

Manisha Machanagari

Python Full Stack Developer

+1 (667)-261-5323 | manishamachanagari@gmail.com

LinkedIn: <https://www.linkedin.com/in/manisha-machanagari/>

PROFESSIONAL SUMMARY

- **Full Stack Python Developer** with **5 years** of experience in **designing, developing, and deploying end-to-end web applications** using **Django, Flask, and Pyramid** frameworks.
- Proficient in building scalable **RESTful APIs** and integrating **third-party** services using **JSON, XML, and GraphQL** for seamless **front-end/back-end communication**.
- Skilled in **front-end** development using **AngularJS, JavaScript, HTML5, CSS3, Bootstrap, and jQuery** to create responsive, dynamic, and **mobile-friendly** UIs.
- Advanced experience in server-side **programming** and **microservices architecture**, following the **MVC** pattern and **OOP** best practices.
- Strong background in **SQL** and **NoSQL** database management, including **MySQL, PostgreSQL, MongoDB, Oracle, and Aurora**, with expertise in **query optimization** and stored procedures.
- Experienced in deploying applications on **cloud platforms** like **AWS (EC2, S3, RDS, Lambda), Azure, and Heroku** for scalable and secure solutions.
- Hands-on expertise in **DevOps tools** including **Docker, Jenkins, Ansible, Kubernetes, and AWS CLI** for **CI/CD, containerization, and automated** deployments.
- Proficient in **data analysis, transformation, and visualization** using **Python libraries** such as **Pandas, NumPy, SciPy, Matplotlib, Plotly, and PySpark** for **data-driven applications**.
- Extensive experience in **agile software development life cycle (SDLC) methodologies**, including **Agile, Scrum, and Test-Driven Development (TDD)**.
- Familiar with modern **version control** and collaboration tools like **Git, Bitbucket, SVN, Jira, and Confluence** for efficient **code management** and team workflows.
- Experienced in integrating **machine learning pipelines** and **big data** processing into **web applications** using **PySpark** and **data wrangling** techniques.
- Adept at building **secure applications** with role-based **access control, API authentication, exception handling, and performance monitoring**.
- Expertise in **web scraping** and **automation** using **BeautifulSoup** and **Python** scripts for **data ingestion, manipulation, and reporting**.
- Strong **problem-solving, debugging, and optimization** skills across **front-end** and **back-end** layers, ensuring high availability and low latency systems.
- Excellent **communicator** with **cross-functional team collaboration** experience, **committed** to delivering high-**quality, maintainable, and scalable** code.

TECHNICAL SKILLS

Programming Languages	Python, Java, C, C++, SQL, PL/SQL, PHP, R
Web Frameworks & Libraries	Django, Flask, Pyramid, Django Rest Framework (DRF), Celery, PySpark
Front-End Technologies	HTML5, CSS3, JavaScript, AngularJS, ReactJS, jQuery, AJAX, Bootstrap, DHTML, DOM
Back-End & Middleware	RESTful APIs, SOAP APIs, J2EE (JSP, Servlets), JDBC, JNDI, MVC Architecture, Microservices
Cloud Platforms	Amazon Web Services (AWS EC2, S3, RDS, Lambda, CloudWatch), Microsoft Azure, Heroku
Database & Data Storage	MySQL, PostgreSQL, Oracle, SQL Server, MongoDB, Aurora, DB2, SQLAlchemy
Data Analysis & Big Data	Pandas, NumPy, SciPy, PySpark, Excel Data Extracts, Data Wrangling, Data Transformation
Data Visualization & Reporting	Matplotlib, Plotly, Highcharts, Seaborn
DevOps & CI/CD Tools	Docker, Jenkins, Kubernetes, Ansible, AWS CLI, GitHub Actions
Version Control & Collaboration	Git, Bitbucket, SVN, CVS, Jira, Confluence, Asana, Basecamp
API Development & Integration	REST APIs, SOAP APIs, GraphQL, JSON, XML, API Authentication, Web Scraping
Server & Application Hosting	Apache Tomcat, Nginx, WebLogic, Unicorn, uWSGI

Testing & Automation	Unit Testing, Integration Testing, Test-Driven Development (TDD), Postman, PyTest
Security & Authentication	OAuth 2.0, JWT, SSL/TLS, Role-Based Access Control (RBAC)
Operating Systems	Windows, Linux (Ubuntu, CentOS), Unix, Solaris
Developer Tools & IDEs	VS Code, PyCharm, Eclipse, JDeveloper, Sublime Text, Spyder, PL/SQL Developer
Development Methodologies	Agile, Scrum, SDLC, Continuous Integration (CI), Continuous Deployment (CD)
Other Tools & Libraries	BeautifulSoup, Faker, Urllib, Urllib2, Python-Twitter, PyPandoc, NetworkX, Collections (Python), Multi-threading, Exception Handling

PROFESSIONAL WORK EXPERIENCE

State Farm | Python Full Stack Developer | Addison, TX

Nov 2023 – Present

Responsibilities:

