

Lucky Varma
PH#: +1 3305545995
Email: luckyvarmak3@gmail.com

Summary:

- Accomplished Data Engineer with over 3+ years of experience designing, building, and optimizing scalable data pipelines and platforms across cloud-native environments including Azure and AWS.
- Expertise in big data processing using PySpark, Spark-SQL, and Databricks, with a proven track record of reducing processing times and enhancing data reliability.
- Strong proficiency in data modelling, ETL development, and implementing Dimensional Models (SCD Type 1 & 2) to support enterprise reporting and analytical needs.
- Hands-on experience with streaming data pipelines, real-time processing using Databricks Streaming Tables, and building event-driven architectures for timely data insights.
- Well-versed in data governance, including implementation of Unity Catalog, metadata management, lineage tracking, and regulatory compliance such as HIPAA.
- Demonstrated ability to orchestrate workflows using Apache Airflow, AWS Step Functions, and CI/CD pipelines for robust, fault-tolerant data delivery and automation.
- Adept in data warehousing solutions such as Snowflake, Redshift, and Hive, ensuring optimal performance through query tuning, indexing, partitioning, and bucketing.
- Collaborative and agile team player with experience working in cross-functional teams to translate business requirements into reliable data solutions using Power BI and Tableau.
- Experienced in implementing Data Mesh principles to promote decentralized data ownership and reusable data products across domains.
- Committed to data quality, validation frameworks, and monitoring practices to ensure high data integrity and operational reliability in production environments.

Technical Skills:

Cloud Platforms: Azure (Data Factory, Databricks, Data Lake), AWS (S3, Lambda, Step Functions)

Data Engineering & ETL: PySpark, Spark-SQL, SQL, Python, Databricks, Azure Data Factory (ADF), Snowflake, Redshift, Delta Live Tables

Data Warehousing & Modelling: Snowflake, Amazon Redshift, Hive, Dimensional Modelling (SCD Type 1 & 2), Data Lakes, Data Marts

Workflow Orchestration: Apache Airflow, AWS Step Functions, Jenkins

Streaming & Real-Time Processing: Databricks Streaming Tables, Delta Lake, Event-Driven Pipelines

Business Intelligence & Reporting: Power BI, Tableau

Data Governance & Compliance: Unity Catalog, Data Cataloging, Metadata Management, Data Lineage, HIPAA Compliance

Version Control & CI/CD: GitHub, Jenkins, CI/CD Automation

Performance Optimization: Partitioning, Bucketing, Cluster Tuning, Query Optimization, Resource Monitoring

Methodologies & Practices: Agile/Scrum, Data Mesh, Data Validation Frameworks, Trend Analysis

Professional Experience:

Appian Corporation – Austin, TX
Data Engineer

March 2024 – Present

Responsibilities:

- Designed and developed scalable data engineering pipelines using Azure Data Factory (ADF) and Databricks, enabling efficient data ingestion, transformation, and orchestration across multiple domains.
- Built and optimized large-scale ETL workflows with PySpark and Spark-SQL, facilitating high-performance processing of structured and semi-structured data from diverse sources.

- Implemented Delta Lake architecture using Delta Tables and Delta Live Tables (DLT) for reliable, ACID-compliant streaming and batch data pipelines.
- Developed and maintained Slowly Changing Dimensions (SCD) Type 1 & Type 2 in data warehouse models to support accurate historical tracking and real-time analytics.
- Integrated data across platforms using Snowflake for cloud-native warehousing, ensuring fast query performance and secure data access across teams.
- Contributed to Data Mesh architecture by enabling decentralized data ownership and standardized data products across business units.
- Applied Data Governance principles to enforce data quality, lineage, and cataloging using Azure-native tools and best practices.
- Built interactive dashboards and data models in Power BI, empowering stakeholders with actionable insights and self-service analytics.
- Developed robust SQL-based logic for data cleansing, validation, and transformation within both Databricks and Snowflake environments.
- Deployed and monitored end-to-end data pipelines in Azure Cloud, leveraging scalable infrastructure for efficient ETL operations and cost optimization.
- Collaborated cross-functionally with analytics, DevOps, and product teams to ensure alignment between business requirements and data engineering deliverables.

Environment: Azure Data Factory, Databricks, PySpark, Delta Tables, Snowflake, Data Mesh, SCD Type 1 & Type 2, Delta Live Tables, Power BI, Spark-SQL, Data Governance, SQL, Data Engineering Pipelines, Azure Cloud, ETL Development.

Satinos LLC – Hyderabad, India

June 2022 – July 2023

Data Engineer

Responsibilities:

- Worked with business teams to define key data marts, enabling improved visibility into weekly electronic gas consumption trends and supporting better forecasting.
- Developed robust data ingestion pipelines from multiple sources into a centralized Data Lake, reducing data processing time by 45%.
- Built partitioned and bucketed Hive tables, improving query performance and reducing storage costs for large datasets.
- Designed and optimized SQL scripts for data quality validation and auditing, ensuring 99.9% accuracy in business-critical reports.
- Exported aggregated datasets into RDBMS for Tableau Dashboards, enabling real-time trend analysis and enhancing data visualization capabilities.

Environment: Hadoop, Hive, Spark, Python, SQL, Data Warehousing, Tableau, Airflow, Data Validation, Data Lake, ETL Development, Trend Analysis, Partitioning, Bucketing, SQL Query Optimization, RDBMS, Cloud Storage.

Education:

Masters: Kent state university-2025

Bachelors: Satyabhama institute of science and technology-2023
