

MANOJ REDDY

QA AUTOMATION ENGINEER

+1 8133609597 manojreddy9806@gmail.com LinkedIn: <https://www.linkedin.com/in/manojreddy9806/>

PROFILE SUMMARY

- **5+ years** of experience in **QA Automation** and **Manual Testing** across **banking, healthcare, pharmaceutical, and retail** domains.
- Focused on delivering **reliable, high-performance, and user-centric** applications through rigorous **manual and automated testing**, ensuring superior **usability, stability, and functional integrity** across all components.
- Expertise in designing and maintaining **test automation frameworks** using **Selenium, Cypress, Playwright, and Appium**, validating complex **web, mobile, and API** workflows for business-critical systems.
- Skilled in writing and executing **manual test cases** aligned with **business requirements** and **acceptance criteria**, enabling effective validation of both **front-end** and **back-end** features.
- Proficient in **API testing and automation** using **Postman, REST Assured, and SoapUI**, with hands-on experience in validating **FHIR, HL7, and X12 EDI (837/835)** standards in **healthcare** data exchange.
- Strong knowledge of **SQL**, capable of crafting and executing complex queries for backend validation and **data-driven feature** testing.
- Experienced in integrating **automated regression tests** into **CI/CD pipelines** using **Jenkins, Azure DevOps, and GitLab**, supporting smooth and reliable deployments.
- Demonstrated ability to **analyze requirements**, collaborate with cross-functional teams, and contribute a **test-first perspective** throughout the **Agile/Scrum** development lifecycle.
- Proven experience with **defect lifecycle management, smoke/regression testing** during **off-hours deployments**, and driving **continuous QA process improvement** across distributed teams.
- Bachelor's degree in electrical engineering with a solid foundation in Computer Science principles, Software Engineering, and programming concepts.

TECHNICAL SKILLS

- **Automation Tools:** Selenium WebDriver, Cypress, Playwright, Appium, TestComplete
- **Programming & Scripting:** Java, Python, JavaScript, SQL
- **Test Frameworks & Practices:** TestNG, JUnit, Cucumber, Gherkin, Page Object Model (POM), TDD, BDD
- **API & Backend Testing:** Postman, REST Assured, SoapUI, SQL, OAuth2, OWASP ZAP
- **Performance Testing:** JMeter, LoadRunner
- **Database Technologies:** SQL Server, Oracle, NoSQL
- **Version Control & CI/CD:** GitHub, GitLab, Bitbucket, Jenkins, Azure DevOps, Maven
- **Test & Defect Management:** JIRA, Confluence, Bugzilla, Azure DevOps Boards
- **Cloud, Containerization & Cross-Platform Testing:** Docker, Kubernetes, BrowserStack
- **Healthcare & Regulatory Standards:** FHIR, HL7, X12 EDI (837/835), HIPAA, GDPR, GxP
- **Agile Methodologies:** Agile, Scrum, Sprint Planning, Retrospectives

EDUCATION

- **Indiana Wesleyan University, USA**
Masters \ Information Technology and Management - (Jan 2023 – Aug 2024)

CERTIFICATION

- Certified Professional Selenium Tester (CPST)

PROFESSIONAL EXPERIENCE

Client: Cigna Healthcare, Florida , USA

March 2024 - Present

Role: QA Automation Engineer

Responsibilities:

- Developed and maintained automated tests using **Selenium, Cypress, Appium, and Playwright** to validate key **healthcare workflows** such as **member login, benefit lookup, and telehealth scheduling** across **web and mobile platforms**.
- Designed modular **test automation frameworks** to validate **EHR integrations and patient data workflows**, including **lab results retrieval, care summaries, and appointment history**.
- Performed **API testing** for **FHIR and HL7** services using **Postman, REST Assured, and SoapUI**, validating **patient demographics, medication lists, and prior authorizations**, including headers and authentication.
- Integrated automated test scripts into **Jenkins and Azure DevOps** pipelines, enabling nightly **regression runs** for critical modules like **claims and eligibility**.
- Wrote and executed complex **SQL queries** in **SQL Server and Oracle** to validate updates to **patient data, policy status, and provider assignments** across backend systems.
- Conducted **end-to-end testing** for **claims workflows**, covering **X12 EDI 837** submissions, **adjudication logic**, status updates, and **EOB generation**.
- Verified **HIPAA compliance** by validating **encryption, token expiration, and PHI masking** in sensitive workflows, including **third-party API integrations**.
- Executed **cross-browser and cross-platform testing** using **Playwright and BrowserStack**, ensuring consistent UX across **desktop, tablet, and mobile** devices used by members and clinicians.
- Applied **TDD and BDD** practices using **TestNG, JUnit, and Cucumber** to deliver early test coverage for **healthcare modules** like **eligibility checks, claims adjudication, and prior authorizations**.
- Executed detailed **manual testing** of both **front-end and back-end** components to validate feature behavior against **acceptance criteria** and ensure high product quality.
- Supported **off-hours deployments** by running **smoke tests** and validating **production stability**, collaborating with developers during post-deploy checks.

