

MANISH KANDUKURI

Ph: 857-379-0129

Email: kandukuri.maniish1@gmail.com

Professional Summary:

- A skilled Java Full Stack Developer with 3+ years of experience in Java 8/11, Spring Boot, Angular 8/17, React.js, and AWS to build scalable web applications. Proficient in designing Microservices, working with Hibernate, and implementing CI/CD pipelines for efficient software delivery.
- Extensive knowledge of Angular 8/17 for building modern, dynamic, and scalable single-page applications (SPAs) with a focus on performance and user experience.
- Skilled in leveraging the Angular 8/17 ecosystem, including Angular CLI, Angular Material, React.js, Redux, for efficient development and state management in front-end applications.
- Proficient in TypeScript and ES6+ for enhancing front-end code quality and scalability, ensuring smooth integration between the front-end and back-end.
- Proficient in Java 8/11, utilizing modern features such as streams, lambdas, and default methods to build efficient and maintainable applications.
- Expertise in designing and developing applications using Spring Boot with Microservices, providing a fast, robust, and scalable foundation for enterprise solutions.
- Strong experience in building microservices using Spring Boot and Spring Cloud, promoting modular and distributed application architectures.
- Experience in optimizing the performance of Java applications using profiling tools and various best practices, ensuring low latency and high throughput in cloud environments.
- Proficient in managing complex, distributed systems, ensuring fault tolerance, high availability, and reliability of cloud-based applications using AWS services like SQS, SNS, and API Gateway.
- Deep understanding of cloud-based architectures, with hands-on experience using AWS services like EC2, S3, RDS, and Lambda for scalable and cost-effective solutions.
- Expertise in integrating RESTful APIs with Angular 8 applications, ensuring seamless data exchange and communication between front-end and back-end services.
- Proficient in Hibernate ORM for database management and efficient object-relational mapping in Java applications, optimizing performance and reducing boilerplate code.
- In-depth experience with Spring Data for seamless integration with databases, leveraging its powerful querying capabilities and support for both SQL and NoSQL data sources.
- Extensive experience in building scalable and highly available microservices architectures using Spring Boot and leveraging tools like Eureka and Config Server for service discovery.
- Skilled in Spring Security for implementing secure authentication and authorization protocols in Java-based applications, including OAuth2 and JWT.
- Expertise in integrating AWS Lambda for serverless applications, reducing infrastructure overhead while enabling scalable solutions based on demand.
- Hands-on experience with AWS S3 for managing object storage, ensuring secure and scalable data storage for enterprise applications.
- Expertise in CI/CD pipeline management using Jenkins, automating the build, test, and deployment processes to achieve faster release cycles and maintain high-quality standards.
- Strong experience in managing Java-based projects with Maven, handling dependency management, and automating build processes for consistent project setups across environments.
- Familiar with Git and GitHub for version control, collaborating with cross-functional teams through effective branching strategies, pull requests, and continuous integration.
- Knowledge of Ant for build automation, managing project dependencies, and streamlining the build and deployment processes in Java applications.
- Strong background in working with both relational databases (like Oracle) and NoSQL databases (such as MongoDB and Cassandra), ensuring high performance and scalability.
- Proficient in JUnit for writing unit tests for Java applications, ensuring high code coverage, reliability, and functionality in the development process.
- Familiar with TestNG and Mockito for advanced testing frameworks, ensuring effective unit and integration testing in complex Java applications.
- Experienced in utilizing Karma and Jasmine for unit testing Angular 8 applications, ensuring high-quality, bug-free code across different browsers.
- Expertise in using Jira for project management and issue tracking, facilitating Agile workflows and ensuring effective collaboration across development teams.
- A collaborative team player with strong problem-solving abilities, excellent communication skills, and a commitment to delivering high-quality solutions.

