

MANASA GANAPARTHI

475-351-4908 | manasa.ganaparthi11@gmail.com | [linkedin.com/in/manasa-ganaparthi](https://www.linkedin.com/in/manasa-ganaparthi)

PROFILE:

- Data Scientist with nearly 2 years of experience as a Junior Data Scientist at TCS and recently selected as a **Data Scientist Consultant I at First Horizon Bank**. With a master's in business Analytics and a bachelor's in computer science and Statistics.
- Expertise in data science methodologies, including data wrangling, statistical modeling, and predictive analytics.
- I am proficient in Python, R, SQL, Excel, and Tableau, with hands-on experience in machine learning algorithms such as Random Forest, Gradient Boosting, and Logistic Regression.
- Proven ability to transform large, complex datasets into actionable insights, using data visualization tools like Power BI and Tableau.
- I am skilled in data preprocessing, feature engineering, and applying advanced statistical techniques to ensure data quality and reliability.
- Experienced in developing, training, and deploying machine learning models for predictive analysis, customer segmentation, and risk assessment.
- Strong knowledge of A/B testing, hypothesis testing, and experimental design to evaluate and optimize business strategies.
- Demonstrated ability to collaborate with cross-functional teams, translating business requirements into data-driven solutions that improve performance metrics and decision-making processes.

EXPERIENCE

First horizon bank | Data Science Consultant I |

(June 2025-present)

- Performed advanced SQL querying to extract, cleanse, and transform large-scale datasets from relational databases, enabling efficient data preparation and analysis for modeling and reporting initiatives.
- Conducted exploratory data analysis and statistical modeling using Python libraries such as pandas, NumPy, scikit-learn, and Prophet to uncover trends, seasonality, and business drivers across multiple domains.
- Developed predictive models and time series forecasts using logistic regression, random forest, XGBoost, and ARIMA to support customer segmentation, operational planning, and performance optimization.
- Designed and delivered interactive dashboards in Power BI and Microsoft Fabric to present analytical insights, KPIs, and visual narratives tailored to business stakeholders and executive teams.
- Collaborated with cross-functional teams to gather business requirements, define success metrics, and ensure that analytical deliverables aligned with organizational goals and data governance standards.
- Participated in peer reviews of statistical models and data visualizations, contributing feedback on methodology, interpretability, and actionable value to enhance overall

analytical rigor.

- Automated data workflows and developed reusable Python scripts and ETL pipelines to support scalable and efficient model training, testing, and deployment processes.
- Utilized cloud platforms such as Microsoft Azure and Databricks for collaborative data processing, distributed computation, and model experimentation in secure, production-ready environments.

Tata Consultancy Services | Junior Data scientist

(Oct 2021- Apr 2023)

- Performed statistical analysis and hypothesis testing to validate and enhance credit scoring models and risk management strategies, ensuring regulatory compliance and improving model accuracy for financial decision-making.
- Built and deployed machine learning models for predicting consumer behavior, creditworthiness, and default risk using logistic regression, decision trees, and neural networks. Utilized Python, R, and SQL for data preprocessing, feature engineering, model training, and algorithm optimization.
- Developed and executed A/B testing frameworks to measure the effectiveness of marketing campaigns, product offerings, and customer engagement strategies. Interpreted test results to identify actionable insights, optimize campaign performance, and drive customer retention and conversion growth.
- Collaborated with product managers, financial analysts, and marketing teams to translate business objectives into data-driven solutions, providing insights that inform strategy, product development, and market positioning.
- Leveraged data visualization tools, including Tableau and Power BI, create dashboards and reports that clearly communicate complex insights to stakeholders. Conducted workshops and training sessions to enhance team data literacy and strategic decision-making.
- Continuously monitored and refined predictive models to ensure accuracy and relevance, employing cloud platforms such as AWS and Azure for scalable deployment, model management, and performance optimization.
- Applied data mining, segmentation analysis, and clustering techniques to identify key patterns and trends, enabling targeted marketing, improved risk assessment, and enhanced customer segmentation.
- Ensured high data quality and integrity through rigorous data cleaning, transformation, and validation processes, contributing to more accurate analytics and reliable decision-making.

