

LOKESHWAR KOTHA

Product Analyst

lokeshwar.ast@gmail.com | 872-285-4352 | IL

SUMMARY

Product Analyst with 4 years of experience in data analytics, product lifecycle management, and business intelligence. Skilled in SQL, Python, and R, with expertise in data visualization tools such as Power BI, Tableau, and Looker, as well as cloud platforms including AWS, Google Cloud, and Azure. Proficient in Agile methodologies, A/B testing, API integrations, and automation using Continuous Integration/Continuous Deployment (CI/CD) tools. Strong background in database management, KPI optimization, and UX research to enhance product performance. Passionate about leveraging data-driven insights to inform product strategy and to improve user experience.

SKILLS

Methodologies: Agile, Scrum, Waterfall

Data Analysis: SQL, Python (Pandas, NumPy), R

Data Visualization: Tableau, Power BI, Looker, Google Data Studio

Product Analytics Tools: Amplitude, Mixpanel, Google Analytics, Heap

A/B Testing & Experimentation: Optimizely, VWO

Database Management: MySQL, PostgreSQL, BigQuery

Statistical Analysis: Hypothesis Testing, Regression Analysis, Cohort Analysis

Machine Learning Basics: Predictive Modeling, Clustering

Excel/Google Sheets: Advanced Formulas, Pivot Tables, Macros

Project Management Tools: Jira, Trello, Asana

EDUCATION

Master of Science in Management Information Systems

University of Illinois Springfield, Springfield, IL — May 2024

Bachelor of Technology in Mechanical Engineering

AVN Institute of Engineering and Technology, College in Ramdasapally, Telangana – Sep 2020

EXPERIENCE

JPMorgan Chase & Co., IL

Product Analyst | Nov 2023 – Current

- Leveraged SQL and BigQuery to extract and interpret large datasets, driving data-informed product enhancements.
- Crafted interactive Tableau dashboards to track key performance indicators (KPIs), such as user engagement and conversion rates, for stakeholder evaluation.
- Developed risk assessment models to evaluate the performance of financial products, resulting in a 15% reduction in exposure.
- Analyzed transaction data trends to enhance fraud detection algorithms, improving security for digital banking products.
- Orchestrated A/B tests via Optimizely to validate feature rollouts, resulting in a 12% increase in conversion rates.
- Conducted hypothesis testing and regression analysis to identify key factors influencing customer retention.
- Coordinated cross-functional initiatives through Jira, uniting engineering and marketing on sprint deliverables.
- Streamlined monthly reporting using Python (Pandas), saving 20 hours of manual work per quarter.
- Monitored user behavior using Google Analytics to provide UX recommendations that optimized user flow.

Orion Technolab, India

Product Analyst | Jan 2019 – Dec 2022

- Developed predictive models in R to forecast customer churn, resulting in a 15% reduction in attrition through targeted interventions.
- Formulated real-time Power BI dashboards to illustrate product performance metrics for executives.
- Performed cohort analysis to gauge long-term user engagement and identify high-value segments.
- Deployed VWO for multivariate experimentation, resulting in an 18% increase in landing page sign-ups.
- Assembled ETL pipelines in PostgreSQL to unify data from multiple sources.
- Partnered with teams using Trello to prioritize product backlogs and oversee feature progress.
- Utilized clustering methods to segment users for personalized marketing outreach.
- Investigated funnel attrition with Mixpanel, refining checkout flows to boost completions by 10%.
- Expedited data operations in Google Data Studio, boosting reporting efficiency for stakeholders.

PROJECTS

Conversion Rate Optimization (CRO) Initiative

- Led A/B testing using Optimizely to evaluate feature rollouts, resulting in a 12% increase in conversion rates by refining UI/UX elements.
- Designed Tableau dashboards to track key performance indicators (KPIs), including engagement and conversion, and presented insights to stakeholders, driving data-driven product decisions.
- Automated monthly performance reports using Python (Pandas), resulting in a 20-hour reduction in manual effort per quarter.

Premium Plan Upsell Propensity Model

- Developed a machine learning model (Python/Scikit-learn) to predict upsell opportunities, resulting in a 18% increase in premium plan upgrades.
- Integrated Snowflake pipelines to streamline data collection, improving data freshness from 24 hours to near real-time.
- Created Looker dashboards to visualize upsell trends, resulting in over 25 hours of monthly manual reporting savings for leadership.
