

LOKESH BORRA

JAVA FULL STACK DEVELOPER

☎ 3512080245

✉ lborra011@gmail.com

OBJECTIVE

To leverage my Over 5+ years of hands-on experience as a Java Full Stack Developer in building scalable, high-performance applications. I am driven by a passion for solving complex problems, collaborating effectively with cross-functional teams, and continuously enhancing my skills with the latest technologies and best practices.

PROFESSIONAL SUMMARY

- Over 5+ years of experience in the IT industry, covering **Java 17/J2EE** enterprise web application development, maintenance, and support across the full SDLC. This includes requirements analysis, design, implementation, reviews, unit testing, integration testing, and production deployments. Proficient in **Terraform scripting for Infrastructure as Code**.
- Strong hands-on experience in the design, development, and implementation of various J2EE frameworks, including **Model View Controller (MVC)**, **Struts**, **Spring**, **Hibernate**, and **EJB**.
- Skilled in Python libraries like **NumPy** and **Pandas**, utilizing them for efficient data manipulation, statistical analysis, and working with large datasets in both development and production environments.
- Developed **Spark applications** using **Scala** and **Java**, and implemented **Apache Spark** data processing projects to manage data from different **RDBMS** and streaming sources.
- Expert in selecting the right **AWS** services based on computing, data, or security requirements and integrating **AWS** with other infrastructure and applications.
- Highly experienced in using **Spring Boot** for quick development of **Microservices** and building cloud-based microservice applications with minimal configuration.
- Developed **Spring Boot Microservices** with **Microservices architecture**, utilizing **REST** and **Apache Kafka**.
- Hands-on experience with **Build & Deployment** phases and using **Continuous Integration (CI/CD)** tools such as **GoCD**, along with monitoring tools like **New Relic** and **Dynatrace**.
- Proficient in applying design patterns like **MVC**, **Singleton**, **Prototype**, **Adapter**, **Visitor**, **Observer**, **Decorator**, **Front Controller**, and **Data Access Object**. Experienced with version control systems like **Git**, **GitHub**, **SVN**, and **CVS**, and tracking systems like **Jira**.
- Extensive experience working with IDEs like **Eclipse** and **Spring Tool Suite**.
- Experience working with **Azure App Services**, deploying and managing web apps, implementing **serverless computing solutions**, and knowledge of **Microsoft Azure SQL Databases** for both relational and non-relational data.
- Well-versed in working within **Agile (SCRUM)** environments and applying **Test-Driven Development (TDD)** methodologies. Proficient in using **Kubernetes** for horizontal scaling and load balancing of applications.
- Designed and developed front-end screens using **Angular**, **HTML**, **CSS**, **JavaScript**, **Redux**, **React**, **jQuery**, **Bootstrap**, and **Spring Boot**. Strong experience with **SQL Databases** such as **MSSQL Server**, **Postgres**, **Sybase**, and **Oracle**.
- Developed and designed **SOAP** and **RESTful web services** using **WSDL**, **SOAP**, **JAX WS**, **JAX-RS**, **CXF**, **AXIS**, **JERSEY**, **REST Template**, and **SOAP UI**.
- Experienced in using **J2EE Application Servers** such as **Apache Tomcat** and **IBM WebSphere**.
- Solid experience in **Java Application Development**, applying **Object-Oriented Concepts**

EDUCATION

Masters from Rivier University,
USA

TECHNICAL SKILLS

- WebTechnologies:**
HTML5/HTML, CSS3/CSS, Bootstrap3/4, Kotlin,
- JavaScript, ASP.NET
ES5/ES6, jQuery, React.js, Angular 2/4/6/7, TypeScript, Ajax, JSON.
- AWS:** S3, EC2, ECS, Lambda, SNS, SQS, EMR, VPC, IAM, Cloud watch, Redshift, API
- Cloud Technologies:** AWS, Azure, GCP(Google Cloud)
- Java Technologies:** Java 8, 11, Core Java/J2EE (Servlet, JDBC), Spring (Framework, Apache Flink, Security, Hibernate 4, JPA, MVC, AOP), Spring Boot, Java Swing, Restful Web Services (REST), Apache (Maven 3.0, Tomcat 7.0), Microservices, Hadoop, Hive, Shadow
- Databases:** SQL, NOSQL, Snowflake, MySQL, MongoDB, Oracle, Cassandra, Redis.
- OperatingSystems:**
Windows, Linux and Unix, MacOS.
- Tools/ IDEs:** Jira, Jenkins, Docker, Visual Studio Code, Eclipse, IntelliJ, ELK.
- Version Controls:** Git, GitHub, Bitbucket, Cloudbees, Jenkins, Sonar.

