

MANAS PAWAR

BUSINESS INTELLIGENCE ANALYST | DATA ANALYTICS PROFESSIONAL

+1 8572694163 | mpawar0305@gmail.com | Boston, Massachusetts, United States | [LinkedIn](#)

PROFESSIONAL SUMMARY

Business Intelligence Analyst with 5+ years of combined professional and academic experience in analytics, dashboard development, data modelling, and decision intelligence. Proven track record of translating raw data into actionable insights that drive growth, improve process efficiency, and inform executive strategy across domains including finance, marketing, and operations.

Fluent in modern BI stacks — including Tableau, SQL, Power BI, Snowflake, and Alteryx — with hands-on expertise in building scalable ETL pipelines, automating reporting workflows, and ensuring end-to-end data integrity. Skilled in root cause analysis, performance forecasting, and delivering executive-ready visual narratives aligned with business goals.

Known for balancing short-term tactical asks with long-term analytics infrastructure, fostering stakeholder confidence through self-serve enablement, and aligning analytics initiatives with evolving business strategies. Equally effective embedded within product teams or leading cross-functional efforts in enterprise environments

- Designed and deployed end-to-end BI solutions using Tableau, Power BI, and Snowflake to drive executive decision-making across marketing, finance, and operations, enabling leadership to monitor KPIs, evaluate ROI, and guide strategic initiatives
- Built and optimized scalable ETL pipelines using Alteryx and SQL to extract, clean, and transform large volumes of cross-platform data, significantly improving reporting accuracy, data reliability, and refresh frequency
- Conducted advanced cohort analysis, funnel optimization, and behavioral segmentation using SQL and Tableau to uncover trends in user retention, feature adoption, and conversion drop-offs across product and campaign lifecycles
- Collaborated directly with FP&A, product, and marketing leaders to define success metrics, standardize KPI logic, and build data products that aligned with quarterly goals, revenue targets, and performance indicators
- Automated executive dashboards using Rollstack and Tableau to deliver real-time visualizations of revenue trends, forecast accuracy, and performance deltas, eliminating manual reporting overhead and increasing visibility across leadership teams
- Engineered multi-source data marts and staging layers to support self-serve analytics and downstream dashboard development, ensuring consistent metric logic and improving stakeholder access to curated datasets
- Integrated campaign, CRM, and engagement data through Alteryx workflows and SQL joins to streamline reporting for lifecycle, growth, and sales teams, enabling faster time-to-insight and reducing dependency on ad hoc analysis
- Conducted exploratory data analysis using Python (pandas) and SQL to identify high-impact patterns in user activity, content engagement, and product usage, informing roadmap prioritization and A/B testing strategies
- Designed dashboard documentation templates and standardized delivery protocols to support version control, reproducibility, and consistency across business-facing reports used by multiple departments
- Partnered with engineering and data infrastructure teams to validate data quality, monitor pipeline health, and contribute to QA routines that prevented discrepancies in executive-facing dashboards
- Led efforts to translate ambiguous business problems into structured analytics projects by gathering requirements, modeling datasets, and delivering stakeholder-ready reports that directly informed product and campaign decisions
- Participated in Agile sprint planning and backlog grooming through JIRA, maintaining alignment across analytics, engineering, and business teams for rapid delivery of high-impact reporting assets

WORK EXPERIENCE

Business Intelligence Analyst, TripAdvisor, Needham, United States

Technologies: Tableau, SQL, Whampipe, Snowflake, Gitlab, Rollstack

Oct 2022 – Jul 2025

- Architected and maintained a portfolio of 20+ Tableau dashboards, including the company's most-viewed reporting solution (2,500+ monthly views), enabling leadership to track performance metrics, monitor regional trends, and identify opportunities for business process optimization
- Acted as the primary BI partner for the finance team, delivering data-backed reporting solutions while mentoring new analysts and senior hires to accelerate onboarding and promote a culture of data ownership and self-serve analytics
- Designed and managed Snowflake-powered ETL pipelines to support high-volume financial and operational reporting, enhancing data accuracy and enabling more reliable ROI and margin analysis for quarterly planning and forecasting
- Automated recurring executive reporting workflows using Rollstack, reducing 2+ hours of manual work each cycle and delivering dynamic slide decks with real-time KPIs, revenue forecasts, and market trends for strategic review meetings
- Partnered cross-functionally with finance, analytics, and engineering teams to streamline data flows, improve process efficiency, and centralize key performance metrics, increasing alignment across business units and accelerating time-to-insight
- Developed parameterized Tableau dashboards with flexible drill-down filters across product lines, geographies, and date ranges, boosting dashboard adoption among non-technical users and enhancing the strategic value of BI assets
- Conducted deep-dive investigations into anomalies using SQL and Snowflake to identify breakdowns in data logic and campaign tracking, leading to resolution of attribution errors and improved spend optimization for paid marketing initiatives
- Championed GitLab for version control across SQL development and dashboard iterations, improving team collaboration, reducing rework, and enabling faster and more auditable deployments of reporting assets
- Directed the standardization of KPI definitions and implemented a shared team-wide data dictionary, reducing cross-functional misalignment, improving data trust, and driving consistent reporting across finance, product, and marketing functions

