REST **Microservices** using **Spring Boot**. Generated Metrics with method level granularity and Persistence using **Spring AOP** and **Spring** Actuator. Experienced on **Linux** and **Windows** Virtual servers on **EC2** using chef servers.
- Migrated tables from **SQL Server** to **Cassandra** and written queries in **CQL** for retrieving the data present in **Cassandra** Cluster. Utilized **React** for its efficient data flow architecture to create a lightweight and render efficient web app that searched projects via the **GitHub API** through keywords.
- Supports different markets for alerts and bugs, Analyze and understand fix them.
- Worked on authentication and authorization flows with **JWT and OpenID Connect**.
- Implemented **RabbitMQ** for asynchronous event-driven processing and messaging.
- Migrated SQL Server tables to **Cassandra clusters**, enabling high-performance analytics.
- Migrated SQL Server data into Spark-based pipelines for scalable analytics and reporting.
- Developed **Jasper and BI-style reports** for stakeholders, aligning with data democratization goals.
- Worked with **large-scale data integration and reporting systems**, ensuring scalability and reliability.
- Used **SDK** such as **Eclipse IDE, Toad, and SVN** etc., in this project.
- Have experienced developing web applications using **Bootstrap, Code Mirror, Brackets** and **Ember.js**.
- Developed application using Frameworks **Spring MVC, Spring IOC, Spring AOP** and **Hibernate**.
- Developed test cases using **JUnit** to validate several business rules in the application.
- Implemented configured **Jira** issue tracking software with **Agile** plug-in across all the company functions.
- Used **Java** Messaging Services (**JMS**) for reliable and asynchronous exchange of vital information such as payment status report.
- Developed **JASPER** report to show the result after validations are performed on the test cases and maintaining several data accuracies. Developed Business tier and Presentation tier using **Struts, JSP**. Coding using **JSP, HTML** and **CSS JavaScript** for validation, **Servlets** using **STRUTS** framework, **JDBC**.
- Experience in Design and Development of database systems using Relational Database Management Systems (**RDBMS**) including **Oracle, DB2, MYSQL, NOSQL** and **MongoDB**. Used **JAX-RS servlet** to implement the Restful web services.
- Implemented **core java Multithreading, Collections, Exception Handling**, and **OOP's concepts**.

Environment: Agile, AOP, Bootstrap, Cassandra, core java, CSS, DB2, EC2, Eclipse, Ember.js, Git, GitHub, Hibernate, HTML, Java, JavaScript, JDBC, Jira, JMS, JSP, JUnit, Microservices, MongoDB, MVC, MYSQL, NOSQL, Oracle, RDBMS, React, Servlets, Spring, Spring Boot, Spring IOC, Spring MVC, SQL, SQL Server, Struts, SVN