WORK EXPERIENCE

Client: NielsenIQ , Chicago, USA

Aug 2023 - Present

Role: Java Full Stack Engineer

Responsibilities:

- Involved in setting up the application to run on **AWS cloud** environment on multiple **EC2 instances**. Created event-driven jobs using **AWS cloud tools** like **S3**, **DynamoDB**, **SNS**, **SQS**, and **AWS Lambda** with **Java**.
- Implemented **Hibernate** along with annotation-based transactional support in **Spring Framework**.
- Strong experience in implementing **Spark Streaming** project, preferably using **Scala**, and **Spark SQL**.
- Used **MS360 Framework** to extract the **JSON** file for **Microservices**.
- Implemented **key spaces, tables, and indexes** in **Cassandra** database to suit application needs.
- Expertise in **Apache Kafka** message implementations and their integrations with the systems.
- Worked on server-side **CSS** pre-processing platforms and UI kits, such as **LESS/SCSS**, **Node.js**, and **Bootstrap**.
- Behaviour-Driven Development (**BDD**) implementation with **Cucumber Gherkin** and **Jenkins** for Continuous Integration and Continuous Delivery patterns (**CI/CD**).
- Implemented **Redis caching** strategies to optimize database performance, reducing query response times by **40%**.
- Supported **Kronos WFM** application deployments and troubleshooting across **North America**, ensuring seamless **go-live** activities.
- Worked on **Oracle 9i**, **MySQL**, and experience with SQL like **Oracle**, **MongoDB**, **CouchDB**.
- Integrated the application with **Spring Framework** for implementing **dependency injection**, providing abstraction between **presentation** and **persistence** layers.
- Proficient in **C++**, **C#**, and **.NET** for backend development, with strong expertise in **React.js** for creating dynamic and responsive front-end applications.
- Developed and implemented automated test scripts using **Bash**, **PowerShell**, **Python**, and **Selenium** to streamline the testing process, reducing manual effort by **40%** and increasing test coverage for critical application features.
- Designed and maintained a suite of automated tests for **API** and integration testing using tools like **Postman** and **pytest**, ensuring early detection of bugs and improving overall product stability.
- Experience with **UKG/Kronos** for workforce scheduling, time-tracking, and efficiency monitoring, aligning with business needs and optimizing resource allocation.
- Implemented workforce analytics from **Kronos/UKG** to track operational trends, improve staffing decisions, and enhance productivity across multiple departments.
- Defined and tracked actionable **KPIs** to measure business performance, resulting in a **20%** improvement in decision-making efficiency.
- Experienced in managing and deploying **AWS cloud infrastructure**, leveraging services like **RDS** for database management, **IAM** for access control, and **Secrets Manager** for secure data handling.
- Skilled in using **CloudWatch** and **Alarms** for monitoring, **Route53** for **DNS**, **CloudFront** for content delivery, **S3** for hosting, and **ALB/ELB** for load balancing to ensure **high availability** and scalability.
- Designed and maintained detailed project documentation and workflows in **Confluence**, streamlining team collaboration and improving project delivery timelines.
- Experience building integrated solutions with **SaaS platforms** such as **Salesforce**, **Workday**, **NetSuite**.
- Skilled in **Python**, **Django**, and **Django Rest Framework** for building scalable backend applications and **APIs**.
- Experienced in backend development with strong command over frameworks such as **Node.js**, **PHP**, and **Ruby on Rails** for versatile web solutions.
- Utilized **JTA/JTS** to handle transaction management across multiple resources in **Java**.
- Used **Java 8** features like **Lambda expressions**, **Stream API**, **Bulk data operations** on **Collections**, which would increase the performance of the Application, facilitate **pipeline processing**, and **Method references**.
- Extensively used **Jenkins** as Continuous Integration tool to deploy **Spring Boot Microservices** to **Pivotal Cloud Foundry (PCF)** using **build pack**.
- Experienced in **Solution Architecture** and **Development Design**, with expertise in implementing **transaction load balancing** for optimized system performance and scalability.
- Strong background in the principles of **Android development**, with proficiency in contemporary frameworks like **Jetpack Compose** and **Flows** for creating user-friendly and responsive apps.
- Proficient in **Java** and **Kotlin**, using both languages to create and deploy reliable **Android apps** with smooth operation and an effective code structure.
- Utilized **Splunk** for real-time data monitoring and log analysis, enabling data-driven insights and efficient troubleshooting across systems.
- Designed and optimized data workflows using **SAS** and **Teradata**, ensuring seamless data integration, analytics, and reporting for business-critical applications.

