

SUMMARY

Software Engineer with 5 years of experience specializing in robust and scalable web application development. Proficient in Core Java, Java 8, Spring MVC, Spring Boot, and Spring Security. Expertise in Microservices architecture implementation adhering to industry best practices. Extensive hands-on experience with Hibernate, JPA, Servlets, JSP, JSTL, JavaBeans, HTML, CSS, JavaScript, jQuery, JSON, and MySQL for dynamic and efficient application development. Skilled in optimizing database structures for enhanced performance. Proficient in UML for complex system design and utilizing Maven for streamlined project builds. Experienced in CI/CD using Jenkins and writing unit tests with Junit. Proficient in Git for version control and managing collaborative code repositories. Committed to delivering high-quality software solutions and continuously exploring emerging technologies for Java development innovation.

EXPERIENCE

ServiceNow, WA - Software Engineer

Nov 2024 – Present

- Working in all phases of the Software Development Life Cycle (SDLC) using Agile Methodology.
- Spearheaded the design and implementation of Java-based Microservices architecture, ensuring scalability and efficiency in handling complex business processes.
- Implementing Hibernate and JPA for seamless and efficient data persistence, optimizing database interactions in MySQL.
- Designing and implementing responsive user interfaces using HTML, CSS, JavaScript, Bootstrap, and jQuery, resulting in a 25% improvement in user engagement.
- Implementing advanced app analytics and performance monitoring using tools such as Firebase and Apple's App Analytics, resulting in a 40% improvement in app stability and a 25% increase in user engagement.
- Integrating JSON and XML for data interchange between the server and client enhances the applications' overall flexibility and interoperability.
- Employing Git for version control and collaborated on GitHub, ensuring effective code management and collaboration within the development team.

T-Mobile, WA - Associate Software Engineer

Sep 2023 - Nov 2024

- Engineered customer-centric web applications using Django and JavaScript, contributing to a 15% revenue growth by enhancing user experience with intuitive UI/UX designs.
- Working on multiple projects in parallel and collaborating directly with cross-functional Agile teams.
- Developed and maintained the Engineering Unlock Platform (EUP) to process unlocks in proactive and reactive flows, ensuring seamless functionality and user satisfaction.
- Utilized Splunk to create detailed charts and dashboards for monitoring system performance and analyzing key metrics.
- Successfully migrated legacy applications to modern architecture, adopting Spring MVC, Spring Boot, and Microservices, reducing response time and improving scalability.
- Designed and implemented REST APIs to optimize processes, resulting in fewer calls and improved efficiency.
- Collaborated within Agile teams, employing Jira for task management and tracking project progress.
- Leveraged Kubernetes for container orchestration, enhancing scalability and deployment processes.
- Secured sensitive credentials using CyberArk, ensuring robust protection of usernames and passwords.
- Worked with GitLab for version control and CI/CD pipeline management to streamline development workflow.
- Applied expertise in Java and SQL to build and maintain high-performance, reliable backend systems.

T-Mobile, WA - Intern Software Engineer

June 2023 - Aug 2023

- Assisted in maintaining the Engineering Unlock Platform (EUP) by supporting unlock processes in proactive and reactive flows.
- Assisted in ticket resolutions for manual unlocks for devices.
- Supported REST API development by performing testing and identifying areas for optimization, contributing to reduced calls.
- Gained hands-on experience with Kubernetes and deployment practices.
- Assisted in performing basic version control tasks and supporting CI/CD pipeline configurations.
- Utilized Java to perform debugging and implement minor updates in backend systems

DXC Technology, WA - Software Developer

Jan 2020 – June 2023

- Developed and maintained web applications using Core Java, Java 8, and the Spring framework, including Spring MVC, Spring Boot, and Spring Security, resulting in a 20% improvement in overall system performance.
- I utilized Servlets, JSP, and JSTL for server-side development, ensuring dynamic content generation and seamless integration with front-end components.
- Implemented JDBC for efficient and secure database connectivity, contributing to a 30% reduction in data retrieval time.
- Utilized Maven for project build management, streamlining the build process and ensuring consistent project structure.
- Configured automated build jobs using Jenkins, enhancing the efficiency of the continuous integration and delivery pipeline.
- Improved code quality by implementing unit testing, integration testing, and code review processes using GitLab and Jenkins. Mentored junior engineers on best practices and provided technical guidance.

SKILLS

Languages Methodologies: Core Java, Java8, SQL, C++, SDLC, Agile, Waterfall, Python, Swift, Kotlin, TypeScript

Frameworks: Spring MVC, Spring Boot, Spring Security, Microservices, JSF, Hibernate, JPA

J2EE Technologies: Servlets, JSP, JSTL, JavaBeans, JDBC

Web Technologies: HTML, CSS, JavaScript, Bootstrap, jQuery, Ajax, JSON, XML

Application Server s Build tools: Apache Tomcat, Web Sphere, UML, MS Visio, Maven, Gradle, Jenkins, Junit

Databases s IDEs: MySQL, PostgreSQL, NoSQL, NetBeans, IntelliJ IDEA

Version Control Tools s Operating Systems: Git, GitHub, Windows, Linux, iOS

PROJECT

E-Commerce Application - SpringBoot, Kubernetes, Rancher, Containers, CI/CD pipeline, RESTfulAPI

- Designed and deployed a scalable, high-performance e-commerce platform using Spring Boot and Kubernetes, ensuring seamless user experience and 99.95% uptime during high-traffic sales events.
- Developed key microservices, including cart, search, and order management, leveraging RESTful APIs and JPA, resulting in a 60% improvement in system efficiency.
- Integrated AWS services such as S3, EC2, RDS, and IAM, optimizing performance and enhancing security, leading to a 70% boost in operational throughput.
- Implemented a CI/CD pipeline for automated testing and deployment, reducing release cycle time by 50% and enabling faster feature rollouts.

Restaurant Review and Search Webpage - Tailwind CSS, MongoDB

- Engineered a dynamic restaurant web application utilizing React.js and Tailwind CSS for a modern and responsive frontend, alongside Node.js and Express.js for a robust and scalable backend architecture.
- Implemented MongoDB for efficient and flexible data storage, leading to a 40% enhancement in user interaction and data storage efficiency, thus ensuring seamless and performance application experience.

EDUCATION

Bachelor in Computer Science & Software Engineering

Aug 2023

University of Washington - Bothell, Washington
