SUMMARY

Full Stack Engineer with over **5+ years** of experience architecting, developing, and deploying high-availability, mission-critical systems in the **Financial** and **HR** sectors. Expert in **Python-based micro-services (Flask, Django, FastAPI)** and building resilient infrastructure on **AWS** using **Docker, Kubernetes, and Terraform**. Proven track record of optimizing system performance, leading code reviews to enforce best practices, and driving the end-to-end delivery of complex software solutions in fast-paced **Agile** environments.

EXPERIENCE

Python Backend Developer – Cloud & API Engineer | Charles Schwab | Dallas | October 2024 – May 2025

- Architected and developed production-grade **micro-services** using **Flask** and **Django** for a high-volume **trading platform**, processing over **10,000** transactions per minute with a **p99** latency of under **200ms**.
- Led design reviews for cloud-native architectures, influencing the selection of **AWS Lambda** for **event-driven processing** and **Amazon RDS** for transactional integrity, resulting in a **15%** reduction in operational costs compared to legacy EC2-based solutions.
- Automated critical data ingestion and reporting workflows using **Apache Airflow**, orchestrating complex **DAGs** that reduced manual processing time by **20 hours per week**.
- Engineered and managed **Infrastructure as Code (IaC)** using **Terraform** and **Helm** to provision and configure **AWS resources (API Gateway, Lambda, SQS, RDS)**, enabling fully automated, one-click environment deployments.
- Resolved **production incidents** by analyzing **CloudWatch** metrics and logs, implementing a fix in the **SQS** dead-letter queue handling logic that improved message processing reliability by **99.9%**.
- Developed robust **API** Design standards and implemented versioned RESTful endpoints with **OpenAPI/Swagger** documentation, supporting daily throughput of **1M+** requests over **24** months, ensuring reliable integration across distributed micro-services using **Flask** and **AWS API Gateway**.

Python Backend Developer | Husys – A People2.0 Company | Hyderabad | November 2022 – July 2023

- Engineered and maintained core backend services using **Django** REST Framework for Husys' multi-tenant **SaaS** HR platform, supporting critical modules such as payroll processing, attendance tracking, and employee lifecycle management for over **200** small-to-medium-sized businesses.
- Developed a key feature to automate statutory compliance calculations (**PF, ESI, PT**), which involved complex business logic and resulted in a **99.8% accuracy rate** in payroll generation, significantly reducing client-reported errors.
- Optimized database performance by identifying and refactoring inefficient **Django ORM queries** in the attendance module, reducing the **monthly report generation time** from **15** minutes to under **60** seconds.
- Overhauled the employee dashboard's architecture by replacing inefficient **REST** polling with an optimistic **UI** pattern using **React Query**, resulting in a **50% reduction** in perceived load times and a **30% decrease** in backend server requests.

Python Developer / Programmer Analyst | Cognizant Technology Solutions | Hyderabad | January 2020 – February 2022

- Developed and enhanced backend micro-services using **Django** for a high-traffic e-commerce platform, implementing new features for the **product search** and order processing modules that supported over **500,000** monthly transactions.
- Participated in security-focused code reviews, ensuring new **API** endpoints adhered to best practices for **token-based authentication (JWT)** and **secure session handling**.
- Partnered with the **frontend team** to co-develop the **API contract** for a new **checkout flow**, assisting with the **JavaScript** logic to handle **asynchronous inventory checks**, which helped reduce cart abandonment rates by **5%**.
- Contributed directly to the customer-facing storefront by fixing bugs in **React components** and implementing **data-fetching logic** to consume new backend endpoints, ensuring seamless feature integration.

Data Engineer | Tera Software Limited | Hyderabad | February 2019 – December 2019

- Implemented robust **ETL** workflows with **Python** and **SQL**, integrating data from several governmental sources into centralized databases to support downstream analytics.
- Utilized custom validation frameworks to detect and resolve inconsistencies across citizen records, enhancing overall dataset reliability.
- Assisted in automating **daily data ingestion processes** for **e-governance services**, which contributed to an **80% reduction** in manual processing and improved **data reliability**.

PROJECT

AI Autopilot System (FastAPI, DSPy, LangGraph, OpenAI, Pytest) | ETech 7 | github.com/Msreddy369 | April 2025 – May 2025

EDUCATION

Masters in Computer Science | University Of North Texas | Denton | 2023 – 2025 | 3.66

SKILLS

Languages: Python, Java, TypeScript, JavaScript (ES6+), SQL, Bash

Backend Development: Django, Flask, FastAPI, Node.js, RESTful APIs, GraphQL

Frontend Development: React (Redux Toolkit), HTML5, CSS3, D3.js, Jinja2

Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, API Gateway, SQS, SNS, Glue), Docker, Kubernetes, GitLab CI/CD, Jenkins, Prometheus, Grafana

Databases & Data Engineering: PostgreSQL, MySQL, MongoDB, Redis, SQL Server

AI & LLM Tooling: LangGraph, DSPy, OpenAI API

Developer Tools & Testing: Git, GitHub, JIRA, PyTest, UnitTest

Practices & Methodologies: Agile, Scrum, Test-Driven Development (TDD)
