

MAHESH PUJALA

SOFTWARE DEVELOPER

Mobile: +1 816-565-9084 | **Email:** pujalamaheswararao52@gmail.com | **Linkedin :** [maheswararao pujala](#)

SUMMARY

- Highly skilled Software Developer with 3+ years of experience in designing and developing robust web applications and services using Java, Spring Boot, and Spring MVC.
- Proficient in creating dynamic, user-friendly interfaces using ReactJS, HTML, CSS, and JavaScript, and experienced in leveraging cloud technologies, including AWS services, for scalable and reliable solutions.
- Demonstrated expertise in Microservices architecture, database management with MySQL, PostgreSQL, and MongoDB, and optimizing complex SQL queries for efficient data retrieval and storage.
- Successfully implemented CI/CD pipelines with Jenkins for Kubernetes configurations, enhancing automation and operational efficiency, and consistently delivering high-quality solutions on time and within budget.
- Strong advocate of Agile methodologies and test-driven development, with a proven track record of leading the development of highperformance applications, from backend logic and RESTful APIs to frontend components and dynamic view rendering.
- Certified AWS Solutions Architect Associate with additional training in Java programming, experienced in various development tools and version control systems and committed to continuous improvement and collaboration with cross-functional teams to achieve project goals.

EDUCATION

University of Missouri-Kansas City	MO, USA
Master of Science in Computer Science	Jan 2023 – May 2024
KKR & KSR Institute of Technology & Sciences	Guntur, India
Bachelor of Technology in Computer Science	Jul 2017 – May 2021

TECHNICAL SKILLS

Programming Languages:	C, C++, Java, Python
Frameworks:	Spring MVC, Spring Boot, Spring Security, Hibernate, Node JS, React, Angular, Microservices.
Web Technologies:	HTML, CSS, JavaScript, jQuery, JSON, RESTful Services, AJAX.
Database Technologies:	Oracle, MySQL, MongoDB
Cloud Technologies:	AWS (EC2, S3, Lambda, Redshift, CloudWatch, RDS).
Methodologies:	SDLC, Agile, Waterfall.
Version Control:	Git, GitHub.
J2EE Technologies:	Servlets, JSP, JSTL, JavaBeans, JDBC.
Operating Systems:	Windows XP/Vista/7, Unix, Linux
Tools:	JIRA, Jenkins, Eclipse IDE, Visual Studio, Maven, IntelliJ
Other Skills:	Maven, Jenkins, Postman, Tomcat.

PROFESSIONAL EXPERIENCE

Sodexo (University of Missouri, Kansas City)	
Student Worker / Software Developer	Sep 2023 - Dec 2023
- Engineered robust, scalable web applications using Java, Spring Boot, and Angular frameworks, ensuring high performance, responsiveness, and a seamless user experience across various devices and platforms. - Designed MongoDB and PL/SQL databases to create efficient schemas, write 30 complex queries and optimize data retrieval processes, resulting in faster data access and improved application performance. - Partnered with cross-functional teams to gather requirements, plan sprints, and deliver features using both Agile and Waterfall methodologies, ensuring timely project completion and alignment with business goals. - Executed comprehensive unit testing using JUnit and performed rigorous code reviews to maintain high code quality and adherence to best practices, and reduced the likelihood of bugs and issues in the production environment, with 500-unit tests conducted. - Utilized version control tools such as Git for efficient code management, enabling smooth collaboration with team members, tracking changes, and maintaining a clean codebase. - Engineered high-performance Java applications utilizing J2EE technologies, incorporating JSP for dynamic web content and the Hibernate framework for efficient object-relational mapping, resulting in scalable and maintainable software solutions.	

- Optimized complex SQL queries for PostgreSQL databases by implementing advanced indexing strategies and query-tuning techniques, significantly improving data retrieval speeds and overall application responsiveness.
- Developed server-side logic using Node.js and successfully integrated it with existing Java applications through RESTful APIs, enhancing system capabilities and reducing server response times.
- Orchestrated cloud-based deployments leveraging AWS services, including Redshift for data warehousing, CloudWatch for real-time monitoring and alerting, and RDS for database management, resulting in improved system reliability and reduced operational costs.
- Executed projects using the Waterfall methodology, collaborating with cross-functional teams throughout all phases of the software development lifecycle, delivering 15+ high-quality solutions on time and within budget.
- Administered version control processes using GitHub, implementing branching strategies, conducting thorough code reviews, and resolving merge conflicts, which improved code quality.