Data Scientist II, Staples Inc, Framingham, United States

Technologies: Tableau, Alteryx, SQL, Snowflake

Apr 2022 – Jul 2022

- Drove the design and deployment of robust Alteryx workflows to consolidate and transform vendor data from disparate sources, significantly improving data completeness and enabling deeper competitive intelligence across strategic product categories
- Built an interactive Tableau dashboard to visualize SKU-level trends, pricing variances, and vendor metrics, providing strategic insights to internal teams and external partners for more effective negotiations
- Supported enterprise-wide analytics initiatives aligned with Staples' strategic priorities by delivering targeted insights that influenced category management, pricing optimization, and vendor-driven cost-efficiency strategies
- Synthesized complex statistical and SQL-based analyses into concise, business-friendly insights, directly informing executive decision-making around inventory risk, vendor compliance, and margin improvement opportunities
- Collaborated with cross-functional teams in pricing, category management, and BI to define core performance indicators and shape visual reporting assets that enhanced leadership's ability to track high-impact initiatives
- Engineered Snowflake-based data pipelines and SQL logic to automate the delivery of vendor performance and promotional ROI metrics, reducing ad hoc data requests by business teams and enabling faster decision cycles
- Performed deep-dive root cause analysis on vendor compliance data gaps, leading to the design of a centralized reporting framework that increased data reliability and eliminated recurring manual reporting bottlenecks
- Implemented data governance best practices within Alteryx workflows, introducing data validations and standardizing metric definitions to ensure consistency across stakeholder-facing reports and vendor dashboards

Business Analyst Intern, Revolutionary Integration Group Inc, Boston, United States

Technologies: MS Excel, Tableau, Power BI, Visual Studio

Sep 2020 – Aug 2021

- Conducted in-depth market characterization and pricing analysis across commercial and federal sectors, identifying differentiated pricing strategies for Dynamic Trust solutions based on value perception and market maturity
- Defined the competitive landscape by performing detailed research on trust-focused technologies, profiling direct and indirect competitors, and synthesizing strategic positioning insights to support go-to-market planning
- Deployed a market-entry framework that outlined direct sales, channel partner models, and alternative sales routes, aligning stakeholder goals with the most effective approach for each market segment
- Managed initial product discovery efforts for the healthcare vertical by translating domain-specific requirements into a functional product concept and formulating a phased rollout strategy aligned with regulatory and compliance needs
- Constructed compelling visual storyboards and early-stage dashboards using Tableau and Power BI, enabling executive teams to evaluate go-to-market opportunities through clear, data-backed narratives
- Collaborated with cross-functional stakeholders in product, sales, and operations to refine value propositions, define early success metrics, and identify adoption barriers across target markets
- Conducted SWOT analyses and created Excel-based financial impact models to estimate market potential, break-even timelines, and ROI forecasts across verticals including healthcare, defense, and enterprise tech
- Presented competitive insights and strategic recommendations in executive meetings, enhancing leadership's ability to assess market risks, refine messaging, and prioritize product development initiatives
- Explored integration of Power BI into stakeholder reporting workflows to support dynamic, interactive updates for client-facing insights and internal performance monitoring

BI / Tableau Developer, CA Technologies, Hyderabad, India

Technologies: Tableau Desktop, Tableau Server, Power BI Desktop, Windows

Jun 2018 – Jul 2019

- Analyzed and translated complex business requirements from cross-functional teams into scalable BI solutions, driving system redesigns to align with evolving data infrastructure and stakeholder priorities
- Instituted data connectors in Tableau and Power BI to integrate flat files, Excel, Oracle, SQL Server, and Google Analytics, enabling unified reporting across siloed business systems
- Sketched and deployed interactive dashboards in Tableau and MicroStrategy for retail store managers to monitor KPIs, visualize performance gaps, and track progress toward regional sales goals
- Developed Power BI reports pulling from diverse data sources to deliver dynamic visual insights for operations and product teams, improving reporting turnaround and decision speed
- Wrote and optimized advanced SQL queries for data extraction and transformation, including development of reusable stored procedures, views, triggers, and user-defined functions to support efficient reporting layers
- Visualized multi-level drill-down dashboards in Tableau using parameters, filters, and interactive actions to support detailed data exploration by leadership and functional managers
- Applied ETL techniques to extract, transform, and load operational data into staging areas and downstream warehouses, ensuring accuracy and availability of reporting datasets
- Documented Tableau Server architecture, scheduling configurations, and performance logs to support troubleshooting, scalability, and knowledge transfer across BI operations
- Facilitated end-user training on Tableau Desktop and Server, increasing adoption and enabling business users to self-serve performance reports, reducing ad hoc BI requests
- Supported production monitoring, access control, and performance tuning for Tableau Server and Power BI Service, ensuring high availability and user satisfaction

