

Lavanya Chapulmadgollu Ramu | Data Analyst

Syracuse, NY | +1 (682)-372-8313 | crlavanya24@gmail.com | [LinkedIn](#)

SUMMARY

Data Analyst with 3+ years of experience leveraging advanced SQL, Python, and Tableau to extract, transform, and visualize complex datasets that drive strategic business decisions. Demonstrated proficiency in architecting and optimizing ETL pipelines and data workflows to ensure data integrity and scalability. Adept at implementing robust data models and automating processes, enabling seamless data accessibility for cross-functional stakeholders.

TECHNICAL SKILL

Programming & Frameworks: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL (Advanced querying), R, JavaScript

Machine Learning & Data Science: Scikit-learn, TensorFlow, Keras, XGBoost, LightGBM

Data Engineering & ETL: ETL Pipeline Development, dbt, Apache Airflow, SSIS, SSRS, Hadoop, PostgreSQL, MySQL, Oracle DB, MS SQL Server, Data Cleaning & Transformation, Data Modeling, Data Warehousing (Redshift, Snowflake, Databricks)

Cloud Platforms & Big Data: AWS (S3, Glue, Lambda, Redshift, Athena), Azure, Oracle Cloud Infrastructure (OCI)

Data Visualization & BI Tools: Tableau, Microsoft Power BI, AWS QuickSight, Looker, Excel (VLOOKUP, Pivot Tables, Macros), MS Access, Alteryx, Talend

APIs & Automation: RESTful APIs, CI/CD Pipelines, Git, GitHub, Azure DevOps, Docker, PowerApps

Soft Skills: Problem Solving, Cross-Functional Collaboration, Communication & Presentation, Agile Methodologies (Scrum/Kanban), Attention to Detail, Best Practice, Stakeholders Management

EXPERIENCE

Data Analyst, Charles Schwab | NY

Jul 2024 – Present

- Automated investment data preparation workflows using Python scripts and AWS Glue, reducing manual processing time and enabling faster delivery of insights for client-facing teams.
- Designed and maintained interactive Tableau dashboards tracking over 50 client portfolio KPIs and investment product metrics, improving visibility and decision-making across marketing, compliance, and portfolio management teams.
- Conducted detailed transaction pattern analysis using Python (Pandas, NumPy) to identify client behavior trends and unusual investment activity, helping to improve risk profiling and portfolio optimization strategies.
- Collaborated with data engineering teams to optimize Redshift queries and warehouse design, leading to a 40% improvement in performance for real-time investment data reporting tools.
- Led data reconciliation efforts across brokerage, retirement, and advisory platforms using advanced SQL, achieving 99.8% data accuracy in client performance reports and enhancing reporting trustworthiness.
- Developed Python-based automation scripts integrated with CI/CD to streamline delivery of analytics dashboards and reporting features, reducing downtime and deployment errors for analytics services.

Data Analyst, Hexaware Technologies | India

Jul 2020 – Dec 2022

- Managed ETL workflows utilizing SSIS and Python for data integration involving over 10 million records monthly, increasing pipeline reliability and throughput and ensuring timely data availability for client reporting needs.
- Executed data cleaning, transformation, and normalization processes for client datasets, significantly enhancing data quality and reducing inconsistencies, which improved downstream analytics outcomes.
- Designed, and deployed interactive Power BI reports and dashboards tailored for multiple client stakeholders, increasing report user satisfaction scores and enabling data-driven decision-making for operational and strategic initiatives.
- Automated complex SQL and Python scripts to perform repetitive data validation and quality checks, reducing manual data processing effort by approximately 35 hours per month, thereby accelerating project delivery timelines.
- Prepared training datasets for machine learning projects by applying feature engineering and selection techniques using Scikit-learn and XGBoost, improving model prediction accuracy and contributed to successful client pilot programs.
- Utilized Hadoop ecosystem tools to process and analyze large datasets efficiently, optimizing data workflows that supported client business intelligence needs and improved data accessibility for non-technical users.
- Implemented SQL query optimization techniques to improve database performance, reducing average query run times by 25%, which enhanced report generation speed and responsiveness for business users.

EDUCATION

Masters in Computer Science

Dec 2024

University of Texas at Arlington | Arlington, Texas

Bachelors in Computer Science

Aug 2022

Visvesvaraya Technological University | Bengaluru, Karnataka, India

PROJECTS

Client Behavior Analytics & Risk Profiling System

- Using Pandas and NumPy to build a Python-based behavioral analytics framework that detect anomalous trading patterns and calculate dynamic risk scores, enabling real-time compliance alerts.
- Optimized Redshift data schemas and materialized views, improving query performance by 40% and accelerating anomaly detection by 25% across 15K+ client portfolios.

ETL Framework for Financial Data

- Developed robust SSIS and Python-based ETL pipelines to extract, transform, and validate financial data from 20+ heterogeneous sources, incorporating automated quality checks for data accuracy.
- Achieved 99.5% pipeline reliability and accelerated monthly data delivery by 8 hours, ensuring timely access to over 10M financial records for downstream reporting.