Technical Skills:

Programming Languages	Java 8/11, TypeScript, JavaScript
Frameworks	Spring Boot, Spring MVC, Spring Security, Angular 8, Angular 17, React.js
Microservices	Spring Cloud, RESTful APIs, Service Discovery, API Gateway
Databases	Oracle, MongoDB, Cassandra, MySQL, PostgreSQL, AWS RDS
Cloud Technologies	AWS EC2, AWS S3, AWS Lambda, AWS RDS, AWS CloudWatch, AWS API Gateway
Build & Automation	Maven, Jenkins, Ant
Version Control	Git, GitHub, Bitbucket
Testing Frameworks	JUnit, Mockito, TestNG, Karma, Jasmine, Cucumber
Containerization & Virtualization	Docker, Kubernetes, AWS Elastic Beanstalk
Project Management	Jira, Agile/Scrum methodology

Professional Experience:

Client: Eastern Bank, Boston, MA

Project Name: Online Banking Modernization

Role: Java Full Stack Developer

Duration: June 2024 – Present

Project Overview:

This project aims to modernize the bank's online banking system to provide secure, scalable, and user-friendly digital banking services. The goal is to enhance customer experience, optimize performance, and ensure robust security compliance.

Key Contributions:

- **User Management Module:** Secure authentication, JWT-based authorization, multi-factor authentication (MFA).
- **Account Management Module:** View/manage accounts, real-time balance, transaction history.
- **Funds Transfer Module:** Internal and interbank transfers, scheduled payments.
- **Bill Payment Module:** Third-party biller integration, recurring transactions.
- **Loan & Credit Card Management:** Online loan applications, EMI calculations.
- **Notifications & Alerts:** Real-time SMS/email alerts using AWS SES/SNS.
- **Customer Support & Chatbot:** AI-powered chatbot, live customer support chat.
- **Security & Compliance:** TLS/SSL encryption, fraud detection, regulatory compliance.

Responsibilities:

- Collaborated with business analysts, stakeholders, and product owners to gather and define clear functional and non-functional requirements for Java-based applications.
- Collaborated with front-end teams to ensure seamless integration of Java 11-based back-end systems with front-end technologies, providing clear API documentation for UI integration.
- Created and documented UML diagrams, including class, sequence, and component diagrams, to outline system design and ensure proper understanding across teams.
- Developed dynamic, responsive, and scalable single-page applications (SPAs) using Angular 17, leveraging its powerful features such as two-way data binding, dependency injection, and lazy loading for improved performance and user experience.
- Worked with TypeScript with Angular to build robust, type-safe applications, enhancing code maintainability, scalability, and reducing runtime errors.
- Designed high-level system architectures, focusing on modularity, scalability, and maintainability using Java and Spring Boot to meet business requirements.

- Utilized Angular CLI for efficient project scaffolding, code generation, and automated build processes, ensuring streamlined development, testing, and deployment workflows.
- Integrated Angular Material components to create intuitive, modern UI designs with consistent user interactions, optimizing user experience with built-in accessibility features.
- Designed and implemented scalable microservices using Spring Boot and Spring Cloud, ensuring decoupling of services, enabling independent deployment, and improving the overall system's scalability and fault tolerance.
- Leveraged AWS API Gateway to manage API routing, versioning, and security for scalable cloud-based applications.
- Developed robust RESTful APIs with Spring Boot to expose business logic and integrate with external systems and third-party services.
- Designed and deployed Java-based applications on AWS using services like AWS EC2, AWS S3, and AWS Lambda for serverless computing and scalable storage.
- Automated deployment workflows using AWS Elastic Beanstalk and Docker, ensuring continuous delivery and simplified application management.
- Utilized Git, GitHub, and AWS CodeCommit for source code management, ensuring proper version control, branch management, and collaboration among development teams.
- Implemented AWS IAM for role-based access control, enforcing security policies, and ensuring secure communication between microservices and cloud resources.
- Built and maintained CI/CD pipelines using Jenkins, AWS CodePipeline, and Docker, automating code integration, testing, and deployment processes to ensure faster release cycles.
- Utilized Maven as the build automation tool for managing project dependencies, compiling code, and generating artifacts.
- Designed efficient and scalable database schemas using MySQL, PostgreSQL, and Amazon RDS for storing and managing structured data.
- Implemented Object-Relational Mapping (ORM) using Hibernate and JPA, optimizing database interactions and improving query performance.
- Implemented unit, integration, and functional tests using JUnit, Mockito, and Cucumber, ensuring that the application met functional requirements and free of defects.
- Managed and tracked bug reports and issues in Jira, ensuring timely resolution by assigning priorities, categorizing, and assigning tasks to appropriate team members for quick fixes.

