EXPERIENCE

Genentech July 2024 - July 2025

- **Analytical Data Scientist**

- Led a data science team, with a total of 5 programmers, working closely with Clinical Science, Clinical Operations, Data Management and Regulatory teams to manage activities for the molecule.
- Supported 3 additional studies, managing the end-to-end clinical data pipeline and generated outputs for reporting events according to CDISC/SDTM/ADAM guidelines, consistently meeting deadlines for data monitoring committees, and interim analyses.
- Developed a modular R-Shiny app with features like a manual MAYO scores calculation tool and data entry error checks, enhancing support for the clinical, biostatistics, and clinops teams.
- Led the team's study migration from legacy (entimICE/SAS based setup) to modern platforms/systems (R-based setup)
- Community Activities: Active member in the planning communities, leading discussions on AI implementation and current data workflow as well as organizing events for the Genentech data science community.

Genentech July 2023 - July 2024

- **Data Science Intern**

- Developed the R function used within the internal 'roak' package to generate relational record datasets
- Wrote and updated algorithm derivations and communicated data issues with data quality team

Cheesecake Factory July 2017 - Dec 2022

- **Bartender/Server**

- Ensured quality service and crafted beverages while maintaining corporate standards in a busy restaurant environment, contributing to the restaurant's \$26 million annual revenue

SKILLS

Programming: R(tidyr, dplyr, ggplot2 etc...), SAS(Stat, Macro, SQL), SQL, version control (Gitlab), Python(pandas, numpy, matplotlib, scikit-learn)

Statistical Methods: Statistical analysis methodology, regression, hypothesis A/B testing. Supervised and unsupervised machine learning, deep learning, optimization theory and algorithms.

Languages: English (native), Russian (native)

Soft Skills: Strong communication and interpersonal skills, ability to work collaboratively in fast-paced team environments, adaptability under pressure, conflict resolution, time management, customer service excellence, multitasking, problem-solving

EDUCATION

University of California, Davis, Davis, CA, United States

M. S. Statistics: Data Science Track

B. A. Mathematics

Graduated: **June 2024**

Graduated: **June 2022**

PROJECTS

Predictive analytics Project: Major Crimes in Toronto. Analyzed crime patterns in Toronto using supervised and unsupervised machine learning and interactive visualizations. Methods included random forest, gradient boosted trees (xgboost) + employing class weighing + oversampling

Malware Detection Project: Detected Android malware using machine learning classification algorithms such as logistic regression Feedforward Neural Network and Random Forest

Tesla Stock Volume Analysis: Web scraped Guardian news articles and Tesla Earnings reports using API keys and html parsing to visualize trading volume patterns and found trends in trading volume based on headlines and earnings reports.

RELEVANT COURSEWORK

Optimization for Big Data Analytics, Computational Statistics, Data & Web Technologies for Data Analysis, Big Data + High Performance Statistical Computing, Statistical Methods in Machine learning, Statistical Methods for Research, Multivariate Data Analysis, Fundamentals of Statistical Data Science, Mathematical Statistics, Linear Algebra, Differential Equations, Abstract Math, Real Analysis, Numerical Analysis, Probability, Stochastic Processes, Regression Analysis, Analysis of Variance, Mathematical Finance, Game Theory, Engineering Problem Solving, Decision Making
