

Manoj Kumar Bandi

Data Analyst

Chicago, IL | manojbandi2306@gmail.com | (312) 970-9259 | [LinkedIn](#)

SUMMARY

- 4 years of proven expertise in **Data Analysis**, utilizing a diverse skill set encompassing **statistical techniques, machine learning algorithms**, and advanced **data visualization tools**.
- Led end-to-end **SDLC projects**, adeptly toggling between **Agile and Waterfall**, delivering **Python, SQL, and R** solutions for data analysis using **NumPy, Pandas, Matplotlib, Seaborn, SciPy, ggplot2, and Scikit-learn**.
- Excelled in data visualization with **Tableau, Power BI, and Advanced Excel**, integrating **AWS** services for scalable solutions across **MySQL, SQL Server, PostgreSQL, MongoDB, and Oracle** databases.
- Managed projects with **Jira, HP Quality Center, and UAT**, employing **ETL tools**, exploratory analysis, and statistical methods to extract actionable insights from diverse datasets.
- Applied **SSIS, and SSRS** for predictive modeling, **classification, regression, clustering, and A/B testing**, contributing to precise forecasting and modeling outcomes.
- Specialized in **data cleaning, wrangling, storytelling, and association rule analysis**, ensuring version control through **Git and GitHub** while excelling in **KPI tracking** and effective communication.
- Demonstrated adaptability in **Windows, Linux, and Mac iOS** environments, showcasing a comprehensive skill set in **data analytics, statistics, data warehousing, and big data** technologies.
- Worked closely with cross-functional teams, including **Finance, Healthcare, and IT**, to gather requirements and align data analytics with business goals, showcasing strong communication and problem-solving skills.

SKILLS

Methodologies:	SDLC, Agile, Waterfall
Language:	Python, SQL, R
Packages:	NumPy, Pandas, Matplotlib, Seaborn, SciPy, ggplot2, Scikit-learn
Visualization tools:	Tableau, Power BI, Advanced Excel (Pivot Tables, VLOOKUP)
Cloud Technology:	Amazon Web Services, Microsoft Azure, Google Cloud Platform
Database:	MySQL, SQL Server, PostgreSQL, MongoDB, Oracle
Tracking Tools:	Jira, Microsoft Visio, HP Quality Center, JAD, Rational ClearQuest, RTM, UAT
Other Skills:	ETL Tools, Exploratory Analysis, Hypothesis Testing, Statistical analysis, Machine Learning Algorithms, SSIS, SSRS, Probability distributions, Advance Analytics, Data Mining, Data Visualization, Data warehousing, Data transformation, Data Storytelling, Association rules, Clustering, Classification, Regression, A/B Testing, Forecasting & Modelling, Data Cleaning, Data Wrangling, Big Data, Statistics, Data Cleaning, Data Wrangling, Git, GitHub, KPI Tracking, Critical Thinking, Communication Skills, Presentation Skills, Problem-Solving, Decision-Making
Operating System:	Windows, Linux, Mac iOS

EXPERIENCE

Data Analyst | Optum, IL

May 2023 – Present

- Developed a predictive analytics solution to identify patients at high risk of readmission, enabling proactive interventions and personalized care plans to reduce hospital readmissions.
- Used Python's Pandas library for data preprocessing tasks such as cleaning, transforming, and aggregating patient data, ensuring data quality and consistency for analysis and modeling.
- Optimized SQL queries for performance and efficiency, ensuring timely retrieval and processing of large volumes of patient data to support real-time decision-making.
- Conducted ad hoc analysis in Tableau to explore relationships between readmission risk factors, such as medical conditions, treatments, and patient demographics, enabling deeper insights into readmission patterns and contributing factors.

- Leveraged Apache Spark's distributed computing architecture to scale out processing capacity horizontally across a cluster of nodes, ensuring efficient processing of large-scale patient datasets.
- Made security measures to handle sensitive patient data, ensuring compliance with healthcare privacy regulations such as HIPAA.
- Utilized Amazon Comprehend Medical to extract structured information from unstructured medical text data, such as clinical notes or medical reports.
- Measured the percentage of patients who are readmitted to the hospital within a specified period after discharge, indicating the effectiveness of interventions in reducing readmissions.

Graduate Analyst| University of Illinois, Chicago

Dec 2022 – April 2023

- Conducted sentiment analysis on open-ended responses from administered surveys, generating valuable insights that contributed to a 10% increase in user-reported satisfaction with library resources.
- Built operational dashboards for UIC Library leveraging Inter-library Loan (ILLiad) network data extracted through SQL, significantly reducing book delivery delays across the ILLiad Network libraries by 20%.
- Developed operational dashboards using Python & Tableau by collaborating with cross-functional teams to obtain inventory data, providing granular insights into subject and domain-specific stock levels. Resulted in a 15% reduction in inventory stockouts and improved operational efficiency through informed decision-making on material maintenance and procurement.
- Facilitated training and onboarding sessions for new recruits, equipping them with essential skills, including Python and SQL programming. This seamless integration fostered cross-functional collaboration, innovation, and disruptive solutions.

Data Analyst| HCL Tech, India

Feb 2020 – Aug 2022

- Used Python to conduct thorough data analysis, ensuring comprehensive insights into various business aspects such as sales, marketing, and customer interactions.
- Conducted sentiment analysis on customer feedback data to gauge satisfaction levels and pinpoint areas for improvement, leading to a notable 20% enhancement in overall customer satisfaction scores.
- Implemented event-driven architecture using Kafka to process and handle events such as sales orders, customer inquiries, and marketing campaign responses in real-time, facilitating timely decision-making.
- Leveraged pricing data analysis to optimize pricing strategies, driving a commendable 5% improvement in profit margins through strategic pricing adjustments.
- Utilized Power BI's data modeling capabilities to create relationships between different datasets, perform data transformations, and define calculated measures, facilitating accurate and insightful analysis.
- Used Amazon Kinesis for real-time data streaming, allowing the processing of large volumes of data from various sources such as sales orders, customer inquiries, and marketing campaign responses.
- Implemented dimensional modeling techniques such as star schema within the data warehousing solution to efficiently organize and structure data for analysis which facilitates the creation of relationships between different datasets and ensures accurate and insightful analysis.
- Used Excel files as a convenient storage and archival solution for historical data and analysis results and also used workbooks for organized and categorized purpose to maintain record of past analyses and insights for future reference.
- Evaluated customer loyalty and likelihood to recommend the company to others based on a survey question, indicating overall customer satisfaction and brand advocacy.
- Addressed ethical considerations related to the A/B testing, ensuring that any potential impact on stakeholders or operational processes was carefully evaluated and mitigated.

EDUCATION

Master of Science in Business Analytics – University of Illinois, Chicago

Bachelor of Technology in Mechanical Engineering – Lovely Professional University, Punjab, India
