

Lalegül Yıldırım

Software Engineering Student
Istanbul, Türkiye
+90 531 872 3874
lalegul_yildirim@hotmail.com
www.linkedin.com/in/laleguly/

AREAS OF EXPERTISE

- Artificial Intelligence & Machine Learning
- Data Science & Analytics
- Computer Vision & Image Processing
- SQL
- TensorFlow / PyTorch
- Python, Java
- Agile & Scrum Methodologies

EDUCATION

Istanbul Health and Technology University
Software Engineering, Undergraduate Student (Expected Graduation: 2026)

PROFESSIONAL EXPERIENCE

Intertech
Istanbul, Türkiye
Artificial Intelligence Intern
01.08.2023 – 05.09.2023

- Collaborated with the team to develop an AI project enabling customers to become bank clients through the mobile application, eliminating the need for in-person visits. Conducted data collection, data labeling, and image processing tasks to support the project's development and implementation.
- Data collection, data processing, machine learning/image processing, team collaboration

Istanbul Health and Technology University
Istanbul, Türkiye
Machine Learning Intern
01.07.24 – 01.08.24

- We developed an AI project using artificial intelligence and deep learning models to facilitate the diagnosis and treatment of skin cancer. Our project, which uses a very large dataset, analyzes images suspected of cancer and provides a diagnosis. I made significant contributions to the project by being involved in the segmentation and classification of the data during this process.
- Data segmentation, data classification, team collaboration, project reporting.

FinansBank
Istanbul, Türkiye
Banking Intern
12.08.24 – 12.09.24

- During this internship in the banking sector, I participate in activities such as branch manager recognition days, team collaboration simulations, and online meetings with managers. We also receive training through the bank's Finarmoni educational platform.

DEVELOPMENT PROGRAMS & TRAININGS

“Yarınlar Seninle Mümkün” Development Program – Sabancı Group

January, 2024 – March, 2024

- This program, consisting of a total of 5 distinct periods, selects only 100 individuals from among thousands of applications for each period. They include students in learning, development, and mentorship programs. Training sessions are provided by instructors, professors, mentors, and general managers within the Sabancı organization.
- High-Performance Computing, Data Science, Digital Transformation, Emotional Intelligence in the Leadership Equation, Emotional Supernova, Modern Software Development Life Cycle and Agile Approaches etc.

Advanced Mobile App Development with Google Flutter – BTK Academy

July, 2023 - August 6, 2023

- Successfully completed a 60-hour advanced training program on Google Flutter in Eskişehir, designed for university students. Acquired skills in developing advanced mobile applications using the Flutter framework. Earned a certificate of completion for the course.

Ford Otosan, Vehbi Koc Foundation and Mikado Sustainable Development Consulting "Gelecek Hayalim" Development Program

July, 2024 – December, 2024

- In this program, I will receive mentorship support, technical training, personal development training, workshops, and English language training over a period of six months.

PROJECTS

CANKURTARAN – Mobile Banking Application (DenizBank)

- **Data Collection & Labeling:** Managed the collection and accurate labeling of large-scale datasets to support AI-driven mobile banking solutions.
- **Image Processing:** Applied advanced image processing techniques to analyze and optimize visual data, enhancing application performance and user experience.
- **Cross-functional Collaboration:** Worked closely with data science and software development teams to ensure seamless integration of data and image processing modules.

Skin Cancer Diagnosis and Segmentation Project – Istanbul Health and Technology University

- **Data Segmentation:** Led the segmentation of large-scale skin cancer datasets, applying advanced masking techniques to achieve precise lesion identification.
- **Data Classification:** Designed, developed, and evaluated machine learning models to classify benign vs. malignant melanomas, achieving high predictive accuracy.
- **Key Achievement:** Built a segmentation model with a 93.56% success rate in lesion detection, contributing to the advancement of AI-driven medical diagnostics.

TUBITAK 2209-B Industrial Collaboration Project – Ongoing (with Farel Plastic Company)

- **AI-based Visual Inspection:** Developing a computer vision system to automate quality control processes on the production line.
- **Machine Learning Pipeline:** Designing and implementing a pipeline for defect detection using image processing and classification models.
- **Data Management:** Responsible for data collection, preprocessing, and model training to distinguish between defective and faultless products.
- **Industry Collaboration:** Working closely with industrial partners and academic supervisors to ensure alignment of technical solutions with real-world production requirements.
