PROFESSIONAL SUMMARY :

- Highly skilled **Full Stack Java Developer** with over 5 years of experience in building enterprise-grade applications, delivering scalable and high-performance solutions for clients across healthcare, banking, and e-commerce industries.
- Proficient in **Java, Spring Boot, Spring MVC, Spring Cloud, and Hibernate** for building robust and scalable backend services, ensuring smooth integration with multiple databases and third-party systems.
- Extensive experience working with **AWS** services like **EC2, Lambda, S3, DynamoDB, and RDS** for developing cloud-native applications that are scalable, cost-efficient, and easy to maintain.
- Experienced in building **cloud-based solutions** using **Spring Cloud** for configuration management, service discovery, and circuit breakers, ensuring the application can handle failures gracefully.
- Expertise in implementing **authentication and authorization** in applications using **Spring Security**, including integration of **OAuth2** and **JWT** for secure token-based communication.
- Hands-on experience working with **databases** such as **MySQL, PostgreSQL, Oracle, and MongoDB**, optimizing queries and managing data to ensure high performance and scalability.
- Strong background in **event-driven architecture** using **Apache Kafka**, enabling real-time data processing and streaming across multiple services.
- Efficient in developing **React** projects with library like **React-Redux** central state management and middleware like **Redux-thunk** for making asynchronous requests.
- Proven experience with **CI/CD pipelines** and **DevOps tools** such as **Jenkins**, and **Docker** to streamline code deployment and ensure seamless integration.
- Proficient in **unit testing** with frameworks like **JUnit** and **Mockito**, ensuring code reliability and reducing the risk of regression in production.
- Expert in debugging, troubleshooting, and **performance tuning** Java applications, ensuring optimal system performance and low response times under high traffic.
- Skilled in **RESTful API design**, following **API-first principles**, ensuring maintainable, versioned, and secure APIs.
- Adept at **message-driven development** using tools such as **RabbitMQ** and **Kafka**, enhancing asynchronous processing and message queue handling for large-scale systems.
- Developed batch processing solutions using **Spring Batch**, automating the processing of large volumes of data, ensuring efficiency and scalability in financial and healthcare systems.
- Implemented logging and monitoring solutions using **ELK Stack** (Elasticsearch, Logstash, and Kibana) to ensure full-stack observability and quick issue identification in production environments.
- In-depth knowledge of **containerization** using **Docker** and **Kubernetes**, enabling rapid deployment, scaling, and orchestration of applications in cloud environments.
- Actively participated in code reviews, sharing knowledge with peers and guiding junior developers on best practices in **Java development** and **Spring framework**.
- Extensive knowledge of **database sharding, indexing, and optimizing SQL queries**, ensuring high performance in large-scale data-driven applications.
- Collaborated with **Agile teams**, working closely with cross-functional stakeholders to deliver business-critical features on time.

TECHNICAL SKILLS:

- **Programming Languages:** Java 8/17, SQL, JavaScript, TypeScript, Bootstrap, Python, C, C++, HTML, CSS
- **Frameworks/Technologies:** Spring Boot, Spring MVC, Spring Cloud, Spring Batch, Spring Security, Spring Web Flux, Hibernate, JPA, RESTful Web Services, Microservices, Kafka, RabbitMQ
- **Cloud Technologies:** AWS (EC2, Lambda, S3, RDS, API Gateway), Azure, Google Cloud
- **Databases:** MySQL, PostgreSQL, Oracle, MongoDB, DB2, SQL Server, NoSQL Databases
- **Messaging & Event-Driven Systems:** Apache Kafka, RabbitMQ
- **CI/CD & DevOps Tools:** Jenkins, Maven, Gradle, Docker, Kubernetes
- **Testing & QA:** JUnit, Mockito, Postman
- **Version Control:** Git, SVN, Bitbucket
- **Architectures/Design Patterns:** Microservices, Event-driven Architecture, MVC, Singleton, Factory, Repository, Observer
- **Security:** OAuth 2.0, JWT, SSL Encryption
- **Development Tools & IDEs:** IntelliJ IDEA, Eclipse, Visual Studio Code
- **Monitoring & Logging (Optional Add):** Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana)

PROFESSIONAL EXPERIENCE:

