

MAHESH MUNNA

QA Automation Engineer

Phone: +1 (929)-583-1209

Email: munnamahesh1311@gmail.com

SUMMARY

QA Automation Engineer with around 4 years of combined experience in **Software Testing**, **Test Automation**, and Quality Assurance across Financial Services, E-commerce and Retail domains. Proven expertise in **Java**, **Selenium**, **API/REST** testing, and **Cucumber** within **Agile** environments. Skilled at designing and enhancing reusable test automation frameworks, troubleshooting and resolving defects, and delivering end-to-end automated solutions. Passionate about improving software quality, accelerating delivery cycles, and ensuring regulatory compliance.

TECHNICAL SKILLS

Languages: Core Java, Python, SQL.

Automation Tools & Frameworks: Selenium WebDriver, BDD Cucumber, TestNG, Maven, Junit.

API Testing: Rest Assured, Postman, JSON Path,

CI/CD Tools: Jenkins, Bitbucket, Bamboo, HP ALM (Quality Center), JIRA

IDEs: Spring Tool Suite (STS), Eclipse, IntelliJ, Visual Studio Code (VS Code).

PROFESSIONAL EXPERIENCE

QA Analyst Internship

Oigetit.ai - Fake News Filter

Pollard Rd. Los Gatos, California, United States. Remote

June 2025 – Present

- Executed and validated manual test cases for iOS app features to verify functionality, ensuring alignment with product and business requirements.
- Performed **Functional** and **Exploratory** testing on **AI-driven** iOS applications, identifying defects and documenting detailed bug reports for the development team.
- Delivered consistent testing updates to the QA Lead, ensuring clear and transparent communication regarding test progress and results.
- Assessed the iOS app's user interface (UI) and user experience (UX), providing actionable recommendations to enhance usability and ensure a seamless, intuitive experience for end users.

TEST AUTOMATION ENGINEER

Tata Consultancy Services, India

July 2021 – August 2023

- Automated critical business workflows for an **Investment Banking Web application**, reducing manual test effort by ~60% and improving test accuracy and release consistency across multiple cycles.
- Developed and maintained robust test automation scripts using **Selenium WebDriver**, **Java**, integrated with **BDD Cucumber**, achieving high behavioral test coverage aligned with business acceptance criteria.
- Implemented a custom **BDD Cucumber framework** to make test scenarios readable and maintainable, facilitating improved collaboration between QA, developers, and business stakeholders.
- Applied domain expertise in investment banking to design risk-based test cases, ensuring end-to-end validation of business-critical workflows and regulatory compliance.
- Developed and implemented **automated API test suites** with **Rest Assured** (Java), achieving ~95% regression coverage and enabling faster feedback on backend service stability.
- Led efforts to upgrade automation frameworks to improve maintainability and scalability, reducing script maintenance time by 30%.
- Performed **data validation** and **Back-end Testing** by comparing source and target data using **SQL Developer** and **Excel**.
- Executed detailed test scenarios and test cases, contributing to a measurable reduction in post-release defects and improved product stability.
- Participated actively in **Agile ceremonies** and managed user stories, test execution, and defect tracking through **JIRA** and **HP ALM**, improving cross-team collaboration.
- Produced actionable test reports and weekly quality metrics, supporting continuous quality improvement and enhancing transparency for stakeholders.

Quality Assurance Engineer Trainee

Tata Consultancy Services in Hyderabad

July 2020 – May 2021

- Gained hands-on experience in Manual and Automation testing on a real-time financial transaction's web application, improving test coverage and identifying critical defects pre-release.
- Gained hands-on experience automating **RESTful APIs** using **Rest Assured** and **Java**, building test suites to validate core service functionality.
- Participated in Agile ceremonies and collaborated with QA and development teams to review requirements, analyze code changes, and define targeted test scope for new and updated features.
- Used **SQL queries** to verify test data, perform data integrity checks, and support **functional** and **integration testing** efforts as part of the test design and execution process.
- Leveraged tools like **MySQL Workbench** and **SQL Developer** during the testing phase to simulate real-world QA processes.
- Logged and tracked defects using bug tracking tool, using JIRA & HP ALM, providing detailed reproducibility steps and supporting faster resolution of user-reported issues.
- Explored Java and Python to develop basic test utilities and debugging scripts, improving testing efficiency and supporting exploratory testing efforts.

EDUCATION

Southeast Missouri State University

Master of Science in Applied Computer Science

GPA: 3.5

PROJECTS

Client: Vanguard

Project: Retail Automation Services

Description:

The Vanguard Group is an American investment management. It is the largest provider of mutual funds and the second-largest provider of Exchange-Traded funds (ETFs) in the world. In addition to mutual funds and ETFs, Vanguard offers brokerage services, variable and fixed annuities, educational account services, financial planning, asset management, and trust services.

- Developed and maintained automation scripts using Java, Selenium WebDriver, and BDD Cucumber, enabling consistent and reliable automated regression testing across multiple sprints and releases. Analyzed test requirements and streamlined test cases, resulting in reduced manual testing effort and improved execution efficiency for critical business workflows.
- Developed and implemented automated API test suites using Rest Assured (Java), validating RESTful API endpoints and achieving ~95% regression coverage across key backend services, reducing post-release API defects.
- Analyzed automated daily regression test reports from CI/CD pipelines, Investigated failed scenarios, Logged defects in Jira with clear descriptions. Communicated findings to the team and contributed to fixing the issues.
- Identified and prioritized high-impact and high-frequency test cases for automation based on risk and business value, maximizing automation ROI and strengthening test coverage of critical workflows.
- Logged and tracked API and UI defects with detailed reproducibility steps in HP ALM (Quality Center), collaborated with developers for faster issue resolution, and shared comprehensive test reports with cross-functional teams.
- Contributed to test strategy design and led end-to-end (E2E) test execution across a distributed financial platform, helping to improve overall product quality and support smooth Agile delivery.

Project Title: Automating an E-Commerce Web Application

- Simulated a real-world e-commerce platform and developed an end-to-end BDD test automation framework using Java, Selenium WebDriver, and Cucumber.
- Designed and automated functional test cases for login, search, cart, checkout, and payment workflows, leveraging Page Object Model (POM) for maintainability.
- Integrated JUnit, Maven, and Jenkins to enable continuous integration and scheduled automated test execution.
- Implemented data-driven testing to validate multiple scenarios with dynamic datasets, ensuring robust test coverage and reliability.