Tata Consultancy Services, India

Software Developer

Jul 2021 – Dec 2022

- Engineered robust backend services using Java, implementing core **banking functionalities** such as account management, transaction processing, and user authentication, ensuring high performance and scalability.
- Designed Microservices architecture using Spring Boot and Spring Cloud for modular, independently deployable services and integrate service discovery and load balancing with Spring Cloud Netflix, enhancing scalability and response time.
- Architected MySQL database for efficient data storage and retrieval, optimizing schema design and index usage to manage 100+ customer accounts securely and efficiently.
- Championed test-driven development (TDD) and Agile methodologies (SCRUM) to develop a comprehensive banking application, ensuring rapid iteration and responsiveness to changing business requirements.
- Managed microservices integration, utilizing Apache Kafka for real-time data streaming and MySQL for persistent data storage, improving application scalability and responsiveness to transactional data.
- Developed the front end using ReactJS, creating responsive, user-friendly interfaces for banking operations. Designed reusable components to ensure consistency and maintainability across the application.
- Built web applications with Spring MVC, employing dependency injection for modularity and testability. Integrated Thymeleaf for dynamic view rendering, enhancing the user interface and overall application performance.
- Implemented ReactJS HTTP services to interact with RESTful endpoints, optimizing network requests for seamless data retrieval and manipulation. Enhanced error handling and loading states for improved user experience.
- Established CI/CD pipelines with Jenkins for Kubernetes configurations, automating deployment processes and ensuring continuous integration of new features and updates into the banking application.
- Designed and implemented secure, scalable architectures using AWS services (S3, SQS, DynamoDB, Lambda), ensuring high availability and low-latency operations for critical banking functionalities.
- Actively participated in Agile/Scrum ceremonies, contributing to sprint planning, daily stand-ups, and retrospectives to align development efforts with project goals and stakeholder expectations.
- Conducted 50+ unit tests using JUnit, identifying and resolving critical issues early in the development lifecycle to ensure application reliability.
- Leveraged Docker containers to standardize development environments across teams, improving collaboration and consistency in deploying banking application updates.

Dell Technologies, India

Software Developer

Jul 2020 – Jun 2021

- Engineered an **E-commerce Platform** using Java and Hibernate, integrating payment gateways and inventory management systems to ensure smooth transactions and efficient stock control.
- Deployed AJAX and JSON for asynchronous data exchanges, reducing page load times by 2 seconds and enhancing the shopping experience by allowing real-time updates for product availability and user reviews.
- Formulated and executed 50+ complex SQL queries on MongoDB and relational databases to optimize data retrieval and manipulation, ensuring fast and accurate processing of customer orders and product listings.
- Utilized AWS services like S3 for data storage and CloudFormation for automated infrastructure management, enhancing platform scalability and reliability while ensuring consistent deployment across environments.
- Crafted responsive and interactive user interfaces using React.js and Bootstrap, ensuring a seamless and engaging user experience across different devices, including desktops, tablets, and mobile phones.
- Implemented unit testing with JUnit and API testing with SOAPUI to ensure the robustness and reliability of the platform's components before deployment, reducing post-launch issues and improving user satisfaction.
- Administered GitHub for version control and adhered to SDLC principles, ensuring efficient team collaboration and timely project delivery with high client satisfaction.

Software Developer Intern

Jan 2020 – Jun 2020

- Developed robust and scalable APIs using Java and Spring Boot, implementing RESTful web services to ensure high performance and reliability for a **CRM backend**.

- Created a responsive and user-friendly frontend interface utilizing HTML, CSS, and JavaScript, ensuring seamless functionality across 50+ different devices and screen sizes, enhancing user experience.
- Implemented efficient database interactions with MySQL, focusing on optimizing data storage and retrieval processes, managing database schemas, and performing CRUD operations to ensure data integrity and consistency.
- Designed and optimized complex SQL queries, improving data retrieval speed and overall system performance through indexing, query optimization, and execution plan analysis.
- Utilized Git for version control, managing codebase changes, facilitating seamless team collaboration, and maintaining a clean commit history.
- Applied SDLC methodologies, participating in requirement analysis, design, development, testing, deployment, and maintenance phases to comprehensively manage the CRM system lifecycle, ensuring timely delivery of high-quality outcomes.

Certificates

-
- Achieved AWS Certified Solutions Architect Associate credential
 - Completed training in Java programming and Mastered C programming skills
 - Full Stack Main Frame
