

Lakshmi Neelima Krishnagiri

DATAANALYST

North Carolina, USA | (517) 980-9920 | krishnagirilakshmi63@gmail.com | [LinkedIN](#)

SUMMARY

- **Results-driven Data Analyst with 3 years** of experience in **healthcare and financial industries**, demonstrating expertise in predictive modeling, statistical analysis, and data visualization to drive business decisions and improve operational efficiency.
- Skilled in utilizing **Python, SQL, and R** for complex data manipulation, analysis, and automation of data cleaning processes across multiple data sources.
- Advanced knowledge in creating interactive dashboards using **Power BI and Tableau**, transforming complex datasets into actionable insights for stakeholders.
- Strong background in **statistical methods** including **regression analysis, time series forecasting, and A/B testing** to drive data-driven decision-making.
- Expertise in cloud technologies, particularly **AWS**, for secure data storage and efficient data retrieval while maintaining compliance with industry regulations.
- Proficient in implementing data governance protocols and ensuring compliance with regulatory requirements such as **HIPAA** in healthcare settings.

SKILLS

Methodologies: SDLC, Agile, Waterfall

Languages: Python, R, SQL, SAS

IDEs: Visual Studio Code, PyCharm, Jupyter Notebook

Packages: NumPy, Pandas, Matplotlib, SciPy, Scikit-learn, TensorFlow, Seaborn, dplyr, ggplot2, Keras

Visualization Tools: Tableau, Power BI, Advanced Excel (Pivot Tables, VLOOKUP)

Cloud Technology: Amazon Web Services (AWS), Azure

Database: MySQL, SQL Server, PostgreSQL, MongoDB, Oracle

Other Skills: SSIS, SSRS, Machine Learning Algorithms, Probability distributions, Confidence Intervals, ANOVA, Hypothesis Testing, Regression Analysis, Linear Algebra, Advance Analytics, A/B Testing, Data Mining, Data Visualization, Data warehousing, Data transformation, Data Storytelling, Association rules, Clustering, Classification, Regression, A/B Testing, Forecasting & Modelling, Data Cleaning, Data Wrangling, Jira, Git, GitHub

Operating System: Windows, Linux, Mac OS

WORK EXPERIENCE

Data Analyst | Blue Cross Blue Shield, NC

Oct 2023 – Jan 2025

- Developed a comprehensive predictive model to analyze public health data, successfully identifying trends and forecasting potential disease outbreaks, which improved public health response efforts and resource allocation by 25%.
- Analyzed a dataset comprising over 1 million public health records using statistical methods such as regression analysis and time series forecasting to uncover trends, risk factors, and patterns related to disease outbreaks, which informed early intervention strategies and reduced response times by 20%.
- Utilized SQL for complex queries and data extraction from multiple sources, ensuring the accuracy, relevance, and timeliness of datasets for effective predictive modeling.
- Employed Python libraries (Pandas, NumPy) for advanced data manipulation, automating data cleaning processes that enhanced data integrity by 30% through efficient handling of missing values and outliers, thereby increasing the reliability of analytical results.
- Created interactive dashboards in Power BI to visualize key performance indicators (KPIs) related to disease trends and outbreak risks, leading to improved stakeholder engagement and a 30% increase in decision-making efficiency for public health officials.

- Designed and implemented robust predictive analytics models using machine learning techniques (logistic regression, decision trees) to identify high-risk populations, achieving an 85% accuracy rate in predicting disease outbreaks, which facilitated timely public health interventions and reduced potential case counts by 15%.
- Collaborated with over 10 public health officials and epidemiologists to integrate model insights into health response workflows, resulting in a 15% reduction in response times during disease outbreaks and enhancing overall public health preparedness.
- Leveraged Amazon S3 for secure and scalable storage of public health datasets, improving data retrieval efficiency while ensuring compliance with HIPAA regulations to safeguard patient privacy and secure sensitive health information.
- Conducted training sessions for more than 50 public health professionals on utilizing data insights for proactive outbreak management, leading to a 20% increase in adherence to preventive measures and protocols.
- Established protocols for data sharing and access control, ensuring compliance with HIPAA standards for all data handling practices, which helped safeguard patient confidentiality and enhance trust in public health initiatives.

Data Analyst | HCL Tech, India

Dec 2020 – Dec 2022

- Conducted a thorough analysis of the financial effects of supply chain disruptions on overall business performance, quantifying losses and identifying key factors that impact operational efficiency.
- Developed interactive dashboards in Tableau, allowing stakeholders to dynamically explore financial data and gain deeper insights into cost implications and recovery strategies.
- Defined key performance indicators (KPIs) within an OLAP model to monitor essential metrics such as total disruption costs, recovery time, and revenue impact, improving data visibility by 30% and enabling faster decision-making.
- Performed feature engineering to identify and create relevant features from supply chain data, including supplier reliability, lead times, and inventory levels, which enhanced model accuracy and improved prediction reliability by 15%.
- Utilized Python libraries (Pandas, NumPy) for data cleaning and preprocessing, effectively addressing missing values and outliers, leading to a 30% improvement in data integrity and analysis accuracy.
- Developed complex SQL queries for aggregating and summarizing data, calculating key metrics such as average disruption costs and potential lost revenue, thereby enhancing reporting efficiency and reducing data processing time by 25%.
- Established clear objectives for A/B testing to evaluate the financial effectiveness of various mitigation strategies during supply chain disruptions.
- Used Excel to organize and structure financial impact data, creating well-defined tables for easier access and analysis, resulting in a 35% reduction in time spent on data retrieval and preparation for reporting.
- Conducted a cost variance analysis to identify discrepancies between projected and actual costs during disruptions, enabling more precise forecasting and budget adjustments.
- Collaborated with cross-functional teams to generate actionable insights and recommendations, leading to the implementation of effective strategies that reduced the impact of future supply chain disruptions by 15%.

EDUCATION

Michigan State University

Master of Science in Business Data Science & Analysis

East Lansing, MI, USA

Jan 2023 – Dec 2023

ICFAI University

Bachelor in Business Administration

Hyderabad, INDIA

May 2018 – Apr 2021
