**.NET Full Stack Developer**

---

## PROFESSIONAL SUMMARY:

- Full stack developer with 5+ years using .NET, C#, and Azure Services like Azure Functions, Service Bus, and Web Apps, emphasizing clean architecture and maintainability. Leveraged Agile practices within a Scrum team environment, contributing from task design to deployment.
- Developed secure RESTful APIs using ASP.NET Core, integrating them with React and NextJS front ends, and implemented user authentication flows, ensuring seamless integration with stateful components. Showcased excellent communication skills conveying technical concepts.
- Created scalable web applications using React, NextJS, HTML5, CSS3, Bootstrap, and TypeScript/JavaScript to deliver dynamic dashboards and responsive user experiences, optimizing performance and ensuring reusable component design.
- Proficient in deploying cloud-native services using Azure App Services, Azure SQL, and AKS, ensuring secure access and data durability across environments, with hands-on experience in component creation and lifecycle management.
- Managed CI/CD pipelines with Azure DevOps for build automation, code scanning, and zero-downtime deployments, utilizing Repos and Boards for task management and orchestration within an Agile environment.
- Designed secure user authentication and authorization using ASP.NET Identity, implemented token renewal logic, and protected routes using role-based access and guards, calling backend APIs and integrating with stateful components.
- Optimized SQL Server databases using views, joins, functions, and indexing strategies for high-volume transaction processing, demonstrating proficiency in .NET & C# with 3+ years of experience and Azure Services.
- Wrote MSTest and NUnit test suites with Moq and In-Memory DB contexts for validating service logic and improving code quality, demonstrating the ability to work independently from task design to deployment.
- Maintained version control using Git and Azure Repos with feature branches and pull requests to support collaborative enterprise development workflows, showcasing hands-on development with Azure Services for 2+ years.
- Developed Power BI dashboards and embedded reports into .NET apps using service principals and token-based row-level security for secure data analytics access, demonstrating expertise in creating services and configuring routing mechanisms.
- Integrated Postman collections for self-documenting APIs, enabling easier testing and onboarding, while also demonstrating a strong understanding of state management and performance optimization in React and NextJS.
- Built serverless functions using Google Cloud Functions with trigger-based execution logic for email notifications and data archival, showcasing proficiency in .NET & C# and Azure Services, including Azure Functions.
- Configured GCP IAM roles, service accounts, and secret managers to securely control access to Cloud Pub/Sub, BigQuery, and Google Cloud Storage within .NET-based microservice environments, utilizing DevOps & Orchestration.
- Created CI/CD workflows using Google Cloud Build, Artifact Registry, and Cloud Deploy to automate builds, push Docker images, and trigger rollouts into regional Cloud Run services, working in a Scrum team environment.
- Proficient in React, NextJS, HTML5, CSS3, Bootstrap, and TypeScript/JavaScript, with hands-on experience in component creation, lifecycle management, and templates, demonstrating excellent communication skills.

## TECHNICAL SKILLS:

- **Languages** - C#, .NET Core, ASP.NET, JavaScript, TypeScript, HTML5, CSS3, SQL, LINQ
- **Frameworks** - .Net Core, ASP.NET MVC, Web API, Entity Framework, Angular 12+, Bootstrap, NextJS, React

- **Front-End** - Angular, Razor, JavaScript, jQuery, HTML/CSS, Bootstrap, React, NextJS, TypeScript
- **Cloud Platforms** - Microsoft Azure, GCP, Verizon Cloud Platform (OpenStack-based)
- **Databases** - SQL Server, Azure SQL, MySQL
- **DevOps Tools** - Azure DevOps, GitHub Actions, Docker, Kubernetes, Azure DevOps Repos, Azure DevOps Boards, CI/CD pipelines, AKS
- **Testing Tools** - Postman, NUnit, MSTest
- **Version Control** - Git, GitHub, Bitbucket
- **Other Tools** - Visual Studio, VS Code
- **Reporting Tools** - Power BI, SSRS
- **Azure Services** - Azure Functions, Service Bus, Web Apps

