SUMMARY

Results-driven QA Engineer with 7+ years of expertise in Manual Automation Testing, specializing in Selenium, Cypress, Playwright, and API automation. Proficient in designing scalable Hybrid BDD/TDD frameworks using Java, TestNG, Cucumber, and Maven, integrated with Jenkins CI/CD and GitHub. Strong command of REST API testing (Postman, REST Assured), SQL data validation, and cross-platform mobile automation using Appium (Android/iOS). Skilled in Agile/Scrum, Cloud testing on AWS (Lambda), and performance engineering with LoadRunner. Adept at end-to-end test strategy, defect lifecycle management (Jira), and continuous test optimization for high-quality, enterprise-grade software delivery.

WORK EXPERIENCE

QA Automation Engineer, Invesco // Atlanta, Georgia, USA Aug 2023 – Present

Designed and developed scalable automation frameworks from scratch using Selenium WebDriver, Java, Python (Pytest), Cucumber (BDD/ATDD), and Maven—enhancing test coverage and reducing manual testing efforts by 60

Implemented Behavior-Driven Development (BDD) using Cucumber and Gherkin integrated with Java-based automation scripts, improving traceability between business requirements and automated tests.

Automated REST and SOAP API testing using REST Assured, Postman, and SoapUI; developed reusable Python and Java API utilities, optimizing test data validation and reducing regression cycle time.

Executed CI/CD pipelines by integrating automation frameworks with Jenkins, enabling nightly regression execution and faster feedback in Agile/DevOps environments.

Improved front-end test reliability and performance by automating cross-browser testing with Selenium, Cypress, and Playwright—resulting in a 40

Collaborated with product owners and business analysts to define acceptance criteria and user story test scenarios; actively participated in Sprint Planning, Backlog Refinement, and UAT testing for smooth release cycles.

Developed and optimized test automation for mobile applications using Appium, improving mobile test coverage and reducing manual execution time by 50

Utilized AWS (Lambda, S3) and Docker containers for test data generation, environment setup, and execution of serverless automated tests, reducing infrastructure costs by 30

Led and mentored QA team members in automation best practices, framework design, and CI/CD integration; provided automation strategy and progress reports using Jira and Quality Center.

Enhanced test efficiency through modular and reusable code following the MVC design pattern in automation architecture, significantly reducing script maintenance effort and improving scalability across projects.

QA Automation Engineer, Regions bank // Atlanta, Georgia, USA

May 2022 – Jul 2023

- Designed, developed, and executed robust automation frameworks using Selenium WebDriver, Playwright, Appium, and Cypress, significantly reducing manual testing effort and improving test coverage. Built and maintained Maven-based automation projects (web and mobile) with integrated Jenkins CI/CD pipelines for nightly and on-demand test execution.
- Developed and maintained API automation scripts leveraging Rest Assured, Postman, SoapUI, and Python, ensuring thorough validation of REST and SOAP web services.
- Implemented Hybrid Test Automation Frameworks and Page Object Model (POM) strategies, improving maintainability and scalability of automation suites.
- Conducted functional, regression, GUI, and performance testing across multiple platforms using tools like JUnit, Mocha, LoadRunner, and WebDriverIO, enhancing software reliability.
- Actively participated in Agile/Scrum ceremonies, contributing to sprint planning, backlog refinement, and testing of each release to ensure timely delivery of quality software.
- Created and updated comprehensive Test Plans, Scenarios, and Cases to align with evolving requirements, increasing defect detection efficiency by identifying critical gaps early.
- Executed cross-platform mobile testing on Android, iOS, and other OS environments using Device Anywhere and automation scripts, ensuring consistent app behavior.
- Managed defect lifecycle with Jira, performing defect analysis, reporting, and verification in collaboration with development teams to accelerate resolution.
- Optimized test automation and continuous testing processes, leveraging CI/CD integration, version control (Git), and scripting expertise in Java, JavaScript, and Python to enhance efficiency and reliability.

EDUCATION

Nov, 2023 M.S. in Business Analytics at **Saint Peter's University, NJ**

RELEVANT SKILLS

- **Languages:** HTML5, XML, CSS3, PL/SQL, C, C++, Java, J2EE, JavaScript, Python
- **Testing Tools:** Selenium WebDriver/RC/IDE/GRID, QTP, HP QC, ALM, JUnit, JMeter, Cypress, Playwright, Jenkins, JIRA, Cucumber, SoapUI, REST API, Appium, Postman, TestComplete
- **Build & CI Tools:** Ant, Maven, Jenkins, Hudson, Cruise Control
- **Methodologies:** Agile-Scrum, Waterfall, TDD
- **Mobile Testing Tools:** Appium, Perfecto Mobile
- **Bug Tracking Tools:** HP ALM/Quality Center, JIRA
- **Version Control Tools:** GIT, Subversion (SVN)
- **Database Tools:** SQL Server, MS Access, Oracle, MySQL
- **Operating Systems:** Windows variants, UNIX, Mac
