- **Frameworks/Libraries:** React, Vue.js, Node.js, Flask
- **Databases:** SQLite3, MySQL, PostgreSQL
- **Tools:** Git, GitHub, Expo, Microsoft Office Suite
- **OS:** Linux, MacOS, Windows
- **Soft Skills:** Leadership, Communication, Teamwork, Time Management, Problem Solving, Adaptable

PROFESSIONAL INVOLVEMENT

RxMobile App

ECS (Engineering and Computer Science) Expo Finalist

August 2024 – May 2025

RxMobile is a mobile app designed to help medical patients or anyone taking medication, keep track of their medications. This app is an easy-to-use tool to help patients and caretakers manage a prescription regimen by notifying the user when to take pills, what dosage, and when to order a refill when running low. The app uses the users' phone camera to scan their prescription receipts, adds them to their local database, and provides the information in a collapsible list for easy viewing. The app also includes a log of all taken or missed dosages and previously used medications as an organized prescription journal.

- Conceived the initial idea for the project and incorporated all additional suggestions for functionality
- Oversaw the progress of the project and communicated with members through github push commits
- Organized meeting and gave feedback on improvement of functional requirements
- Written using Expo Node JS & React with Python3 for our API server
- Connected with various students and professionals within the ECS community for future queries

CSUF Department Dashboard Webapp

Open-Source Computing Class Project

August 2024 – December 2024

This webapp was created for managing the Cal State Fullerton's physics department assets, employees and courses. As an employee for the physics department, our partner was tasked with physically visiting each room in the department and keep inventory of what hardware was in each room, what needed replacing, what classroom the assets belong to, and which professors use the room. Before we created our webapp, everything was hand-written, and our teammate wanted to be able to do his job on his phone or tablet for a fast and easy work environment.

- Work was split evenly between the three group members
- Responsible for creating the assets table, JS file and views for the project
- Built using Vue for the frontend framework and Node JS with PostgreSQL for the backend

FitFix Webapp

Software Engineering Class Project

March 2024 – May 2024

FitFix is a new type of all-inclusive fitness application that monitors your overall physical fitness. This web application calculates your body mass index (BMI), generates workouts curtailed to the users liking, and creates a healthy diet plan for them. The app helps achieve our goal of encouraging users to live an active and healthy lifestyle.

- A group collaboration that took everyone's common interest and birthed a webapp that each could benefit from
- Advocated for adding additional layers to the dietary restrictions for further inclusion of all walks of life
- Responsible for creating majority of the tables used in the project
- Create using Python, JavaScript, Flask, SQLite3, HTML and CSS
