

Madison Bennett

(619) 647 4150 ~ bennettmadison427@gmail.com ~ [LinkedIn](#)

Relevant Experience

Database Entry Intern

(November 2023 to November 2024)

- Collected, cleaned, and organized remittance data for accounting use Clevermade - Carlsbad, CA
- Assisted in creating a categorization system for efficient data use
- Solved categorization discrepancies.
- Utilization of PowerBI

Software Engineering Intern

(April 2022 to September 2023)

- Investigated software issues ICU Medical - San Diego, CA
- Utilized manual and automated unit tests
- Upheld current design requirements
- Implemented code changes to resolve issues.

Education

Bachelor of Computer Science (GPA: 3.96): San Diego State University (San Diego, CA), May 2025

- Clubs: Aztec Game Labs: Game Programmer

Associates of Computer Science (GPA: 4.00): Cuyamaca Community College (El Cajon, CA), June 2022

Projects

Game For the Earth-War (https://github.com/madBennett/Game-for-the-Earth_War): 2D Unity, C#

- Iteration on the card game war that adds new rules and strategy
- Allowed further exploration of unity and game design as well as providing a fun experience to users

Spook Library (<https://github.com/Repo-Factory/3DGame>): 3D Unity, C#, Collaborative

- 3D haunted Library puzzle game with 4 main puzzles
- Implemented matching puzzles along with scene design
- Allowed for further improvement of game design and GitHub skills

Shape Simulator (https://github.com/madBennett/Shape_Simulator): Matlab

- Shape manipulator for education purposes. Allows manipulation of shape type, size, and color
- Utilizes MatLab GUI along with Matlab programming
- Allowed further exploration of object-oriented programming along with GUI design

Grade Predictor (<https://bit.ly/4kJvkR9>): Python, Google Collab, Scikit-learn, Tensorflow, Collaborative

- Implementation of a Feedforward Neural Network on the UC Irvine Student Performance Dataset
- Utilize data cleaning, evaluation, and tuning: activation, loss function, number of layers, etc.
- Part of a project to evaluate the best model for this data set between a linear regression of FNN

Steeper Agent (<https://github.com/madBennett/SteeperAgent>): C++, Linux integration, Raspberry Pi

- Tea steeping timer prototype that accounts for a variety of tea types and user preference for strength
- Utilizes a Linux environment on a Raspberry Pi along with an external temperature sensor

Knowledge, Skills & Interests

Mathematics: Knowledge of calculus, linear algebra, and advanced probability

Programming: Experience in C++, C#, Java, Python, Haskell, MatLab, and Assembly(MIPS) programming languages, with data and discrete structures, along with Unity and Godot

Creativity: Ability to translate and execute abstract ideas into innovative solutions

Problem-Solving: Using logical reasoning to determine the root of errors and find solutions

Collaborative: Capacity and ability to work with others effectively and efficiently, as well as experience with pair programming. In addition to collaborative version control and integration server experience such as Perforce, Github, and Jenkins