- Services are migrating to **Camel** and deploying to **Kubernetes** cloud environment using **CI/CD pipeline**.
- Worked on **Oracle 9i**, **MySQL**, and experienced in **Software Design**.
- Proficient in **Python**, **statistics**, and advanced **AI techniques**, including **LLMs**, **computer vision**, and **data visualization**
- Skilled in **data storytelling** and visualization using tools like **Tableau** and **Power BI**.
- Automated data processing workflows in **R** to optimize reporting efficiency, reducing turnaround time by **30%**.
- Strong understanding of **NLP**, **text mining**, and **large language models** for **text analytics**.
- Experienced in developing and deploying **AI models** with **TensorFlow** and **Databricks**. Knowledge of **Procore**, **NetSuite**, **UKG**, and **Agile methodologies**.
- Developed and documented product features and ensured seamless system integration while adhering to industry compliance standards.
- Leveraged expertise in technical writing to create detailed documentation for operating systems and integrated systems workflows.
- Proficient in operating systems with strong verbal and written communication skills, and experience working with open-source technologies.

Environment: AWS Lambda, BDD, Bootstrap, Cassandra, CI/CD, CSS, DynamoDB, Gherkin, Hibernate, Java, Java 8, Jenkins, Kafka, Kubernetes, Microservices, MySQL, Node.js, Oracle, Oracle 9i, PCF, React, React Flux, S3, Scala, Spark, Spark SQL, Spring, Spring Boot.

Client: Otto, Chicago, USA.

Oct 2022 - Aug 2023

Role: Java Full Stack Developer

Responsibilities:

- Engineered scalable enterprise applications using **Java 17**, **Spring Boot**, and **Hibernate**, following Microservices architecture to ensure modular and maintainable codebases.
- Designed and implemented secure, RESTful APIs and SOAP web services with **JAX-RS**, **JAX-WS**, **Apache CXF**, and **Jersey** for system interoperability.
- Automated cloud infrastructure provisioning on **AWS** using **Terraform**, ensuring repeatability and compliance through Infrastructure as Code (IaC).
- Deployed microservices to **AWS EC2**, **Lambda**, and **S3**, as well as **Azure App Services and Functions**, enabling hybrid and serverless deployments.
- Built **event-driven architectures** with the **Axon Framework**, incorporating **CQRS** and **Event Sourcing** to decouple components and improve scalability.
- Integrated **Apache Kafka** and **RabbitMQ** for asynchronous communication and real-time data streaming across distributed systems.
- Developed high-performance data pipelines with **Apache Spark (Scala/Java)** to process structured and unstructured datasets from RDBMS and streaming sources.
- Utilized **Python (NumPy, Pandas)** for ETL processes, data transformation, and statistical analysis to support backend analytics features.
- Crafted dynamic, responsive UIs using **React**, **Angular**, **Redux**, **JavaScript**, **HTML5**, and **CSS3**, enhancing the user experience across devices.
- Applied visual design and prototyping with **Figma**, implementing modern layouts using **Flexbox**, **Bootstrap**, and **Tailwind CSS**.
- Delivered feature-rich applications using **Next.js**, **Nuxt.js**, and **Vue.js**, supporting SSR and SEO optimization.
- Built and maintained CI/CD pipelines with **GoCD** and **GitHub Actions**, reducing deployment times and ensuring build consistency.
- Monitored application performance using **New Relic** and **Dynatrace**, identifying bottlenecks and improving system reliability.
- Managed scalable containerized applications using **Kubernetes**, employing **horizontal pod autoscaling** and **load balancing** strategies.
- Worked with **relational and NoSQL databases** including **MSSQL Server**, **PostgreSQL**, **Oracle**, and **Sybase** to support various storage needs.
- Applied software design patterns like **MVC**, **Singleton**, **Adapter**, and **Decorator** to build maintainable and flexible application architectures.