Environment: Agile/Scrum, Java 11, Spring Boot, Spring Cloud, Angular 17, TypeScript, Angular CLI, Angular Material, Microservices, RESTful, AWS, EC2, S3, Lambda, Elastic Beanstalk, CodeCommit, IAM, CodePipeline, Git, GitHub, Docker, Maven, MySQL, PostgreSQL, RDS, Hibernate, JPA, JUnit, Mockito, Cucumber, Jira.

Client: Coverys, Boston, MA

Project Name: Risk Management and Analytics System

Role: Java Full Stack Developer

Duration: Jan 2023 – Dec 2023

Project Overview:

Developed a risk management and insurance analytics system for healthcare providers.

Key Contributions:

- **User Management Module:** Secure login, user role management, and authentication.
- **Data Analytics Module:** Real-time risk assessment and data visualization.
- **Claims Management:** Automated claims processing and fraud detection.
- **Notifications & Reports:** Email alerts and PDF reporting generation.
- **Cloud Deployment:** AWS Lambda, API Gateway for scalable microservices.

Responsibilities:

- Followed Agile/Scrum methodology within the SDLC, collaborating with cross-functional teams to iteratively deliver Java-based application.
- Analyzed business needs and created detailed technical documentation to ensure alignment with project goals and scope.
- Developed dynamic, user-friendly React.js applications, leveraging the full React ecosystem including React Router for navigation, Redux for state management, and Webpack for optimized bundling and asset management.
- Integrated React.js with Spring Boot to create seamless, full-stack web applications, enhancing the user interface with Material-UI and ensuring responsive design across devices.
- Implemented React.js hooks like useState and useEffect for handling state and side effects, improving performance and simplifying component logic.
- Developed and maintained enterprise-level applications using Java 11, incorporating new language features like enhanced pattern matching, var keyword, and record types to improve code readability and reduce boilerplate.
- Designed and implemented Spring Boot applications for building microservices, using its auto-configuration, embedded web server, and integrated components to reduce setup time and enhance application performance.
- Architected and deployed microservices using Spring Cloud, enabling decentralized management and easier scaling, with services communicating via RESTful APIs and Spring Security for authentication and authorization.
- Developed robust communication between microservices through RESTful APIs and message brokers like RabbitMQ, and Kafka.
- Integrated AWS services like EC2 for scalable compute capacity, S3 for secure storage, RDS for relational databases, and Lambda for serverless compute, optimizing cost efficiency and scalability of Java applications.
- Implemented AWS API Gateway for managing and exposing microservices, ensuring secure, reliable, and scalable API access, while using AWS CloudWatch for application monitoring and troubleshooting in real time.
- Configured Hibernate for efficient ORM (Object-Relational Mapping), mapping Java objects to database tables, and reducing boilerplate code for database operations.
- Optimized data access and query performance with Hibernate, leveraging techniques such as lazy loading, caching, and batch fetching to handle complex relationships between entities.
- Integrated Cassandra as a NoSQL database to handle large-scale, high-velocity data, ensuring high availability, fault tolerance, and horizontal scalability for big data applications.
- Implemented MongoDB for flexible, document-oriented NoSQL storage, optimizing data retrieval and storage operations with a schema-less design that can handle unstructured data.
- Configured and maintained Jenkins pipelines for continuous integration and deployment (CI/CD), automating build, test, and deployment processes for efficient and reliable code delivery.
- Used Maven for project build automation, dependency management, and packaging Java applications, ensuring a smooth build process and integration with the overall development lifecycle.
- Managed version control with Git, facilitating collaboration and code review using branching strategies, pull requests, and rebasing to streamline development and prevent conflicts.
- Utilized React Testing Library and Jest for unit and integration testing, ensuring that React.js components were functional and bug-free before deployment.
- Developed and executed unit tests using JUnit and integrated Mockito for mocking dependencies in tests, ensuring code quality, functionality, and robustness of Java applications.
- Utilized Jira to monitor the lifecycle of defects from identification to resolution, creating detailed tickets, providing status updates, and ensuring that critical bugs were addressed before release.

