

# Adi Vishnu Madhuri Devarapalli

Denton, TX, USA | +1 (425) 921-0322 | GitHub | LinkedIn | adivishnumadhuridevarapalli@gmail.com

## Education

|                                                                                       |                     |
|---------------------------------------------------------------------------------------|---------------------|
| University of North Texas, Denton, TX, MS in Computer Science (GPA: 4.0/4.0)          | Aug 2024 – Dec 2025 |
| Bapatla Eng. College, India, B.Tech. in Electronics and Communications (GPA: 8.77/10) | Sep 2014 – Apr 2018 |

## Technologies

**Languages:** Python, Java, My SQL, NoSQL, C#

**Skills:** Problem Solving, Cloud Computing, Full stack Development, Incident Management, Troubleshooting, Technical Support

**Tools and Technologies:** Microsoft Azure, Amazon Web services (EC2, SQS, S3, Lambda, DynamoDB), Git, JIRA

**Web Technologies:** React (Front-End), Asp.Net, Flask, REST services, HTML5, CSS3, JavaScript

**Certifications:** AZ-900: Azure Fundamentals Certification, AZ-104: Azure Administrator Associate

**CourseWork:** Introduction to Big Data and Data Science, Fundamentals of Database Systems, Data Structures and Algorithms, Operating System Design, Data Mining, Data Analytics, Information Retrieval and Web Search, Software Development for AI.

## Experience

**Software Engineer**, Accenture – Hyderabad, India Nov 2019 – Apr 2024

- Developed and customized ServiceNow Service Portal for Pfizer's global manufacturing sites using AngularJS, UI policies, client/server scripts, and widgets, ensuring alignment with enterprise branding and usability standards
- Designed and integrated Scripted REST APIs to sync data across ServiceNow and third-party applications (e.g., ERP and quality systems), reducing manual data entry efforts by 60% and improving data consistency.
- Implemented Virtual Agent with NLP-driven conversational flows and contextual responses, cutting live agent tickets by 35% and improving resolution time for Tier-1 incidents.
- Designed and implemented Service Catalogs and automated workflows in ServiceNow to streamline website creation/update requests, reducing resolution time by 50% and enhancing team efficiency
- Implemented Azure DevOps CI/CD pipelines with automated Selenium/PyTest test suites, reducing test cycle delays by 40% through failure detection and email alerts. Automated weekly QA reporting to track pipeline performance, improving transparency and accelerating decision-making.

**Associate Software Engineer**, Astona Private Limited – India Apr 2018 – Apr 2019

- Developed a website for an agricultural marketplace connecting 1,000+ farmers and traders, improving transaction efficiency and expanding access to agricultural services.
- Built and maintained back-end services and APIs to support marketplace functionality using Python and Flask frameworks ensuring scalability, reliability, and seamless integration with front-end components
- Collaborated with product and design teams to develop features, ensure code quality, and enhance user experience through testing and user feedback.

## Projects

**Face Recognition as a service, AWS Cloud project** [Java - Spring Boot, AWS]

- Developed a scalable and efficient Face Recognition as a Service application using Java Spring Boot, leveraging AWS EC2 for deployment, AWS S3 for storage, and AWS SQS for auto-scaling to provide elastic, on-demand image classification capabilities. Designed a multi-tier architecture to optimize performance and resource utilization, enabling seamless scaling based on input volume to ensure high availability and responsiveness.

**End-to-End RAG based Chat-bot on AWS** [ Python, Streamlit, RAG ]

- Developed a full-stack Retrieval-Augmented Generation (RAG) application on AWS, automating infrastructure with CloudFormation and integrating serverless Lambda functions with AWS Bedrock models for document processing, semantic search, and response generation.
- Implemented secure API endpoints with AWS Cognito authentication and JWT authorization, supporting document upload, query processing, and real-time AI-driven responses through a Streamlit frontend UI.

**Mentor-Mentee-Map** [ React, Firestore (Firebase) ]

- Developed a React-based mentorship platform to connect mentors and mentees for personal and professional growth. Features include goal setting, progress tracking, meeting scheduling, and a rating system for mentor-mentee interactions.
- Integrated Firestore (Firebase) as a back-end for real-time data storage, ensuring performance and security.

**Ad Click-Through Rate Prediction** [ Python ]

- Conducted a comparative study of machine learning models to predict ad click-through rates on a large dataset using feature engineering, balancing techniques and implementing logistic regression, Decision Tree, Random Forest.