Environment: Java 17, Spring Boot, Microservices, Kafka, Apache Spark, React, Angular, AWS, Azure, Terraform, Kubernetes, Jenkins, PostgreSQL, MongoDB, GitHub Actions.

Client: RJP Infotek, Chennai, INDIA

June 2020 - July 2022

Role: Java Full Stack Developer

Responsibilities:

- Developed and maintained enterprise web applications leveraging **Java 17**, **Spring Boot**, **Hibernate**, and **Microservices architecture**.

- Created **RESTful APIs** and **SOAP web services** using **JAX-RS**, **JAX-WS**, **CXF**, and **Jersey** to ensure seamless system integration.
- Utilized **Terraform** to implement **Infrastructure as Code (IaC)** for provisioning cloud infrastructure on **AWS**.
- Deployed and managed **microservices** on both **AWS** and **Azure App Services**, utilizing **EC2**, **S3**, **Lambda**, and **Azure Functions** to achieve serverless architectures.
- Implemented event-driven **microservices** with **Axon Framework**, incorporating **CQRS** and **Event Sourcing** for enhanced scalability and decoupling.
- Managed real-time data streaming with **Apache Kafka** and handled message queuing across systems with **RabbitMQ**.
- Built and optimized **data pipelines** using **Apache Spark** (Scala/Java) to process large datasets from both **RDBMS** and **streaming sources**.
- Leveraged **Python** libraries like **NumPy** and **Pandas** for efficient data analysis, ETL, and statistical operations.
- Developed responsive **user interfaces** with **Angular**, **React**, **Redux**, **HTML5**, **CSS3**, **JavaScript**, and **Bootstrap**.
- Experienced in CMS management and creative design with **Figma**, crafting responsive layouts with **Flexbox**.
- Skilled in **Next.js**, **Nuxt.js**, and **Vue.js** for creating dynamic, scalable web applications.
- Established **CI/CD pipelines** with **GoCD**, automating build, test, and deployment workflows for faster delivery cycles.
- Utilized **New Relic** and **Dynatrace** for real-time application monitoring and bottleneck identification.
- Managed containerized applications using **Kubernetes**, optimizing performance with **horizontal scaling** and **load balancing**.
- Worked with relational and non-relational databases like **MSSQL Server**, **PostgreSQL**, **Oracle**, and **Sybase**.
- Applied design patterns such as **MVC**, **Singleton**, **Prototype**, **Adapter**, and **Decorator** to develop scalable and maintainable systems.
- Proficient in **version control** using **Git**, **GitHub**, **SVN**, and **CVS**, and collaborated in **Agile (SCRUM)** teams via **Jira**.
- Deployed applications on **Apache Tomcat** and **IBM WebSphere** application servers.
- Followed **Test-Driven Development (TDD)** practices, ensuring quality through unit testing with **JUnit** and **Mockito**.
- Developed and integrated **Microservices** to support enterprise-level software delivery, ensuring seamless backend operations.
- Designed **MongoDB collections** and created services for data storage and retrieval in **Node.js** applications.
- Used **IntelliJ** for developing and debugging **Spring Boot** applications and leveraged **Git** for source control.
- Implemented **Elasticsearch** for enhanced search functionality and faster querying of large datasets.
- Designed distributed, **event-driven architectures** to improve system performance through asynchronous event handling.
- Updated and maintained **Kronos WFM** applications, fixing critical issues and introducing new features to improve functionality.
- Wrote unit tests with **JUnit** and **Mockito** to ensure high code quality and comprehensive test coverage.
- Designed and developed **React**-based web pages from scratch, ensuring a modern and responsive user experience.
- Utilized **Java 8 Lambda Expressions** and **Stream API** to simplify collection handling and improve code readability.
- Configured **Bamboo** for application deployment on **Cloud (PCF)** and integrated with **GitHub** for version control.
- Automated **Validation services** for generating **JASPER reports**, using **Spring** validation frameworks.
- Developed data-accessible web applications using **HTML5**, **CSS3**, and **Node.js** to enable employee access.
- Authored several **shell scripts** and worked with **MySQL** and **SQL Server** for data validation and transformation.
- Developed, optimized, and maintained **WordPress websites**, ensuring improved performance, scalability, and user experience.
- Applied **Kotlin** for building efficient, modern backend and Android applications with **Java interoperability**.
- Enhanced **WordPress** security, SEO, and accessibility compliance through best practices and customizations.
- Built **RESTful web services** using **Node.js** for backend operations, handling requests from the front end via **jQuery Ajax**.
- Created dynamic dashboards and visual reports with **Power BI** and **Tableau**, enabling data-driven decision-making.
- Developed data visualization tools to track key metrics and performance indicators, presenting insights effectively to leadership teams.
- Automated infrastructure provisioning and deployment workflows using **Terraform**, **Kubernetes**, and **cloud-native solutions** (AWS, Azure).
- Gained experience in **Go (Golang)** to build internal tooling and support microservice architectures, improving overall team productivity.

