

Madhava Rao Kalva

New Jersey, USA | +1-609-333-3224 | madhavaokalva@gmail.com | [Linkedin](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Data Analyst with a strong foundation in cloud data pipelines and real-time analytics. Skilled in Python, SQL, and data visualization with Power BI and Tableau, with hands-on experience collaborating with cross-functional teams. Recognized for developing scalable data solutions and ensuring data integrity, the candidate is committed to delivering actionable insights to drive informed business decisions.

EDUCATION

New Jersey Institute of Technology (NJIT), USA
M.S., Data Science

Sep 2023 - May 2025

Dayananda Sagar Academy, Bengaluru
B.E., Electronics & Communication Engineering

Aug 2017 - Jul 2021

EXPERIENCE

Vaeso India Pvt. Ltd
Data Analyst

Dec 2021 - Dec 2022
Bengaluru

- Engineered scalable data pipelines to support the ingestion and processing of multi-source data, ensuring efficient data collection and organization.
- Developed robust ETL workflows to cleanse and aggregate production and operations data, aligning with best practices in data accuracy and integrity.
- Integrated real-time data from IoT sensors, shop-floor devices, and ERP systems to facilitate exploratory data analysis and identify operational trends.
- Designed and implemented data models and interactive dashboards using data visualization tools, enabling clients to optimize production workflows and derive actionable insights.

PROJECTS

Brazillian ecommerce

- Built an end-to-end Azure-based data pipeline to process the brazillian e-commerce dataset using ADF, ADLS Gen2, and Databricks datasets, ensuring efficient processing and high data quality.
- Ingested raw data from GitHub and SQL sources into ADLS, followed by PySpark-based transformations in Azure Databricks.
- Integrated MongoDB as a reference source to enrich transactional and customer-related data.
- Stored curated data back in ADLS and enabled analysis via Synapse Analytics and visualization in Power BI.

Real-Time Weather Reporting System with Microsoft Fabric

- Developed an end-to-end real-time data pipeline to stream weather data using Azure Function App and Event Hub.
- Routed streaming data into Microsoft Fabric Eventstream and stored it in Eventhouse Delta tables for structured analytics.
- Enabled real-time data monitoring and visualization in Power BI dashboards.
- Secured the pipeline using Managed Identity, Azure Key Vault, and RBAC for production readiness.
- Demonstrated scalable, low-latency architecture for IoT-style telemetry ingestion and analytics

TECHNICAL SKILLS

- Languages:** Python, SQL, PySpark
- Visualization:** Power BI, Tableau, Data Visualization
- Pipelines/ETL:** Airflow, Snowflake, Databricks, Terraform
- Cloud:** AWS (S3, Lambda, Redshift, Glue, EC2), Azure, Microsoft Fabric
- Data Warehousing:** Star/Snowflake Schema, Data Lake Gen2
- APIs/Integration:** REST, Tweepy, Redis
- Monitoring & Security:** Logging, IAM, Key Vault
- Version Control:** Git, Airflow, Kafka
- Analytics:** Business Analytics, Data Science, Statistics

CERTIFICATIONS

- Microsoft Fabric Data Engineer:** Jun 2025-Jun 2026
- SQL (Advanced) Certificate:** HackerRank - Jun 2024
- Cisco Data Analytics Essentials:** Mar 2025
