

Lokesh Pattabathuni Java Developer

lokesh@techcareemail.com | (813-893-3908) | USA | [LinkedIn](#)

Summary

Experienced Java Developer with 4+ years of experience in designing and implementing scalable, secure microservices using Spring Boot, reactive programming, and modern Java features like virtual threads and pattern matching. Proficient in RESTful API development, containerization with Docker, and cloud deployments on AWS and Azure. Skilled in CI/CD automation, monitoring, and security practices including OAuth2 and JWT. Strong collaborator with frontend teams to enhance user experience and streamline integrations.

Technical Skills

- **Programming Languages:** Java (modern features: virtual threads, records, pattern matching), SQL Python, Kotlin
- **Frameworks & Libraries:** Spring Boot, Spring Cloud, Spring Authorization Server, Jakarta EE, React, Spring AI
- **API Development:** RESTful APIs, Reactive APIs, OpenFeign, OpenAPI/Swagger, Spring MockMvc, Graph QL
- **Databases:** PostgreSQL, MySQL, Redis
- **Messaging & Event Streaming:** Kafka, Azure Event Hubs, MQTT, RabbitMQ
- **Cloud & Containerization:** AWS ECS, Azure Kubernetes Service (AKS), Docker
- **CI/CD & Automation:** Jenkins, GitHub Actions, Azure DevOps, Tekton
- **Monitoring & Logging:** AWS CloudWatch, ELK Stack, Prometheus, Grafana, OpenTelemetry
- **Security:** OAuth2, JWT, RBAC, SonarQube, Snyk
- **Build & Performance Tools:** GraalVM
- **Development Practices:** Agile, DevSecOps, Code Reviews, Unit & Integration Testing (JUnit)

Professional Experience

Java Developer, UBS Wealth Management

05/2024 – Present | Remote, USA

- Worked on enhancing client portfolio analytics by migrating batch processes to reactive Spring Boot microservices, collaborating with product managers, architects, and QA to gather requirements and document specs in Confluence while following Agile practices.
- Refactored backend logic using modern Java features like virtual threads, records, and pattern matching to simplify code and boost efficiency. Collaborated with React frontend developers to integrate APIs and improve user experience in analytics dashboards.
- Developed RESTful and reactive APIs integrating PostgreSQL and Redis caching. Used OpenFeign for microservice communication, maintained Swagger/OpenAPI documentation, and wrote unit and integration tests for robust delivery.
- Implemented secure authentication and authorization using Spring Authorization Server with OAuth2, JWT, and RBAC to enforce strict access controls across wealth management microservices.
- Supported Docker containerization and AWS ECS deployment. Contributed to CI/CD pipeline automation via Jenkins and GitHub Actions and integrated centralized logging and monitoring with AWS CloudWatch, ELK Stack, and Prometheus-Grafana.
- Ensured high code quality and security compliance through code reviews and by using SonarQube and Snyk for vulnerability detection, aligning with UBS's audit standards.

Java Developer, The Cigna Group (India)

08/2020 – 12/2021 | Hyderabad, India

- Crafted a claims and provider management system to automate pre-authorizations, approvals, and reimbursements across healthcare workflows supporting compliance, scalability, and Cigna's operational processes tailored to the Indian insurance and healthcare ecosystem
- Designed distributed microservices using Spring Boot, Spring Cloud, and Jakarta EE applying modular architecture, clean coding practices, and secure APIs for seamless data flow across claim routing, provider onboarding, and audit logging systems
- Integrated Kafka and Azure Event Hubs for real-time claim updates and provider notifications enabling smooth asynchronous processing while using Open Telemetry for end-to-end monitoring and improved observability across service interactions
- Developed FHIR-based interfaces and integrated with SAP for financial reconciliation and provider payments ensuring accurate medical billing through Spring Data JPA, PostgreSQL, and efficient transaction management strategies across all modules
- Collaborated with frontend teams using React by designing REST APIs with OpenAPI standards and mocking endpoints with Spring MockMvc resulting in faster development cycles and reduced API integration issues across mobile and web apps
- Used Docker for containerization and deployed microservices on Azure Kubernetes Service automating CI CD pipelines with GitHub Actions and Azure DevOps and improved performance of key services by compiling them using GraalVM.

Jr. Developer, The Cigna Group (India)

07/2019 – 07/2020 | Hyderabad, India

- Assisted in building a member portal backend for viewing policy details and claim status using Spring Boot, REST APIs, and MySQL while learning team workflows and agile development practices.
- Supported integration testing and API debugging using Postman and JUnit, created basic documentation, and helped improve data validation logic to reduce user errors in online claim submission forms.

Projects

Smart Parking System:

Developed a Java-based IoT-enabled parking system using Spring Boot and MQTT for real-time slot tracking, integrated with Google Maps API and MySQL for location-based availability and booking management.

Personal Finance Tracker:

Built a web application using Java, Spring Boot, and React to manage budgets, categorize expenses, visualize spending trends with charts, and store user data securely using JWT and PostgreSQL.

Education

Master Degree in Information Technology
Trine University

01/2022 - 12/2023
Angola, IN, USA

Certificate

[Cisco Certified Network Associate](#)