Environment: Angular, Apache Kafka, Azure, Jenkins, JMS, JSON, Kafka, Microservices, MVVM, MVC, Node.js, OAuth, React, RESTful, Spark, Spring, Spring Boot

Client: RJP Infotek, Chennai, INDIA

May 2019 - June 2020

Role: Backend Software Engineer

Responsibilities:

- Utilized the **Dependency Injection** feature of the **Spring Framework**, writing database integration code using **Hibernate**, and employed **Spring AOP** to manage exceptions effectively.
- Acted as a key senior developer in the development of next-generation **Microservices**.
- Gained experience working with **Linux** and **Windows Virtual servers** on **EC2**, leveraging **Chef servers** for configuration management.
- Collaborated on the design and implementation of **end-to-end solutions**, integrating **Cassandra** and **Java** for efficient data handling.
- Leveraged **React JS**'s efficient data flow architecture to build a lightweight and responsive web application for searching GitHub projects via keywords using the **GitHub API**.

- Analyzed system diagnostics with **Splunk**, troubleshooting and resolving **Kronos WFM** outages to ensure operational continuity.
- Proficient in using **UKG/Kronos systems** for workforce management, including **employee scheduling**, **time tracking**, and **payroll management**, ensuring accuracy and efficiency.
- Expertise in deploying enterprise applications on **IBM WebSphere Application Server**, ensuring secure and scalable performance of **J2EE applications**.
- Deployed and managed applications on **Kubernetes** and **AWS cloud platform** services for high availability.
- Managed and resolved issues using **Jira bug tracking** application and led the development of the strategic **RBAC framework**.
- Developed **REST Microservices** using **Java JDK 1.8**, **Scala**, on the **IntelliJ** platform, integrating with **Oracle**.
- Implemented lightweight **WADL (Web Application Description Language)** to enhance the understanding of **RESTful web services** and their configurations.
- Extensive experience in developing **Microservices** using **Spring frameworks**, employing **domain-driven design** principles.
- Involved in **JUnit testing**, using **JSON parsers**, and maintaining **data accuracy** for robust application performance.
- Experience in the **Analysis, Design, Development**, and **Testing** of applications following **Agile methodology**.
- Used **Java Message Service (JMS)** to enable communication between application components for creating, sending, receiving, and reading messages.
- Developed **JASPER reports** to display results after performing validations on test cases, ensuring data accuracy.
- Proven expertise in implementing effective **file handling techniques** to streamline data transformation and backend system integration.
- Configured and utilized **Apache Log4J** for logging and debugging purposes to ensure system reliability.
- Developed **Spring RESTful web services** to deliver **XSD, XML**, and **JSON** content using **Jersey Spring** implementation.
- In-depth expertise in **Core Java**, including concepts such as **Multithreading**, **Synchronization**, **Collections**, and **Event/Exception handling**.
- Designed and implemented scalable **data structures** and **pipelines** to optimize **data engineering workflows**, ensuring seamless integration with cloud platforms.
- Collaborated with **Back of Stores (BOS)** scrum teams to deliver **Kronos WFM** development and deployment solutions.
- Provided **production support** for machine learning models in live environments, adhering to **test-driven development** principles and optimizing performance across operating systems.
- Conducted analysis on **derivatives** to ensure seamless product delivery, working closely with cross-functional teams to meet deadlines and objectives.
- Performed thorough **quality assurance testing** to ensure product standards and enhance the delivery of **financial and technical solutions**.
- Designed and implemented **efficient algorithms** to meet customer needs, integrating solutions into the development lifecycle for optimal performance.
- Applied **machine learning techniques** to develop predictive models, ensuring they align with customer requirements and lifecycle best practices.

Environment: Agile, AOP, Cassandra, EC2, Git, GitHub, Hibernate, IntelliJ, Java, Jira, JMS, JSON, JUnit, Microservices, Oracle, React, RESTful, Scala, Spring, XML.
