

Professional Summary

Data Analyst with over 4+ years of experience delivering actionable insights to drive business growth and operational efficiency. Expert in Python, SQL, PySpark, and Tableau for data processing, predictive Modeling, and interactive dashboard creation. Proficient in building ETL pipelines and managing data in Snowflake, Redshift, and MySQL. Skilled in machine learning techniques, including regression, clustering, and classification, to support risk assessment and demand forecasting. Adept at collaborating in AGILE environments to align analytics with business goals, optimizing performance, and reducing costs.

Education

Master of Science in Information Systems	May 2024
Northeastern University	
Bachelor of Engineering in Information Technology	May 2022
Mumbai University, India	

Technical Skills

Programming & Tools:	Python (Pandas, NumPy, Scikit-learn), SQL (JOINS, CTEs), PySpark, R, Hadoop, Kafka
Data Visualization:	Tableau, Power BI (DAX), Microsoft Excel (VLOOKUP, Pivot Tables)
Machine Learning:	Regression, Classification, Clustering, Random Forest, SVM
Databases & Warehousing:	MySQL, SQL Server, MongoDB, Snowflake, Redshift, Big Query, PostgreSQL, T-SQL, Oracle Database, Microsoft SQL Server
Advanced Excel:	Pivot Tables, VLOOKUP, INDEX-MATCH, Power Query, Power Pivot, Macros, VBA, Data Filters
Cloud Platforms:	AWS (EC2, S3, EMR), Azure (Data Lake), GCP (BigQuery)
Other:	ETL Pipeline Development, Data Cleaning, Agile Methodologies, Strong Communication, Problem-Solving,
Analytics:	Data Mining, Insights Development, Technical Design Optimization, Data Storytelling, Systems Thinking

WORK EXPERIENCE

Morgan Stanley, MA, Data Analyst

May 2024 – Current

- Developed predictive models using Python (Pandas, NumPy) to enhance fraud detection, improving transaction anomaly identification accuracy by 25%.
- Designed ETL pipelines with PySpark on Databricks (Azure), reducing data processing time for large datasets by 30%.
- Created interactive Power BI dashboards with advanced DAX functions, boosting stakeholder engagement by 30% through improved KPI visualization.
- Automated variance analysis in SQL, identifying cost drivers and reducing budget inefficiencies by 30%.
- Applied K-means clustering for customer risk profiling, enhancing segmentation models by analyzing credit and repayment patterns.
- Conducted A/B testing for product feature rollouts, increasing user engagement by 20% through data-driven decisions.
- Streamlined ad-hoc reporting with Python scripts, cutting manual effort by 15% and ensuring data reliability across systems.
- Developed and deployed machine learning models (e.g., regression, clustering) using Scikit-learn to forecast business metrics, improving operational efficiency by 30% through predictive analytics.
- Designed and implemented automated ETL pipelines using tools like Apache Airflow and AWS Glue, reducing data processing time by 35% and ensuring seamless data flow for real-time reporting.
- Leveraged cloud platforms (AWS, Google Cloud) to process and analyze large-scale datasets using Spark and Hadoop, enabling scalable solutions for data storage and real-time analytics.

Orion Technolab, India, Data Analyst

July 2019 - Aug 2022

- Built demand forecasting models using Python and Apache Spark, improving inventory management by 20% and reducing stock shortages.
- Developed real-time Power BI dashboards for supply chain analytics, accelerating decision-making and minimizing logistics delays.
- Integrated ERP and warehouse data using SQL (JOINS, CTEs), creating a centralized platform for real-time analytics.
- Reduced excess stock by 15% with machine learning models (TensorFlow, Scikit-learn), visualized in Tableau for stakeholder insights.
- Optimized route planning with predictive analytics in Python, lowering transportation costs and delivery times by 10%.
- Enhanced Snowflake data warehousing by tuning ETL processes, improving query performance in production environments.
- Presented actionable insights using Excel (Pivot Tables) and Tableau, simplifying complex reports for cross-functional stakeholders.
- Translated complex data findings into compelling narratives and presentations for C-level executives, utilizing advanced visualization techniques to drive the adoption of data-driven initiatives across departments.
- Utilized Microsoft Azure services (e.g., Azure Synapse Analytics, Azure Data Factory) to build and optimize scalable data pipelines, enabling real-time data processing and analytics, which improved report generation efficiency by 42%.
- Partnered with business stakeholders to identify KPIs and deliver data-driven recommendations, resulting in a 25% increase in revenue/customer retention/operational efficiency through targeted strategies.
