

Mahir Mohtasin

Bethpage, New York

+1-516-974-7993 | mmohtasin93@gmail.com | <https://www.linkedin.com/in/mmohtasin>
<https://github.com/viiewss>

SKILLS

- **Programming Languages:** TypeScript, JavaScript, Go, Python, SQL, NoSQL
- **Web Development:** React.js, Angular, Next.js, Redux, Node.js/Express, HTML, CSS, Chart.js, Tailwind CSS
- **Technologies:** GraphQL, RESTful APIs, Authentication (JWT, Bcrypt, OAuth2.0, Casbin), Jest, React Testing Library, PostgreSQL, MongoDB, FastAPI, Redis, Gin
- **DevOps & Tools:** Kubernetes, Docker, CI/CD (GitHub Actions), AWS (EC2, Elastic Beanstalk, RDS), NATS, Kafka, Datadog

EXPERIENCE

Katapult Media Inc.

Full-Stack Software Engineer

Nov 2023 - Present

Bethpage, New York

- Engineered a scalable microservice architecture using Go, streamlining service-to-service integration and improving overall system efficiency.
- Created a scalable authentication and authorization microservice using Casbin for RBAC and JWT validation with Keycloak, ensuring secure and role-specific access across services.
- Modeled complex data structures in Go and optimized SQL tables through indexing and normalization, reducing database query latency and enhancing data integrity.
- Implemented GraphQL APIs with custom resolvers for efficient client-side retrieval of sensitive health data, reducing server load during peak usage.
- Developed a task prioritization algorithm using weighted job scheduling, accelerating turnaround time for high-value operations and contributing to increased monthly revenue.
- Applied load balancing and asynchronous task scheduling using Kubernetes and NATS to improve service responsiveness and handle growing traffic without latency spikes.
- Refactored React components and GraphQL queries to streamline data flow and reduce frontend delays during time-critical healthcare sessions.
- Identified and resolved frontend performance bottlenecks using Datadog and browser dev tools, significantly improving user experience for medical support staff.
- Contributed to a Python-based AI chatbot designed to assist with healthcare support queries, helping integrate it into production and reduce manual triage.
- Deployed and orchestrated containerized services using Kubernetes on cloud infrastructure, with pipelines and monitoring deployed via AWS (EC2, RDS, S3) and CI/CD automation using GitHub Actions.

Presolved

Full-Stack Software Engineer

Jul 2023 - Nov 2023

Bethpage, New York

- Led development of a full-stack case management application using React.js and Node.js, improving UI responsiveness and reducing page load time by 25% for legal operations teams.
- Designed dynamic user dashboards with React Hooks and Redux to streamline legal workflow visibility, ensuring real-time state updates during high-volume interactions.
- Automated client intake and document routing processes using Python (FastAPI + Celery), enabling asynchronous task execution and reducing ops workload by 30%.
- Improved frontend performance using asynchronous TypeScript loading and browser caching, reducing redundant requests and speeding up initial load time.
- Deployed the application on AWS and contributed to CI/CD pipelines via GitHub Actions

Eisodos (Open Source Labs)

Full-Stack Software Engineer

Jan 2023 - Jul 2023

Bethpage, New York

- Led an agile team to develop a Kubernetes resource visualizer for real-time monitoring of CPU, memory, and network metrics, enhancing infrastructure tuning and improving resource efficiency by 40%
- Integrated OAuth 2.0-based authentication for the Kubernetes metrics visualizer, allowing secure sign-in through third-party providers and restricting access to authorized DevOps users.
- Built a React SPA with Hooks, Router, and code-splitting to enable fast navigation of complex metric data in large Kubernetes clusters.
- Implemented a modular Express.js backend with MVC architecture, enhancing maintainability and accelerating integration of Prometheus metrics for live cluster insights.
- Deployed on AWS (EC2, S3) for scalable hosting and storage, and published to GitHub where it gained 60+ stars in the first week and saw early adoption by the DevOps community.

BesTop

Full-Stack Software Engineer

Jan 2022 - Dec 2022

Bethpage, New York

- Refactored a TypeScript and React-based property management platform to simplify leasing workflows and portfolio management, reducing code volume by 25%.
- Built and maintained Python backend services using FastAPI, improving API performance and reducing manual data entry issues.
- Designed and optimized ACID-compliant PostgreSQL schemas, improving query speed and ensuring data consistency across property records.
- Deployed backend services to AWS (EC2, RDS, S3) using Docker, enabling scalable and reliable infrastructure for daily operations.

EDUCATION

Stony Brook University

Bachelor of Science

TALKS/PUBLICATIONS

- “Web Application Security: Understanding XSS” — Technical Talk (2023). Gave a developer-focused session on identifying and preventing Cross-Site Scripting (XSS) vulnerabilities in modern web applications.
- “Eisodos: The Ultimate Open-Source Kubernetes Metrics Visualizer” — Medium Article (2023) . Authored a deep dive into Eisodos, an open-source tool for real-time Kubernetes resource monitoring and Prometheus integration.