Environment: Agile/Scrum, React.js, React Router, Redux, Webpack, Material-UI, Java 11, Spring Boot, Microservices, Spring Cloud, Spring Security, RESTful APIs, RabbitMQ, Kafka, AWS EC2, AWS S3, AWS RDS, AWS Lambda, AWS API Gateway, AWS CloudWatch, Hibernate, Cassandra, MongoDB, Jenkins, Maven, Git, React Testing Library, Jest, JUnit, Mockito, Jira.

Client: Tata Consultancy Services (TCS), Hyderabad, India

Project Name: Internal Process Automation System

Role: Java Full Stack Developer

Duration: Jun 2021 – Aug 2022

Project Overview:

Developed and maintained dynamic web applications for internal process automation.

Key Contributions:

- **User Management Module:** Secure authentication and role-based access control.
- **Workflow Automation Module:** Automating internal processes for operational efficiency.
- **Task Scheduling & Notifications:** Automated task assignments with reminders.
- **Data Management Module:** Centralized storage and retrieval system with MySQL.
- **CI/CD & Deployment:** Implemented automated builds and deployments using Jenkins.

Responsibilities:

- Actively participated in all phases of the Software Development Life Cycle (SDLC) – Agile/Scrum, from gathering requirements and system design to development, testing, deployment, and maintenance.
- Developed dynamic front-end applications using Angular 8, implementing features such as component-based architecture, data binding, and routing to enhance user experience and scalability.
- Utilized Angular CLI to streamline project setup, generate components, and manage dependencies, optimizing development workflow and maintaining consistent project structures.
- Created responsive, cross-platform user interfaces with Angular 8 and Angular Material, incorporating material design components to provide a modern and intuitive user experience.
- Implemented business logic and core functionalities using Java and Spring Framework, ensuring adherence to coding standards and best practices.
- Developed robust and scalable applications using Java 8, leveraging features like streams, lambdas, and default methods to enhance code readability, reduce boilerplate, and improve overall application performance.
- Utilized Spring Boot to design and develop microservices, taking advantage of its embedded web server and auto-configuration features to reduce setup time and simplify deployment processes.
- Implemented Microservices architecture with Spring Cloud, enabling service discovery, centralized configuration, and fault tolerance, ensuring seamless communication between distributed services.
- Integrated AWS EC2 for scalable cloud infrastructure, AWS S3 for secure object storage, and AWS RDS for managed relational databases, providing cost-effective and highly available solutions.
- Managed project builds and dependencies with Ant, automating the build process, compiling Java code, and packaging the application to ensure smooth and efficient deployment.
- Collaborated using GitHub for version control, implementing Git workflows such as feature branching, pull requests, and code reviews to maintain code quality and foster collaboration.
- Configured and maintained Jenkins pipelines to automate continuous integration (CI) and continuous deployment (CD), improving efficiency and ensuring rapid, reliable releases of software.
- Implemented Hibernate ORM for seamless mapping of Java objects to database tables, optimizing data access and simplifying database interactions while maintaining performance.
- Designed and implemented database schemas in Oracle, ensuring data integrity, optimizing queries, and leveraging advanced features like stored procedures and triggers to support enterprise applications.
- Integrated unit testing in Angular 8 using Karma and Jasmine, ensuring high-quality code and preventing regressions by running tests in multiple browsers and devices.
- Created and executed unit tests with JUnit to ensure Java application functionality, improving code reliability and maintainability by identifying issues early in the development cycle.
- Utilized Jira for issue tracking, project management, and sprint planning in an Agile environment, ensuring efficient tracking of tasks, bugs, and feature requests across cross-functional teams.

Environment: SDLC, Agile/Scrum, Angular 8, Angular CLI, Angular Material, Java 8, Spring Framework, Spring Boot, Microservices, Spring Cloud, AWS, EC2, S3, RDS, Ant, GitHub, Jenkins, Hibernate, Oracle, Karma, Jasmine, JUnit, Jira.

Education

Master of Science in Computer Software Engineering

Northeastern University, Boston, MA

Duration: Sep 2022 – May 2024
