

MAHA LAKSHMI PILLALAMARRI

858-789-3241 | pmahalakshmi483@gmail.com | [LinkedIn](#) | [GitHub](#) | San Diego, CA

SUMMARY

- 4+ years of experience in data analysis, business intelligence reporting, and data modeling to drive business growth.
- Proficient in SQL, Python (Spark), and Excel for detailed data analysis, cleaning, and ensuring high data quality and integrity.
- Expertise in developing interactive dashboards and reports using Tableau, Power BI, Looker and QuickSight to support data-driven decision-making.
- Experience in scripting SQL, T-SQL and PL/SQL statements - Stored Procedures, Functions, Triggers, and packages.
- Skilled in cloud data platforms (Azure, AWS, GCP), data warehousing (Snowflake, BigQuery), relational, and dimensional data modeling, with expertise in star and snowflake schema design.
- Familiar with LLMs, RAG architecture, token optimization, and experience using prompt engineering, GPT models, AI copilots.
- Proficient in database performance tuning, query optimization, and OLTP/OLAP system analysis.

EXPERIENCE

Hi Tech Honeycomb Data Analyst

San Diego, CA
Oct 2024 - Present

- Developed 6+ advanced **Power BI** dashboards with Power Query, **DAX (calculated columns and measures)**, data modeling, row-level security and **incremental refresh**, enabling stakeholders to analyze 1.5+ million weekly manufacturing operations, sales, financial data and reduced report refresh times by 40% and saved 8 hours per week.
- Streamlined **Excel** based reporting work flows into Power BI solutions, utilizing **Power Automate** to **schedule refresh**, automate report distribution, set triggers and save over 100 hours per month in manual effort.
- Performed efficient data transformations using **PySpark** and **SparkSQL** within **Microsoft Fabric** notebooks, implementing **Medallion Architecture** (Bronze, Silver, Gold) to streamline raw to clean data flows on batch and streaming data.
- Developed complex SQL queries using window functions, CTEs, views, and stored procedures to support real-time reporting and reduce ad hoc analysis request turnaround time by 35%.
- Performed real-time ad-hoc analysis and data validation **with SQL Server and SQL Analytics Endpoints** on Fabric Lakehouse for operational reporting.
- Developed complex pipelines on Azure to manage data from disparate sources, REST APIs, using **Azure Data Factory** with Data Lakes, and SQL Server to streamline ETL processes, achieving a 25% improvement in efficiency.
- Acted as Subject matter expert, communicated with cross functional teams and documented processes, and dashboard designs.
- Led **leadership** review **meetings** to demonstrate Power BI dashboard usage, interpretation, data flow governance and architectures.

BCBSM Data Analyst

San Diego, CA
Aug 2023 - Sep 2024

- Developed and **automated** health insurance (Cost of Care, claims, **HEDIS** measures, membership, marketing, medical conditions) dashboards in **Power BI** using advanced SQL queries enabling detailed year-on-year and year-to-date insights by plan type, which helped the business team in identifying unnecessary expenditures and reduced them by 28%.
- Improved SQL performance and report refresh speed by 60% through **query tuning**, **index creation**, and rewriting slow-performing procedures, directly impacting executive dashboard responsiveness.
- Conducted comprehensive data profiling and validation **across EMR, Medicare Advantage (Part A, B) and Prescription Drug** datasets, identifying data quality issues, ensuring consistency, resulting in a 20% reduction in errors.
- Optimized **data quality and governance** through Python based validation scripts, robust data scrubbing workflows, and role-based access control (**RBAC**) in Power BI, improving data reliability and compliance.
- Conducted **A/B testing** using statistical techniques to evaluate the impact of outreach strategies and plan design changes, supporting development of personalized member engagement initiatives and improving enrollment and retention rates.
- Crafted advanced **SQL queries** to create materialized views, and new tables after performing data validation by merging various financial tables, for 3 projects in **Azure SQL Database** and **Azure Databricks**.
- Implemented data transformation workflows on 50 million records using **Apache Spark** (PySpark and SparkSQL) on Azure Databricks.
- Designed scalable **ETL** pipelines using **Azure Data Factory**, and **Databricks**, integrating Salesforce CRM, SharePoint, flat files, and third-party systems into a centralized Lakehouse, enhancing data accessibility and pipeline efficiency.
- Created **Logical Data Models**, **Physical Data Models** (Data models), and **Source to Target Mapping** for migrating 3+ data assets from Oracle DB to Azure data warehouse and developed Data flow diagrams (DFD) using MS Visio.

Business Intelligence Analyst

Jun 2020 - Jul 2022

- Crafted advanced **SQL queries** to create views, and new tables after performing data validation by merging various financial tables, for 5 projects in **AWS Redshift**.
- Performed data transformation and flow orchestration using **Tableau Prep**, and built 6+ dashboards showing financial trends, credit card utilization, banking metrics, KPIs, ROI and Risk Analysis, which helped detect areas of improvement and increased customer enrollment by 15%.
- Identified suspicious patterns in transactional data and added new rules to the AML (Anti Money Laundering) engine using SQL and Python, improving fraud detection accuracy.
- Utilized **Python (Pandas, NumPy)** (replacing SQL) to preprocess and transform data, achieving a 30% reduction in data cleaning time and improvement in loan and customer segmentation data quality.
- Led and managed 5+ data analysis projects from design to production, enhancing existing processes to increase data accuracy and customer satisfaction by 25% for **CRM data** and built **Tableau** (LODs, parameters, row level calculations) Dashboards.
- Extensively used **Excel (Macros, VBA)**, pivot tables, nested functions, formulas (**VLOOKUP, XLOOKUP**), conditional formatting, graph and chart manipulation for data cleansing and analysis.
- Managed project requirements in **Jira**, creating user stories and tracking sprints to support agile development.
- Used AWS EMR to transform and move large amounts of data into and out of **Amazon S3** and Amazon **DynamoDB**.
- Leveraged AWS S3, Redshift, and Glue to develop and maintain scalable data pipelines, processing over 3 TB of data ensuring efficient data storage, processing, and analysis, reducing data processing time by 30%.

EDUCATION**San Diego State University** | Master of Science in Big Data Analytics | GPA: 3.9/4**SKILLS**

Languages	C, VB, Java, Python, R, PL/SQL, SQL and T-SQL
Analytics	Tableau, Power BI, ArcGIS, Alteryx, Excel (VLOOKUP, Power Query, Pivot Table, Formulas, Index Match), SAS
Big Data/ Database	Oracle, MySQL, SQL Server, PostgreSQL, Spark, Databricks, Snowflake, Salesforce
Tools	Lucid Chart, Miro, Visio, Collibra, Jira, Git, GitHub, Service Now
Cloud	Amazon Web Services (RedShift, RDS, S3, AWS Quick Sight, EC2, Glue, Sage maker), Microsoft Azure (Fabric, Data Lake, Blob Storage, Data Factory, Synapse, SQL Database, Cosmos DB), GCP
Competencies	Data Modeling, Data Warehousing, ETL (Extract, Transform, and Load), Data Analytics, Data Visualization, Business Intelligence and Reporting, A/B Testing, Statistical Analytics, Predictive Analytics, Machine Learning, Neural Networks, Large Language Models

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate PL -300
- Tableau Data Analyst/specialist Desktop Certification
- SQL Hacker Rank Advanced Certificate