Client: Trinity Health,

Jun 2024 - Present

Role: Full Stack Java Developer

- Developed and maintained software solutions within an **SDLC** Agile environment, participating in daily stand-ups, sprint planning, and retrospective meetings.
- Designed and implemented backend services using **Java 17, Spring Boot and Microservices architecture** to support high-volume patient records, scheduling, clinical workflows, and claims processing with scalable performance.
- Built **RESTful APIs** using Maven-based projects, enabling seamless integration between backend services and frontend applications.
- Designed and executed **RESTful** and **SOAP API** test cases using **Postman** to ensure reliable communication between clinical systems, patient management modules, and claims-processing services.
- Integrated backend services with **React**-based clinical and administrative dashboards, improving data access for nurses, physicians, and front-office staff.
- Developed **OAuth2**-protected **APIs** using Spring Security and configured resource servers to ensure secure, role-based access to patient data, clinical workflows, and administrative operations.
- Implemented **Kafka** producers and consumers to enable real-time event streaming for patient updates, appointment notifications, and claims workflow automation, improving system responsiveness and decoupling microservices.
- Developed and deployed **Spring Boot healthcare microservices** on **AWS EKS** with Kubernetes orchestration, improving scalability for patientcare and clinical-workflow modules.
- Designed and documented **RESTful APIs** using Swagger for clinical workflows, patient services, and claims modules, ensuring clear specifications for cross-functional healthcare teams.
- Designed and optimized **JDBC**-based data interactions for healthcare **APIs**, improving patient-record retrieval, appointment updates, and claims persistence performance.
- Developed **Spring Data JPA** repositories to simplify **CRUD** operations across patient records, appointment schedules, billing modules, and claims workflows.
- Configured **CI/CD** pipelines using **GitHub, Jenkins, Docker, and Kubernetes**, automating build, containerization, and deployment workflows to ensure consistent and reliable delivery of healthcare microservices.
- Implemented **MongoDB** for storing semi-structured patient records, clinical notes, and appointment metadata, optimizing document queries and improving retrieval speed across healthcare microservices.

- Wrote unit and integration tests using **JUnit and Mockito**, increasing confidence in releases and minimizing production defects.
- Monitored services using ELK and Grafana, improving incident detection, and reducing troubleshooting time for the support team.

Client: Fifth Third Bank,

Dec 2018 - Feb 2021

Role: Java Developer

- Participated in **Agile ceremonies** including standups, sprint planning, and reviews to ensure predictable delivery.
- Developed core banking microservices using **Spring Boot** and **Spring MVC**, contributing to the modernization of the bank's online platform.
- Designed and implemented **RESTful APIs** integrated with front-end systems to deliver real-time account and transaction data, improving load times noticeably.
- Designed and executed **RESTful API** test cases using Postman to validate service reliability and banking workflows.
- Built UI components in **React** and object-oriented JavaScript, ensuring smooth UI-to-API communication across banking modules.
- Implemented **Spring Security** with JWT to secure sensitive financial modules.
- Integrated **RabbitMQ** for asynchronous communication between distributed services to handle peak-time traffic more effectively.
- Integrated **Apache Kafka** to support real-time processing of high-volume transactions, reliably handling tens of thousands of events per hour during peak activity.
- Deployed microservices on **Azure VMs and Azure Kubernetes Service (AKS)**, improving scalability and reducing on-prem dependency.
- Documented API specifications using **Swagger**, enabling faster front-end and QA integration.
- Designed optimized **MySQL** schemas and tuned Hibernate queries for peak hours.
- Designed optimized database models using JPA, reducing heavy query execution time by around 40% for high-demand banking operations.
- Designed optimized database models using JPA for **CRUD-heavy** banking operations.
- Implemented **CI/CD** pipelines in Jenkins, cutting deployment time.
- Developed automated test suites using **JUnit and Mockito**, improving release confidence and reducing regression issues.
- Monitored system health and performance using **Prometheus and Grafana**, maintaining strong reliability across core banking services.

Client: Chewy

Jun 2017 - Dec 2018

Role: Java Developer

- Worked closely with product owners and QA teams in **Agile**, consistently delivering features aligned with customer expectations.
- Developed **Java Microservices** using Spring Boot to support order management, product catalog, and shipping workflows, helping stabilize core e-commerce operations.
- Built **RESTful APIs** integrated with catalog and inventory systems, improving product lookup performance and checkout flow responsiveness.
- Implemented **JWT + SSL** security across service endpoints, improving data protection during payment and ordering processes.
- Leveraged **RabbitMQ** for asynchronous order updates and workflow orchestration, improving system responsiveness during peak hours like promotions and holiday sales.
- Integrated **AWS S3** for scalable file and product asset storage, and deployed services on AWS EC2, increasing overall platform reliability.

- Optimized **JPA** queries and database access patterns, reducing query overhead, and improving page load times for customer-facing paths.
- Built automated **CI/CD** pipelines in Jenkins, enabling consistent deployment cycles and reducing manual deployment steps.
- Developed unit and integration tests using **JUnit** + **Mockito**, improving release quality and reducing post-deployment issues.
- Monitored service health and performance using **ELK**, helping identify and resolve issues quickly during traffic spikes.

EDUCATION:

Bachelor of Technology in Computer Science and Engineering- KL University, India

Master's in information systems –University of Texas at Arlington, Texas, USA