- Built **Python**-based **web applications** using **Django** and **Flask** with **MVC architecture**, improving **code reusability** and application performance.
- Developed scalable **RESTful APIs** and **microservices** to enable communication across **front-end** and **back-end** components.
- Designed and implemented dynamic **UI** features using **AngularJS**, **HTML5**, **CSS3**, **Bootstrap**, and **JavaScript** for improved **user interaction**.
- Created and integrated **backend logic** using **Django ORM** and **PostgreSQL/MySQL** for real-time **data** operations.
- Enhanced **data analytics pipelines** using **Pandas**, **NumPy**, and **PySpark**, improving processing efficiency by 35%.
- Developed and deployed interactive dashboards using **Matplotlib** and **Plotly** for internal reporting and exploratory **data analysis**.
- Containerized **applications** with **Docker** and automated deployments via **Jenkins pipelines**, reducing deployment time by 40%.
- Utilized **AWS services (EC2, S3, RDS)** for application **hosting**, **file storage**, and **database management**, ensuring system scalability.
- Performed **web scraping** using **BeautifulSoup** and **Requests** for **data ingestion** and reporting from external sources.
- Applied **Agile** and **Scrum principles**, participating in **sprint planning**, **stand-ups**, and **backlog** grooming to ensure on-time delivery.
- Managed **source control** using **Git** and **Bitbucket**, collaborating via **Confluence** and **Jira** for team-based development.
- Implemented **API security** through **OAuth 2.0** and **token-based authentication** to protect sensitive customer data.
- Automated **data ingestion** and transformation processes using **Python scripts** and **SQL queries** to streamline batch operations.
- Refactored legacy **code** to improve maintainability and **system reliability** by 25%.
- Used **PySpark** and **SQL** for **ETL** operations on **large datasets**, reducing **data processing** time from hours to minutes.
- Contributed to **test-driven development (TDD)** practices, increasing **code coverage** and reducing **post-release** defects by 30%.

Environment:

Python, Django, Flask, AngularJS, HTML5, CSS3, Bootstrap, JavaScript, PostgreSQL, MySQL, AWS EC2, S3, RDS, Docker, Jenkins, Git, Bitbucket, Pandas, NumPy, PySpark, Matplotlib, Plotly, BeautifulSoup, Agile, Jira, Confluence

Manomay Insurtech | Python Full Stack Developer | Hyderabad, India

Apr 2021 – Nov 2022

Responsibilities:

- Built **full-stack web** applications using **Django** and **AngularJS** to support **business operations**, increasing client efficiency by 30%.
- Created robust **REST APIs** with **Django Rest Framework** and consumed external **APIs** using **JSON/XML** for third-party integration.
- Designed and maintained **MySQL** database schemas and implemented stored procedures and indexing to reduce **query** time by **20%**.
- Enhanced user interface with **HTML5**, **CSS3**, **JavaScript**, and **Bootstrap**, achieving a **35%** increase in mobile responsiveness.

- Automated **backend** tasks using **Python scripts** for **data cleaning** and **transformation**, reducing manual workload by 50%.
- Generated **business reports** using **Matplotlib** and **Highcharts** for stakeholder analysis and **decision-making**.
- Employed **Git** for source control and collaborated via **Bitbucket** to ensure clean and trackable **code merges**.
- Utilized **AWS EC2** and **S3** for cloud-hosted deployment of services and **secure** storage of files and documents.
- Improved **API performance** by 20% through response optimization and **Django** middleware tuning.
- Conducted **unit testing** and **code reviews** to ensure **software quality**, resulting in 95% successful **sprint** completions.
- Streamlined **DevOps** processes using **Docker** containers and **Jenkins** for **CI/CD pipeline** implementation.
- Participated in daily **Agile ceremonies** to manage feature delivery and **issue** resolution effectively.
- Used **Pandas** and **NumPy** for structured **data analysis**, contributing to **predictive reporting modules**.

Environment: Python, Django, AngularJS, HTML5, CSS3, Bootstrap, JavaScript, MySQL, AWS EC2, S3, Django Rest Framework, Git, Bitbucket, Matplotlib, Highcharts, Pandas, NumPy, Docker, Jenkins, JSON, XML, Agile, Jira

ADP Technologies | Python Developer | Hyderabad, India

Sep 2019 – Mar 2021

Responsibilities:

- Developed **backend** systems using **Flask** and **Python** for **HR modules**, increasing **task automation** efficiency by 25%.
- Designed responsive **UIs** with **HTML5**, **CSS3**, **Bootstrap**, and **JavaScript** to support internal admin portals.
- Implemented **RESTful API endpoints** and integrated them with **AngularJS front-end** systems.
- Automated data extraction and **web scraping** workflows using **BeautifulSoup**, saving 40% of manual data entry effort.
- Configured **MySQL** databases and optimized **SQL queries** for faster **data retrieval** and system **stability**.
- Deployed applications on **AWS EC2** instances and configured auto-scaling groups for high availability.
- Managed **CI/CD** using **Docker** for containerization and **Ansible** for automated **configuration**, reducing deployment time by 30%.
- Applied **Agile** development practices with **sprint planning**, retrospectives, and daily stand-ups for rapid delivery.
- Built authentication **modules** with session and token-based **security** for user **authorization**.
- Documented **technical** processes and created **support documentation** for handover and **onboarding**.

Environment: Python, Flask, HTML5, CSS3, JavaScript, Bootstrap, AngularJS, MySQL, AWS EC2, Docker, Ansible, BeautifulSoup, Agile, Jira, Git

EDUCATION

- **Master of Information Technology and Management** from Concordia University, St. Paul, MN.
- **Bachelor of Technology in Electrical and Electronics Engineering** from Hyderabad Institute of Technology and Management, Hyderabad, India.
