Backend / Software Developer

Python & C++ developer with experience in automation, API integration, and database-driven applications. Delivered solutions that improved efficiency by 90%, contributed to AI modeling projects, and built CLI tools for finance and class management. Skilled in Linux, Bash, ETL, and Flask-based backend systems.

EDUCATION

Universidade Estadual de Maringá
Bachelor of Science in Computer Science

Aug 2020 – Apr 2024
Maringá - PR, Brazil

EXPERIENCE

Python Consultant
Self-Employed

Oct 2022 – Jan 2025
Remote

- Designed and implemented automation pipelines and ETL workflows for clients, cutting task times by over 90%.
- Developed and integrated APIs for data exchange and automation solutions.
- Provided Python training on API usage, scripting, and data manipulation.

Web Developer
Maringá Post

Sep 2022 – June 2024
Remote

- Maintained backend functionality of a news platform with 5–7 million annual page views.
- Troubleshoot technical issues, optimized performance, and improved system reliability.
- Supported advertising campaign management with reporting and analytics tools.
- Wrote backend-supportive HTML/JS scripts to enhance site performance.

Programmer
Science Solutions

Aug 2020 – Sep 2021
Maringá - PR, Brazil

- Built software, firmware, and web applications with Python, C++, Flask, and MariaDB.
- Contributed to an AI-powered weather prediction model and a wildfire detection system for Mato Grosso.
- Developed Arduino-based firmware in C++ for hardware control.
- Collaborated on debugging, testing, and hardware troubleshooting.

PROJECTS

Personal Finance CLI Tool | *Python, File-Based Storage*

- CLI application for budgeting and annual expense forecasting.
- Distributes funds proportionally across user-defined categories; supports overrides.
- Tracks recurring expenses and shows available funds after forecasted spending.
- File-based persistence maintains continuity across sessions.

Class Management CLI Tool | *Python, File-Based Storage*

- Tracks student hours, payments, and overdue balances.
- Calculates amounts owed based on fixed hourly rates and session hours.
- Supports weekly or monthly payment schedules with overdue alerts.
- File-based storage maintains persistent records.

TECHNICAL SKILLS

Programming & Backend: Python, C, C++, Assembly, Flask, SQL/MariaDB, ETL pipelines, API development & integration, HTML & JavaScript (supportive)

Data & AI: TensorFlow, automation scripting, database design & management

Systems & Tools: Git, GitHub, Bash scripting, Linux (Arch), Arduino (C++)
