

Manahil Nasim

San Diego, CA | P: 619-496-1699 | manahilnasim1@gmail.com | github.com/manahilnasim

EDUCATION

UNIVERSITY OF SAN DIEGO

Master of Science in Applied Artificial Intelligence

Relevant Coursework: ML Applications, Neural Networks and Deep Learning, Natural Language Processing, Computer Vision

San Diego, CA

September 2024

SAN DIEGO STATE UNIVERSITY

Bachelor of Science in Management Information Systems

Relevant Coursework: Business Application Programming, Business Intelligence and Analytics, Object Oriented Programming

San Diego, CA

May 2022

TECHNICAL SKILLS

Programming Languages: Python, HTML/CSS, JavaScript

Data Engineering: SQL, Pandas, Airflow, Data Cataloging, CI/CD Solutions

Cloud and DevOps: AWS, Terraform

Hardware & Semiconductor Testing: Advantest 93K, Cohu Delta Design, SMT, TCCT

Data Analysis: Pandas, NumPy, Matplotlib, Seaborn, PCA, Clustering Techniques (Hierarchical, K-means)

Data Visualization: Power BI, Tableau, Seaborn

Project Management Tools: MS Project, Visio, Microsoft Outlook, Asana, Jira

Machine Learning: Scikit-Learn, ANN, LLM, SVM, LSTM, Decision Trees, Random Forests, Gradient Boosting Machines

Natural Language Processing (NLP): NER, POS Tagging, Text Analysis, Sentiment Analysis

WORK EXPERIENCE

Qualcomm

San Diego, CA

Test Engineer

July 2024 – Present

- Conducted semiconductor and 5G hardware testing and validation, providing critical insights for product improvements.
- Developed and executed test plans, analyzed data, and produced reports.
- Played a key role in NPI process by providing insights from testing and validation to improve product design and functionality.
- Collaborated cross-functionally with engineering and data science teams to optimize test processes and ensure quality.
- Configured and maintained hardware setups, managing test operations and ensuring data integrity.

Wastvedt and Company, Inc (Tax and Business Consulting Firm)

Del Mar, CA

Tax & Business Analyst

Jan 2021 – Jan 2023

- Led a high-accuracy financial data migration project to AppFolio, streamlining data integration processes.
- Directed tax calendar implementation, achieving a 95% compliance rate.
- Integrated automated tools for project tracking, significantly enhancing operational efficiency by 85%.
- Processed and maintained financial and tax control documentation, achieving 100% compliance during internal audits.
- Streamlined workflows, boosting operational efficiency by 30%.

UNIVERSITY PROJECTS

Emotion Based Recommendation System:

- Developed a system that analyzes user emotions from facial expressions using computer vision and machine learning.
- Achieved 65.33% test accuracy by suggesting personalized music recommendations (Python, TensorFlow, ResNet50V2).

Quanda Chatbot:

- Engineered an AI-driven chatbot using NLP and machine learning with the SQuAD dataset.
- Enhanced digital communication by providing real-time, accurate responses to user inquiries.

Musical Score Composer Classification:

- Designed LSTM and CNN models for classifying composers based on musical scores.
- Demonstrated advanced neural network architectures with high precision in pattern recognition.

PCA and Clustering for Credit Default Analysis:

- Applied PCA and clustering techniques to stratify credit default data for financial institutions.
- Improved risk assessment models by identifying significant predictors through unsupervised learning.

Intelligent Traffic Management System:

- Designed a comprehensive traffic management system using IoT data and machine learning to optimize traffic flows.
- Demonstrated potential to impact urban infrastructure and public policy by reducing congestion.
