SOFTWARE ENGINEER

Self-motivated, and self taught software engineer passionate about music and creating efficient, accessible, and visually appealing web applications. Experience includes application testing, development, cloud-based deployment, and WCAG 2.0+ accessibility standards compliance.

TECHNICAL SKILLS

• JavaScript	• TypeScript	• HTML	• CSS	• SASS	• Tailwind	• Next.js	• React.js	• Express.js	• Node.js
• GraphQL	• Java	• Python	• MongoDB	• MySQL	• PostgreSQL	• Prisma	• Firestore	• Jest	• Cypress
• Docker	• Postman	• Git	• GitHub	• Bitbucket	• Jira	• JUnit	• AWS	• Nomad	• GCP
• Heroku	• Netlify	• Storybook	• Linux	• Figma	• Selenium	• Jenkins	• CircleCI	• Sanity	• Webpack

EDUCATION

Bachelor of Science, Information Management and Technology - SYRACUSE UNIVERSITY

PROFESSIONAL HISTORY

Full Stack Software Engineer | JPMorgan Chase | Present

- Developed high-scale front-end solutions for Chase.com's personal and commercial banking platforms, optimizing user experience and performance for millions of users with React, Next.js, and modern web technologies.
- Created custom application to generate realistic test data, generate test cases, track test coverage/results, enabling more efficient E2E testing and reducing debugging time across teams by 50%.
- Designed and implemented backend RESTful microservices for Chase.com using Java and Node.js, following TDD principles
- Developed and maintained frontend test suites using Jest, React Testing Library, and Cypress to ensure frontend reliability and reduce production bugs by 40%.
- Created framework and libraries using Javascript/Typescript, Next.js and React used for the digital experience of Chase Personal and Commercial Banking to improve engineering productivity and code quality by 60%
- Modeled and optimized data schemas for high-throughput PostgreSQL services to support scalable, secure banking APIs integrated across multiple business segments.
- Improved accessibility standards following WCAG 2.1 AA guidelines by conducting audits, enhancing keyboard navigation, and integrating accessibility checks into CI pipelines.
- Boosted collaboration across engineering and design by establishing front-end best practices and aligning mockups with implementation, increasing story output by 67%

Full Stack Software Engineer | Musicbuk | July 2022-July 2023

- Designed and developed entire media and musician engagement platform using React.js /Next.js Javascript/Typescript with Storybook to streamline development process and improve collaboration within team.
- Created RESTful backend microservices utilized by application using Typescript, Node.js + Express.js Frameworks and integrating with Google Cloud Platform and Firestore.
- Built reusable component test cases with Jest and Storybook for visual and unit testing, improving UI regression coverage by 70%.
- Implemented standards for coding, testing and maintenance of application and deployment process.
- Implemented authentication including Single-Sign-On (SSO) with OAuth 2.0, OpenID Connect, and SAML.

Full Stack Software Engineer (Part-Time Contract) | Blue Dot Sessions | July 2022 – October 2022

- Worked cross-functionally with design team to convert Figma prototypes into pixel-perfect, responsive interfaces used for editing and publishing tracks using Javascript,Typescript, HTML5, CSS3, React.JS and Javascript audio libraries.
- Utilized Redux for state management and implemented middleware for asynchronous actions.
- Created microservices to upload and search for tracks using Node.js, GraphQL and Typescript using AWS ECS/ECR/Fargate with Elasticsearch running on AWS OpenSearch, that interacted with Strapi CMS and Stripe APIs.

Full Stack Developer (Front End Focus) | American Express | September 20 2021 – September 21 2022

- Developed and maintained frontend applications within American Express payment interfaces using React.js, HTML5, CSS3, and JavaScript.
- Designed and implemented lightweight backend RESTful Microservices and GraphQL APIs utilizing Node.js and Apollo to increase efficiency of payment processing by 53% using AWS Lambda.

- Architected and implemented scalable and reusable frontend components and component libraries to improve development efficiency by 70%.

Senior Full Stack Software Engineer | SiriusXM | March 7 2020 – September 10 2021

- Designed and developed front-end user interface using Javascript and React.js for music streaming application.
- Architected and developed Node.js backend microservices with Express.js framework which were used by thousands of users using AWS ELB, Route 53 and ECS.
- Implemented coding standards to increase accessibility, developer workflow and work productivity.
- Optimized application performance through code optimizations and minimizing network requests.
- Streamlined CI/CD code deployment process using Terraform & Python scripts to reduce time to production by 95%.

Software Engineer | Accenture | August 7 2018 – March 1 2020

- Designed and developed a shift scheduling and reward tracking application using React and JavaScript, resulting in \$2.5M in operational cost savings.
- Developed User interfaces using MongoDB, Express.js, Node.js, and React.js incorporating features used for video streaming and DVR Playback.
- Collaborated with the design team to ensure the application's visual design and branding aligned with company requirements and guidelines.
- Built an interactive chatbot interface and backend logic for real-time customer troubleshooting using React, TypeScript, Node.js, and WebSockets which led to an estimated \$875 million in annual cost savings by reducing truck roll dispatches through self-service support.
- Developed large scale microservices using Java/Spring which resulted in millions of dollars in costs savings.

Software Developer in Test | Cognizant Technology Solutions | August 1 2015 – August 7 2018

- Developed web application using Express.js and Node.js to create test data, automate test cases, track open defects, and display automated regression tests results using D3.js which reduced test cycle time by 90%.
- Conducted thorough testing and debugging to ensure high-quality and bug-free code.
- Experience in branching and maintaining versions across environments using Git on Linux Platforms.