ENVIRONMENT: Selenium, Cypress, Appium, Playwright, Postman, REST Assured, SoapUI, SQL Server, Oracle, Jenkins, Azure DevOps, BrowserStack, TestNG, JUnit, Cucumber, JIRA, Confluence, FHIR, HL7, X12 EDI (837/835), HIPAA, OAuth2, Agile, BDD, TDD, Manual Testing.

Client: Capital One, Orlando, Florida, USA

February 2023 – January 2024

Role: QA Automation Engineer

Responsibilities:

- Automated key banking operations such as **credit card processing, loan application flows, and online bill payments** using **Selenium WebDriver and Java**, ensuring coverage of regulatory and customer-facing scenarios.
- Built a **Page Object Model (POM)**-based test framework with **Maven**, streamlining test maintenance for frequently changing modules and enabling rapid updates with minimal code impact.
- Developed **UI test scripts** using **Cypress and Playwright** for customer journeys like **fund transfers, KYC verification, and user authentication**, incorporating **API mocking and network intercepts** to simulate backend behavior.
- Conducted **API-level validations** for banking services including **balance inquiry, account updates, and transaction history** using **Postman and REST Assured**, verifying payloads, response codes, and access tokens.
- Executed **mobile app testing** on both Android and iOS simulators via **Appium**, validating flows such as **push notifications, biometric login, and in-app bill payments** across device versions.
- Led **cross-browser testing** on Capital One's Angular-based UI using **Protractor**, uncovering layout inconsistencies and usability issues in **Chrome, Firefox, and Edge**.
- Simulated **high-volume transaction loads** for peak hours using **LoadRunner**, working with performance teams to analyze system throughput, latency, and bottlenecks in fraud detection APIs.
- Collaborated closely with product owners and developers to refine test coverage during **sprint planning**, and shared exploratory test findings during **retrospectives**.
- Documented test logic and framework architecture in **Confluence**, while tracking user stories, defects, and task progress through **JIRA** boards.

ENVIRONMENT: Java, JavaScript, Python, Selenium WebDriver, Cypress, Playwright, Postman, REST Assured, Appium, Protractor, LoadRunner, Oracle, Maven, POM, JIRA, Confluence, Agile, Scrum.

Client: Colruyt Group, Hyderabad, India

September 2021 – July 2022

Role: QA Analyst

Responsibilities:

- Developed **automated regression suites** using **Selenium WebDriver**, **Cypress**, and **Appium** to cover critical retail workflows like **cart functionality**, **promo applications**, and **checkout validations** across web and mobile platforms.
- Designed lightweight **automation frameworks** tailored for rapid test execution during nightly builds, enabling efficient catch of UI defects in **high-traffic retail modules**.
- Created and maintained **REST API test cases** for backend systems like **inventory sync**, **order tracking**, and **customer authentication** using **Postman**, **REST Assured**, and **SoapUI**.
- Validated data accuracy by writing **SQL queries** for cross-verification of **user accounts**, **order history**, and **pricing rules** between UI and backend systems.
- Adopted **BDD practices** using **Cucumber** and structured feature files to align test coverage with evolving business logic during Agile sprints.
- Deployed automation jobs using **Docker** and scheduled multi-platform executions via **Kubernetes**, allowing parallel execution across browser types and OS variations.
- Actively participated in **Agile ceremonies**, providing test coverage updates, reviewing acceptance criteria, and contributing to story grooming sessions.
- Logged, tracked, and verified issues in **JIRA** and **Azure DevOps**, maintaining traceability from test case to defect resolution.

ENVIRONMENT: Selenium WebDriver, Cypress, Appium, Java, JavaScript, Postman, REST Assured, SoapUI, SQL, GitHub, GitLab, Bitbucket, Docker, Kubernetes, JIRA, Bugzilla, Azure DevOps, Cucumber, BDD, Agile.

Client: Sandoz India Pvt Ltd, Hyderabad, India

July 2019 – August 2021

Role: Software Test Engineer

Responsibilities:

- Designed and executed **manual and automated test plans** for pharmaceutical platforms such as **drug inventory systems** and **patient portals**, ensuring adherence to **GxP** and **healthcare regulatory standards**.
- Automated key **integration and regression tests** for clinical trial systems using **Selenium** and **TestComplete**, improving release efficiency and reducing QA cycle times.
- Integrated automated test suites into **CI/CD workflows**, enabling continuous quality checks for modules like **prescription tracking** and **medication refill history**.
- Collaborated with performance teams to run **load and scalability tests** using **JMeter** and **LoadRunner**, analyzing backend responsiveness under simulated peak usage conditions.
- Conducted detailed **SQL-based validations** across **Oracle** and **NoSQL databases** to ensure data integrity within **LIMS** and **ERP** workflows.
- Tested **API integrations** for lab systems and inventory services using **Postman**, while applying **OWASP ZAP** for **security testing** of exposed endpoints.
- Reported and tracked issues via **JIRA**, ensuring timely resolution and risk-based prioritization aligned with sprint commitments.

ENVIRONMENT: Selenium, TestComplete, QTP, Postman, OWASP ZAP, JMeter, LoadRunner, SQL, Oracle, NoSQL, CI/CD, LIMS, ERP, HIPAA, GDPR, JIRA, GxP, Manual Testing.