EDUCATION

BACHELOR OF SCIENCE IN STATISTICS-Jagarlamudi Kuppuswamy Choudary college-India. (2018-21)

Majors: Applied statistics, Data analysis and computing, Mathematical Statistics.

MASTER OF SCIENCE IN BUSINESS ANALYTICS-University of New Haven-West haven, CT (2023-24)

Majors: Business Analytics, Operations and Supply-chains Management, Business forecasting.

SKILLS:

- Python Libraries: pandas, matplotlib, ggplot2, BeautifulSoup2, re, os
- Power Bi Tools: DAX, API, Power Query
- R Programming Packages: dplyr, shinny, ggplot2, tidyr
- SQL Software: SQLite, MySQL,
- Excel Tools: Pivot Table, Pivot Chart, VLOOKUP, HLOOKUP, VBA
- Big data: Spark, Hadoop
- machine learning libraries: Scikit learn, TensorFlow, PyTorch

PROJECTS:

Data Science Job market Eda – Personal Project – West Haven, CT

- Analyzed over 7,000 data science job listings using Python to identify key skills, qualifications, and experience needed in the analytics field. Parsed job data from various platforms to uncover trends and market demands.
- Applied advanced Regular Expressions (Regex) to extract critical job requirements such as skills, programming languages, education, and experience, providing insights into the most sought-after competencies in data science.

- Aggregated and visualized data using Python libraries (pandas, matplotlib, wordcloud) to perform statistical analysis and create visual representations of top skills, tools, and qualifications prioritized by employers.
- Compiled a detailed report summarizing findings on job market trends, segmented by geography, industry, and seniority, offering actionable insights for job seekers to align their resumes and skills with market needs.
- Delivered insights through interactive visualizations and concise summaries, aiding professionals and students in understanding evolving job requirements in the data science industry.

Fleetcor project: Cross-Sell Programs Account Monitoring- Pompea College of Business University of New Haven

- Collaborated on an industry project with Fleetcor Corporation, a global leader in business payments, to assess customer performance in cross-sell programs, recommend optimization strategies, and evaluate financial performance and risk.
- Developed a data model in SQL Server with over 20 entities, building relationships and processing billions of rows using SQL and SSIS ETL tools.
- Applied machine learning and statistical techniques, including Gradient Boosting Machines, CHAID, Decision Trees, Logistic Regression, Linear Regression, Random Forest, Key Influencers, K-means clustering, Auto ML, and Segmentation Analysis.
- Utilized R, Python, Power BI, and Excel for data analysis; created visualizations and dashboards with Power BI and Tableau.

Customer Sales Analysis – Personal Project – West Haven, CT

- Utilized SQL to extract data from 8 different related tables from customer sales databases using JOIN and VIEW
- Transformed and filtered data by using aggregating and filtering functions to improve reporting process
- Loaded and visualized data with Python to identify key business intelligence that can improve sales performance.

Instagram visualization project – Personal Project – West Haven, CT

- Analyzed Instagram data using Jupyter notebooks, improving data analysis proficiency for exploring social media trends.
- Extracted relevant features from Instagram data, such as likes, comments, and follower counts, to assess user engagement and content popularity.
- Conducted sentiment analysis on user comments and captions using natural language processing (NLP) techniques, gaining insights into audience sentiment and preferences.
- Employed clustering algorithms to segment Instagram users based on demographic or behavioral characteristics, facilitating targeted marketing strategies.

- Integrated external data sources, such as weather or events data, to contextualize Instagram trends and identify potential correlations.
- Created predictive models to forecast future Instagram engagement metrics, enabling proactive decision-making and campaign planning.
