

Limba Reddy Nagulapally | Full Stack Java Developer

limba@mywebemails.com | +1 (515) 454-6532 | USA

Summary

Results-driven Full Stack Java Developer with over 5+ years of experience designing, developing, and deploying scalable web applications and microservices. Skilled in Java, Spring Boot, React.js, and modern front-end and back-end technologies. Strong background in cloud computing (AWS & Azure), CI/CD automation, API development, and secure application architecture. Proficient in containerization, event-driven systems, and real-time data processing. Adept at collaborating in Agile environments, optimizing system performance, and delivering high-quality, maintainable code aligned with business goals.

Technical skills

- Languages & Frameworks:** Java, JavaScript, TypeScript, Spring Boot, Spring MVC, Spring Data JPA, React.js, Redux, Node.js, Protocol Buffers
- Backend & Microservices:** RESTful Web Services, gRPC, Hibernate, JDBC, Model-View-Controller (MVC), Domain-Driven Design (DDD), FIX Protocol, Microservices Architecture, API Gateway
- Frontend:** React.js, Redux, WebSocket, HTML5, CSS3, Bootstrap, Material-UI, Responsive Web Design
- Cloud Platforms & Services:**AWS (EKS, EC2, S3, RDS, MSK, Fargate, CloudWatch, IAM, Lambda, API Gateway, SQS),Azure (App Services, SQL Database, Container Registry, Azure DevOps, Azure Key Vault)
- Containerization & Orchestration:** Docker, Kubernetes, Helm Charts, Amazon EKS, AWS Fargate
- Messaging & Event Streaming:** Apache Kafka, AWS MSK, RabbitMQ, Amazon SQS, Pub/Sub Patterns, Event-Driven Architecture
- Databases & Caching:** PostgreSQL, AWS DynamoDB, Azure SQL Database, MySQL, Redis, MongoDB, HikariCP (Connection Pooling)
- DevOps & CI/CD Tools:** Jenkins, Azure DevOps, Git, GitHub Actions, Maven, Gradle, Terraform, SonarQube, Nexus Repository Manager
- Monitoring & Observability:** Spring Boot Actuator, Prometheus, Grafana, Amazon CloudWatch, ELK Stack (Elasticsearch, Logstash, Kibana), Splunk
- Security & Testing:** Spring Security, JWT, OAuth 2.0, RBAC, OWASP ZAP, JUnit, Mockito, MockMvc, Postman, REST Assured, Selenium, Penetration Testing
- Documentation & API Design:** Swagger (OpenAPI), RAML, Technical Documentation, UML, Sequence Diagrams, API Versioning
- Build & Automation Tools:**Maven, Gradle, NPM, Webpack, Babel
- Other Tools & Concepts:** Agile/Scrum Methodologies, Jira, Confluence, Service-Oriented Architecture (SOA), System Design, TDD (Test-Driven Development), BDD (Behavior-Driven Development), Code Review Practices, Pair Programming

Professional Experience

- Full Stack Developer, Elliott Management

04/2023 - Present | Remote,NY, USA

 - Led requirements gathering sessions with quantitative analysts, traders, and risk management teams to translate complex business needs into technical specifications for a real-time trading analytics platform.
 - Architected and developed the platform on AWS, using a Java Spring Boot microservices backend and a React/Redux frontend, reducing data latency by 35% and achieving 99.9% uptime.
 - Fostered cross-functional collaboration with DevOps and QA teams to design, deploy, and manage scalable microservices on Amazon EKS (Elastic Kubernetes Service), utilizing Docker for containerization and ensuring high availability.
 - Engineered event-driven data pipelines using Apache Kafka on AWS MSK. Integrated a Random Forest ML model for real-time trade anomaly detection, with the model consuming from and publishing alerts to Kafka topics.
 - Designed and optimized PostgreSQL and AWS DynamoDB databases; implemented efficient schema designs, indexing strategies, and connection pooling with HikariCP to handle high-frequency read/write operations.
 - Secured the entire platform using Spring Security with JWT-based authentication and RBAC. Protected AWS S3 data buckets and RDS instances using fine-grained IAM policies.
 - Built dynamic, real-time dashboards with React.js and Redux, integrating with backend services via WebSocket and REST APIs hosted on EKS, improving trader workflow efficiency by 20%.
 - Created comprehensive technical documentation, including API specifications (using OpenAPI), system architecture diagrams, and operational runbooks, which accelerated the onboarding of new team members and improved maintenance clarity.
 - Developed and optimized a low-latency FIX protocol gateway using Protocol Buffers, deployed on AWS Fargate, which halved payload size and significantly enhanced data throughput.
 - Implemented comprehensive monitoring using Spring Boot Actuators, Prometheus, and Grafana on AWS EC2. Streamlined alerting with Amazon CloudWatch to reduce incident resolution time by 40%.
 - Established a robust testing framework, writing JUnit unit tests, MockMvc integration tests, and coordinating penetration testing to validate security.
 - Automated the CI/CD pipeline using Jenkins, with Terraform to provision EKS clusters and related AWS infrastructure, ensuring consistent and repeatable deployments.
 - Utilized Spring Scheduler for automated intraday risk reporting and data aggregation tasks, streamlining critical end-of-day processes.
- Full Stack Developer, MedPlus

