SUMMARY

Business Analytics graduate with 3+ years of experience in **digital analytics**, funnel optimization, reporting, and stakeholder insights. Skilled in Tableau, SQL, and R. Proven ability to translate data into actionable strategies through KPI tracking, customer journey analysis, and dashboard development.

EDUCATION

Mercer University, School of Business
Master of Business Analytics

August 2023- May 2025

GITAM School of Technology

May 2020

Bachelor of Technology

Concentration: Computer Science and Engineering

EXPERIENCE

Megatron IT Services

HYDERABAD, INDIA

Jr.Business Analyst

Aug 2021 – June 2023

- Analyzed **e-commerce sales and user engagement** data using SQL and Excel to identify product-level demand trends and **customer journey bottlenecks**.
- Developed time-series forecasting models in Python/R to project **digital conversion trends** and category-level revenue.
- Built **funnel dashboards** in Tableau and Power BI visualizing key metrics like **view-to-cart rate**, **cart abandonment**, **session-level AOV**, and campaign performance.
- Collaborated with cross-functional teams to improve **tracking implementation** and reporting logic, enhancing end-to-end funnel visibility.
- Delivered insights that reduced overstock by 15% and improved stock availability by 20%, enhancing both **digital CX and business KPIs**.

Intern

July 2020 – July 2021

- Supported senior analysts in evaluating transaction-level data from checkout systems to identify process inefficiencies and performance trends.
- Used SQL and Excel to clean and organize sales transaction data, focusing on customer flow, cashier utilization, and peak-time behaviors.
- Created preliminary Tableau reports to visualize checkout time trends, queue length variations, and cashier utilization rates.
- Helped prepare presentation materials and operational summaries to support business process improvements and performance reviews.

ACADEMIC PROJECTS

Mercer University

Date

E-commerce Product Portfolio Optimization:

May 2025

- Analyzed ~885K digital interactions, applying EDA and feature engineering to assess user behavior and optimize online marketing strategies.
- Utilized K-means clustering and regression modeling ($R^2=82.5\%$) to segment products and forecast revenue, guiding strategic decisions.
- Developed predictive analytics models (Random Forest, $R^2=69.1\%$) for conversion rate, identifying high-efficiency products and growth opportunities.
- Conducted scenario simulations to quantify potential revenue uplift, demonstrating strategic opportunities (e.g., 246% growth through targeted cart-addition improvements).
- Recommended actionable marketing, merchandising, and inventory strategies, driving customer engagement and revenue optimization.

E-Commerce Cosmetic Store Analysis

April 2024

- Analyzed over 4.6 million e-commerce transactions to identify top- and underperforming product categories, using EDA and visualizations to guide strategic revenue growth recommendations.
- Applied dimensionality reduction and K-means clustering to segment products by sales performance indicators, supporting targeted marketing and merchandising strategies.
- Cleaned and preprocessed the dataset by handling missing values, outliers, and engineering new variables such as total category revenue for deeper insight and stronger model input.
- Developed an ensemble random forest model with 92.03% accuracy, surpassing the linear regression model's 83% (R-squared) in forecasting category revenue. Evaluated performance using RMSE, MAE, and ME on test datasets for robust validation and comparison against baseline models.

COURSES & CERTIFICATIONS

- **SQL for Data Science** – University of California, Davis (Coursera)
- **MBA Math Certificate** – MBA Math
- **Prompt Engineering** – Code Signal
- Data Visualization & Reporting (Power BI/Tableau-focused coursework embedded in degree)

TECHNICAL SKILLS

Technical & Analytical Skills:

Tableau, SQL, Python, R, Excel (PivotTables & Charts), Data Visualization, Dashboard Development, Regression Analysis, Predictive Modeling, K-means Clustering, Conversion Rate Optimization, Funnel & Behavioral Analysis.

Business & Process Skills:

Requirements Gathering, KPI Tracking, Strategic Planning, Business Process Evaluation, Cross-Functional Collaboration, Market & Trend Analysis, Scenario Simulation, Report Automation

Soft Skills:

Communication & Presentation, Storytelling with Data, Stakeholder Engagement, Critical Thinking, Problem-Solving, Attention to Detail, Time Management