## **PROFESSIONAL EXPERIENCE:**

**Verizon**

**Aug 2023 – Present**

### **.NET Full Stack Developer**

#### **Responsibilities:**

- Developed and deployed scalable web applications using .NET and C#, leveraging Azure Services like Azure Functions and Web Apps for robust backend functionality and efficient resource utilization. This ensured high availability and optimal performance.
- Implemented front-end solutions using React, NextJS, HTML5, CSS3, and Bootstrap, creating dynamic and responsive user interfaces with reusable components and efficient state management techniques. This improved user experience.
- Designed and implemented RESTful APIs using .NET Core, ensuring secure communication between front-end and backend services, and integrated OAuth 2.0 for authentication, adhering to industry-standard security practices. This enhanced data protection.
- Utilized Azure DevOps for CI/CD pipelines, automating builds, testing, and deployments across development, QA, and production environments, improving deployment speed and consistency while adhering to Agile practices. This streamlined workflows.
- Managed data persistence and retrieval using SQL databases, optimizing queries and implementing indexing strategies to enhance database performance and reduce API response times, ensuring data integrity and availability. This improved efficiency.
- Orchestrated containerized applications using AKS (Azure Kubernetes Service), managing deployments, scaling, and networking to ensure high availability and efficient resource utilization, supporting microservices architecture. This improved scalability.
- Integrated Azure Service Bus for asynchronous messaging between microservices, enabling reliable communication and decoupling of components, enhancing system resilience and scalability in a distributed environment. This improved reliability.
- Proficiently used TypeScript and JavaScript to develop interactive and dynamic front-end components, focusing on performance optimization and reusable component design, enhancing the overall user experience and maintainability. This improved code quality.
- Actively participated in Scrum team activities, utilizing Azure DevOps Boards for task management and sprint planning, ensuring timely delivery of features and enhancements while adhering to Agile practices. This improved collaboration.

**Mazik Global**

**Jan 2021 – Jan 2023**

### **.NET Developer**

#### **Responsibilities:**

- Developed ASP.NET Core web applications using .NET and C#, deploying them on Azure Services like Azure Web Apps, configuring secure access tokens and audit logs to support compliance and access policies. This ensured security.
- Implemented front-end components using React, HTML5, CSS3, and Bootstrap, creating responsive UIs and integrating with backend APIs to deliver seamless business logic for healthcare and education platforms. This improved usability.

- Optimized SQL stored procedures and implemented indexing strategies in Azure SQL to significantly enhance query performance and minimize report generation delays, ensuring efficient data retrieval and processing. This improved performance.
- Integrated third-party APIs, including SMS gateways and payment processors, into application workflows to enable transactional messaging, billing, and automated status updates for users, enhancing user engagement. This improved communication.
- Utilized Azure DevOps for managing Repos and CI/CD pipelines, automating builds, testing, and deployments, ensuring code quality and continuous integration while adhering to Agile practices. This streamlined development.
- Implemented Azure Functions for serverless computing, creating event-driven applications and automating background tasks, optimizing resource utilization and reducing operational costs within the Azure environment. This improved efficiency.
- Leveraged TypeScript and JavaScript to develop reusable Angular components, focusing on reactive forms and custom services to handle dynamic enrollment flows and patient record management features. This improved maintainability.
- Contributed to solution design and architecture, ensuring alignment with business requirements and technical feasibility, while also providing excellent communication to stakeholders throughout the development lifecycle. This improved alignment.
- Gained experience working in a Scrum team environment, actively participating in sprint planning, daily stand-ups, and sprint reviews, ensuring timely delivery of backlog items and adherence to Agile practices. This improved collaboration.

## **Info Global Solutions**

**Aug 2019 – Dec 2020**

### **.NET Developer**

#### **Responsibilities:**

- Designed and developed full-stack application modules using ASP.NET MVC with C#, AngularJS, and SQL Server, ensuring responsive UI and scalable backend logic for enhanced user experience and functionality. This improved usability.
- Authored robust business logic components in .NET, integrated RESTful APIs with JSON, and utilized LINQ for streamlined querying and data manipulation across various application layers, ensuring data integrity. This improved efficiency.
- Created modular, reusable UI components using HTML5, CSS3, and Bootstrap, applying clean design principles and ensuring consistency, while implementing dynamic form validations using JavaScript and jQuery. This improved maintainability.
- Conducted version control using Git, performed branch-based development, and participated in pull request workflows to ensure code integrity and peer-reviewed collaboration, adhering to best practices. This improved collaboration.
- Managed Agile sprint deliverables using JIRA, tracking stories, bugs, and tasks across sprint cycles, and collaborated closely with cross-functional teams for continuous delivery, adhering to Agile practices. This improved teamwork.
- Supported production stability by debugging issues across layers, conducting unit tests in NUnit, and collaborating with QA to identify and resolve application-level bugs efficiently, ensuring reliability. This improved stability.
- Gained experience with Azure Services, exploring Azure Functions and Web Apps for potential migration of existing applications to the cloud, enhancing scalability and reducing infrastructure costs. This improved scalability.
- Developed proficiency in TypeScript by converting existing JavaScript code to TypeScript, improving code maintainability and reducing runtime errors, enhancing the overall quality of the application. This improved code quality.
- Implemented DevOps principles by automating build and deployment processes using Jenkins, improving deployment speed and consistency, and reducing manual errors, enhancing the overall efficiency of the development lifecycle. This improved efficiency.

#### **Certifications:**

- AZ-900: Microsoft Certified Azure Fundamentals
- AZ-204: Microsoft Certified Azure Developer Associate
- PL-300: Microsoft Certified Power BI Data Analyst Associate

**Educational Details:**

**Master of Science in Computer Science** - Fitchburg State University

**Bachelor of Technology in Electrical Engineering** - JNTU Kakinada