06/2019 - 12/2021 | Hyderabad, India

 - Collaborated closely with product managers, business analysts, and pharmacy operations teams in requirement gathering sessions to translate complex business needs and HIPAA compliance mandates into actionable technical specifications and user stories.
 - Architected and developed a full-stack, microservices-based prescription processing platform using Java, Spring Boot, and React with Redux, enabling seamless management of pharmacy workflows and improving system scalability by 50% to handle concurrent user loads.

- Engineered the backend with a domain-driven design (DDD) approach, creating 10+ reusable microservices. Implemented Spring Scheduler for automating critical nightly tasks, including prescription data archival and system health report generation, reducing manual oversight.
- Secured all application endpoints and data access layers using Spring Security with JWT-based authentication. Enforced RBAC (Role-Based Access Control) to ensure strict compliance with HIPAA regulations, protecting sensitive patient health information (PHI).
- Integrated Spring Boot Actuators with Prometheus for comprehensive application monitoring and built Grafana dashboards to visualize metrics, enabling real-time performance tracking and reducing mean time to resolution (MTTR) for production incidents by 30%.
- Fostered effective cross-functional collaboration by leading API specification reviews with frontend teams (React/Redux) and coordinating with QA engineers to define test strategies, ensuring seamless integration and a high-quality user experience.
- Designed and implemented an event-driven architecture using RabbitMQ for asynchronous messaging between microservices, ensuring reliable order status updates and decoupling the OCR processing service from the main prescription workflow.
- Leveraged Azure Cloud Services (Azure App Services, Azure SQL Database, Azure Container Registry) for deployment and management. Automated the entire CI/CD pipeline using Azure DevOps, which included building, unit/integration/penetration testing, and secure deployment, cutting release cycles by 40%.
- Created and maintained comprehensive project documentation, including API documentation (using Swagger/OpenAPI), system architecture diagrams, and operational runbooks for deployment and troubleshooting, which accelerated the onboarding of new team members.
- Established a robust testing strategy employing JUnit and Mockito for unit testing, Postman for API integration testing, and OWASP ZAP for penetration testing to identify and remediate security vulnerabilities, ensuring a highly secure and reliable application.
- Optimized application performance by designing efficient database schemas on Azure SQL, implementing indexing strategies, and writing complex queries, which decreased data retrieval times for large prescription datasets by 25%.

Education	
Master of Science in Computer Information Systems	01/2022 - 03/2023
New England College, NH, USA	
B.Tech in Mechanical Engineering	08/2016 - 10/2020
Gokaraju Rangaraju Institute of Engineering and Technology, Hyderabad, India	

Certifications	
AWS Certified Solutions Architect - Associate	01/2025 - 01/2028
AWS Certified Cloud Practitioner	09/2024 - 09/2027

Projects	
Online Learning Management System	
- Developed a scalable LMS using Java Spring Boot and React, supporting course creation, enrollment, and progress tracking, which enhanced student engagement through interactive quizzes and real-time notifications. - Implemented role-based access with JWT authentication, ensuring secure data access for students, instructors, and administrators while integrating REST APIs for seamless third-party content delivery.	

Smart Home Automation Platform	
- Built a full-stack smart home control system with React frontend and Spring Boot backend, enabling users to manage devices remotely and schedule automated routines using real-time WebSocket communication. - Designed microservices architecture hosted on Docker and Kubernetes, utilizing MQTT for device messaging and secured with OAuth 2.0, enhancing system scalability and user privacy.	

Financial Budgeting and Forecasting Tool	
- Created a budgeting app using React and Spring Boot, providing users with dynamic expense tracking, forecasting algorithms, and visualized reports to improve financial decision-making. - Leveraged PostgreSQL for optimized data storage and employed RESTful APIs for integration with external banking services, ensuring secure and efficient data synchronization.
