

Leena Nuthalapati

✉ leenanuthalapati09@gmail.com ☎ 816-447-2501 📍 Kansas, MO

Professional Summary

Detail-oriented and motivated Computer Science graduate student with strong proficiency in Python, Java, SQL, and C, complemented by hands-on experience in data analysis, machine learning, and web development. Proven ability to work collaboratively on team-based projects and deliver solutions using Agile methodologies. Eager to contribute to impactful software solutions in a growth-focused organization.

Technical Skills

Languages

Python, Java, C, SQL

Database

MySQL

Libraries & Frameworks

Pandas, Matplotlib, Scikit-learn, Numpy

Machine Learning and Data Science

Supervised Learning (Logistic Regression, SVM, Decision Trees, Random Forest, XGBoost), Model Evaluation (Accuracy, Precision), Feature Engineering, Data Preprocessing, Exploratory Data Analysis (EDA), Time Series Analysis

Web Technologies

HTML, CSS, JavaScript, Flask, Bootstrap

Soft Skills

Problem Solving, Time Management, Decision Making, Attention to Detail

Tools & Platforms

Jupyter Notebook, Excel, PowerPoint, Windows

Education

Master's Degree-Computer Science, *University of Central Missouri*

08/2023 – 05/2025
Lees Summit, MO, USA

Bachelor's Degree-Computer Science and Engineering,
Sreenidhi Institute of Science and Technology

08/2018 – 05/2022
Yamnapet, Hyderabad,
India

Professional Experience

Intern, *Tata Consultancy Services*

03/2022 – 06/2022

Trained in PEGA System Architecture under NSE TalentSprint; gained PCSA and PCSSA certifications.

Hyderabad, India

- Implemented solutions using data modeling, decision rules, and system integrations.
- Applied Agile principles and PEGA best practices in creating scalable applications.

Intern, *GoalStreet*

05/2020 – 07/2020

- Conducted exploratory data analysis (EDA) using Pandas and data visualization via Matplotlib.
- Collaborated on a team to build a data-driven Python application, enhancing team collaboration and version control skills.

Hyderabad, India

Projects

Library Management System

- Developed a full-stack web application with HTML, CSS, JS, Flask, and MySQL to manage book loans and user roles.

University Student Accommodation Management System

- Designed and implemented the database for a University Student Accommodation Management System, handling student records, room assignments, and booking details.
- Utilized SQL and data modeling techniques to ensure efficient storage, retrieval, and management of accommodation data.

Debit Card Approval Process - Micro Bank

- Contributed to the development of a Debit Card Approval Workflow Application using the Pega platform, automating a four-stage process involving customer service, bank executive, manager, and approver review.
- Implemented case routing, data auto-population, and decision logic (approval/resubmission/rejection) to streamline debit card processing and enhance operational efficiency.

Personality Prediction through CV Analysis

- Built a Python-based machine learning model using Logistic Regression to assess job suitability based on resumes and quizzes.

Diabetes Prediction using Machine Learning Algorithms

- Implemented SVM, Random Forest, XGBoost, and Decision Trees to predict diabetes based on medical data.
- Performed feature engineering and evaluated model performance using Jupyter Notebook.

Student Result Management System

- Developed a web-based Student Result Management System that allows secure result access for students and administrative result management including adding/editing classes, subjects, student info, and notices.
- Implemented user-specific dashboards for Admin and Student roles, providing secure login, result publishing, performance tracking, and downloadable reports to improve data accessibility and management efficiency.

Intrusion Detection System using Machine Learning Algorithms

- Developed a Machine Learning-based Intrusion Detection System using Python and Jupyter Notebook, implementing Random Forest, SVM, and Decision Tree algorithms to classify network traffic for security threats.
- Performed data preprocessing, model training/testing, and performance evaluation (accuracy and precision), while collaborating in a 3-member team on research and implementation.

Internship Project - Time Series Analysis

- Analyzed datasets using Python libraries Pandas and Matplotlib on Jupyter Notebook to extract insights and visualize data trends.
- Collaborated in a 3-member team, contributing to coding and the overall development process in a Windows environment.

Certificates

- | | | |
|--|---|-------------------------------------|
| • Introduction to Programming using Python-Hacker Rank | • Introduction to Database System (95%) - NPTEL | • Programming in Java (70%) - NPTEL |
|--|---|-------------------------------------|
