

LEELA MUKESH MUTYALAPALLI

📍 Arizona, USA ✉ leelamukesh2000@gmail.com ☎ (928)310-2945 in Leela Mukesh Mutyalapalli

Professional Summary

I am a dedicated Java developer with experience in building efficient and scalable software solutions. With 2 years of experience, Skilled in using frameworks like Spring Boot and Hibernate, I focus on writing clean, maintainable code and optimizing backend systems. I enjoy working in collaborative environments, solving challenges, and continuously learning about new technologies like microservices and cloud computing.

Technologies

Programming Languages: C++, C, Java, JDBC, Hibernate, Springboot

Web Development: HTML, CSS, JavaScript

Database Systems: Oracle SQL, PLSQL, PostgreSQL

Methodologies: Agile, SCRUM

Other Skills: Algorithms, Data Structures

Education

Northern Arizona University

AUG 2023 – DEC 2024

MS in Computer Science

- GPA: 3.56/4.0
- **Coursework:** Data Structures, Algorithms, Large Scale Data Structures

Sri Chandrasekarendra Saraswathi Viswa Maha Vidyalyaya

AUG 2017 – MAY 2021

BE in Electronics and Communication Engineering

- GPA: 8.56/10.0
- **Coursework:** Digital System Design, Embedded System Design, VLSI Design

Experience

Software Developer

Hyderabad, IND

Mavericks Business Market Research

AUG 2021 – JULY 2023

- Gained proficiency in the Agile Framework and other modern Java-based technologies.
- Contributing greatly to increasing the code quality and Agile Estimation and Planning.
- Undertook analysis, design, testing, and bug fixing within a continuous delivery paradigm for software solutions.
- Developed and implemented backend applications using Spring Boot and Hibernate ORM for efficient database connectivity.
- Constructed Java-based parsing tools reducing data extraction time by 25
- Developed and optimized scalable Java applications, focusing on clean code practices and efficient algorithms to enhance performance and maintainability.

Projects

Digital Temperature Sensor Circuit

- The main principle of this circuit is to take the analog temperature values, convert them into digital values and display the digital temperature value on LCD or 7-Segment Display.
- Temperature sensors are widely used in electronic equipment to display the temperature. You can see the digital clock displaying the room temperature value. It is due to the temperature sensor embedded in it. In the project we will describe how a temperature sensor will work and describe its functionalities.
- The digital temperature circuit consists of ATmega8 microcontroller, LM35 temperature sensor.

Sign Language to Speech Using Flex Sensors

- Developed a system that translates sign language gestures into audible speech using flex sensors to detect hand movements and positions.
- Implemented a microcontroller-based solution that processes input from flex sensors attached to fingers, converting gesture data into corresponding phonetic sounds or words.
- Utilized Arduino and speech synthesis technology to enable real-time communication for individuals with hearing impairments.
- Tools Used: Arduino, Flex Sensors, Speech Synthesis, C++

Certifications

- Certificate from **Bharat Sanchar Nigam Limited (BSNL)**, Chennai
- Certificate Course in **Cyber Security and Malware Analysis**, Indian Servers
- Certificate from **JSpiders**, Hyderabad in *Java Full Stack*