ACADEMIC PROJECTS

Public Bike-Share Usage Explorer (Python, MySQL, Tableau) Dec 2020

- Processed over **4.5 million bike-share trip records** using Python and MySQL, applying advanced data wrangling and cleaning techniques to prepare datasets for analysis
- Modeled the data into a **Snowflake schema** to support optimized querying, analytical flexibility, and clear separation between fact and dimension tables
- Engineered derived features including **trip duration buckets, weather classifications, and temporal dimensions** (hour-of-day, day-of-week, seasonality) to enhance exploratory analysis
- Calculated **station-level congestion metrics**, peak-time traffic patterns, and interstation flow statistics to inform resource allocation and improve urban mobility insights
- Designed **interactive Tableau dashboards** with **heatmaps, flow maps, and KPI cards** to visualize usage density, traffic bottlenecks, and time-based trends for city planning stakeholders
- Leveraged **window functions, CTEs, and geospatial join** in MySQL to analyze directional flow between docking stations and uncover usage imbalances by time and region

U.S. Census County Demographics Mini-Dashboard (Python, Census API, Tableau) May 2020

- Integrated U.S. Census API with Python to extract granular county-level demographic data across all 50 states, enabling automated, repeatable ingestion pipelines for scalable analytics use cases
- Performed data cleaning, transformation, and normalization using Pandas to convert raw Census API responses into structured formats suitable for demographic segmentation and statistical analysis
- Crafted a dynamic Tableau dashboard showcasing key metrics such as population density, median income, education levels, and age distribution, allowing users to explore demographic trends by geography
- Engineered interactive dashboard filters and drill-down capabilities, empowering users to compare county-level data across multiple dimensions and support location-based decision-making
- Joined multi-variable datasets using custom Python scripts to align Census data across years and geographies, optimizing for both exploratory data analysis and business intelligence storytelling
- Delivered a fully functional dashboard prototype simulating a client-facing solution for use cases such as retail site selection, regional targeting, and public sector resource allocation

Database management with MYSQL Dec 2019

- Authored and deployed a normalized relational database in MySQL, applying third normal form (3NF) principles to eliminate redundancy and ensure referential integrity across transactional tables
- Created robust SQL schemas with optimized indexing strategies, primary/foreign key constraints, and data type validations to support efficient data storage and retrieval
- Engineered complex SQL queries using **Common Table Expressions (CTEs), window functions (e.g., ROW_NUMBER, RANK), and correlated subqueries** to perform advanced analytics and multi-level aggregations
- Engineered views and stored procedures to encapsulate reusable logic and simplify reporting layers for business-facing applications
- Performed query optimization using **EXPLAIN plans**, refactored nested subqueries, and adjusted indexing to reduce query response time by over 60% in high-volume test environments
- Simulated real-world business scenarios by populating tables with synthetic data and conducting **transactional audits** using BEGIN, ROLLBACK, and COMMIT blocks to maintain data consistency and error handling
- Leveraged **JOINS, CASE expressions, grouping sets, and aggregate filtering with HAVING** to uncover actionable patterns and support decision logic within the database
- Designed and tested data integrity constraints and **triggers** to automate validation logic and enforce business rules at the database level

EDUCATION

Masters in Data Analytics, Northeastern University, Boston, Massachusetts, Dec 2021
Coursework (STEM): Statistical Modelling: Predictive Analytics, Big Data, Data Visualization, Data mining, Decision Support & Business Intelligence, Leadership in Analytics, Data Warehousing

Bachelor of Engineering in Information Technology, Pillai College of Engineering, Panvel, Maharashtra, May 2018
Coursework: Database Management, Computer Networks, Object-Oriented Programming, Java, Web technology, Data Structures & Algorithms

SKILLS

Programming Languages: Python, (NumPy, Pandas, Scikit-learn, NLTK, PyTorch, TensorFlow), R, Alteryx, SAS, Java, C
Data Processing: SQL, Spark, Whampipe, Cassandra, Azure AI Studio, MS SQL Server, NoSQL, AWS Cloud
Machine Learning: Regression, Classification, Decision Trees, Dimension Reduction (SVD, PCA), Deep Learning, CNN
Statistical Analysis: Causal Inference, Hypothesis Testing, Chi-Square, T-test, A/B Testing, Experiment Design
Data Visualization: Tableau, Power BI, D3Blocks, Google Looker Studio, Flourish
Data Analysis: Data Migration, Data Cleansing, Reports and Dashboards, Data Modeling, Data Storytelling
Cloud Technologies: AWS (EC2, S3, Glue, Lambda, Redshift, Athena), GCP, Snowflake, Azure
Collaboration: Slack, MS Excel, Tableau CRM, Copado, Change Sets, Jira
