EDUCATION

Master of Computer Science, New Jersey Institute of Technology (GPA: 3.9/4.0)

Jan 2024 – May 2025

Bachelor of Computer Engineering, Charusat University (GPA: 9.75/10.0)

Jul 2019 – May 2023

EXPERIENCE

Software Engineer

Sep 2024 – May 2025

H2 Techno World

- Helped build an inventory and order management system for small businesses using React.js and FastAPI with a MySQL database. Implemented multi-level role-based access and a responsive user interface that improved usability. The platform reduced manual audits by roughly 30% and supported better supply chain decisions by consolidating data and providing clearer insight into inventory status and orders.
- Set up Docker containers and configured continuous integration and deployment pipelines with GitHub Actions. Deployed the services to AWS EC2 instances, which automated releases and minimized downtime during updates.

Junior Full-Stack Developer

Jun 2023 – Nov 2023

H2 Techno World

- Built a tax-invoice management system on IIS with PHP and MySQL. Implemented automatic PDF generation and integrated SMTP email delivery, improving invoice reliability and ensuring clients received accurate, consistent records.
- Built dashboards and automated data checks to reduce manual oversight and transactional errors by about 30%. Enhanced user authentication with Node.js and created a lightweight workflow, which allowed faster releases and reduced operational bottlenecks.

Full Stack Developer (Intern)

Dec 2022 – May 2023

Crown Software

- Optimized SQL queries and enhanced API performance on the MDHostel platform, cutting response times by 40% for over 500 residents. Coordinated closely with both the Flutter and Web Development teams to align backend improvements with a smooth user experience.
- Helped design and deploy more than five modules (Attendance, Complaint, Fees, Food, Leave) with secure role-based access and continuous information tracking. These modules streamlined administrative workflows and cut staff effort by approximately 35%.

PROJECTS

Multi-Agent Conversational AI System (Hackathon, Jul 2025)

Python, FastAPI, React.js, PostgreSQL

Worked in a small team to build a multi-agent conversational AI system for a hackathon. Combined Retrieval-Augmented Generation (RAG), FAISS semantic search, and the Cohere language model to support natural-language interactions with persistent memory across multiple turns. Developed RESTful APIs to deliver responses and created a React-based management interface with simple CRM features to monitor and adjust agents. The project allowed context-aware dialogue across agents in real time and showcased the integration of modern AI techniques in a web application.

LifeSaver HI

JavaScript, PHP, MySQL

Developed an emergency response system that uses QR codes to trigger help in critical situations. When scanned, the system captures and sends live GPS location, accident photos, and essential medical details such as blood type, insurance information, and known health conditions to first responders. It also sends notifications via SMS, WhatsApp, and email to emergency services and pre-selected family contacts, which helps reduce response delays and improve critical care readiness.

SKILLS

Languages

Python, JavaScript, C++, PHP

Frameworks

React.js, Next.js, Vue.js, Laravel, FastAPI, Node.js

Databases

MySQL, PostgreSQL, MongoDB

Tools

Git, Docker, AWS (EC2, S3, Elastic Beanstalk, Amazon RDS, SQS, SNS, Lambda), GitHub Actions, REST APIs,

Testing

Unit Testing, Regression Testing, JIRA

Certifications

[AWS Cloud Practitioner](#), [AWS Certified Developer - Associate](#)

Soft Skills

Communication, Teamwork, Agile/Scrum
