

Mary Siri Chandana Gade

+1 (309) 445-7747 | marychandana24@gmail.com | [LinkedIn](#)

"Experienced GoLang and Java Engineer with 4+ years' experience and a strong background in developing high-performance, scalable applications using Go. Proficient in concurrent programming, microservices architecture, and performance optimization.

Skilled in leveraging Cassandra for distributed database solutions, ensuring scalability and fault tolerance. Experienced in using Docker for containerization and Jenkins CI/CD to automate build, test, and deployment pipelines. Adept at ensuring code works well in E1 environments and is capable of handling production E3 issues effectively. Strong understanding of Agile methodologies, with hands-on experience using tools like Rally for project management. Proficient in version control using Git, data visualization with Kibana, and working within Mac OS environments."

EDUCATION

Illinois State University, Bloomington

January 2022 – August 2023

Master's in computer science, GPA: 3.45/4.0

Bloomington, IL.

Vaagdevi College of Engineering

June 2015 – May 2019

Bachelor's in computer science GPA: 9.4/10.0

Warangal, India

SKILLS

- **Skills:** Go Lang, Java, Concurrent Programming, Microservice Architecture, Performance Optimization, Distributed Databases, containerization, CI/CD pipelines, Agile Methodologies, Production Environment Handling, and version control.
- **Tools:** GoLand IDE, IntelliJ Cassandra, Jenkins, Rally, Git, Kibana, Windows OS, Mac OS, Grafana, Prometheus, Postman, Docker, Kubernetes, Redis, Consul, Apache Kafka
- **Additional Technologies:** GCP, AWS, Service Mesh

WORK EXPERIENCE

Data Solutions, Inc

Software Engineer

12/2023–Present

Client -American Express -Contract

Phoenix, AZ

- Involved in developing and maintaining systems for capturing payments on behalf of merchants.
- Significantly improved transaction processing performance for a client by a factor of 6x through the reduction of API calls and implementation of response caching.
- Designing scalable, high-performance applications to facilitate seamless payment processing.
- Actively collaborating with cross-functional teams to ensure reliability and efficiency of payment solutions.
- Actively monitoring the performance of payment systems and implementing optimizations to improve efficiency and reduce downtime.
- Responding to and resolving production issues, ensuring minimal disruption to payment processing operations.
- Leveraging Go's concurrency model to handle multiple payment requests simultaneously, enhancing system performance and reliability.
- Implemented an integration testing framework utilizing Docker and Docker Compose, enabling efficient testing of changes across multiple services
- Employing profiling and benchmarking tools to identify bottlenecks and improve the overall performance of payment applications.
- Utilizing Git for version control and implementing CI/CD pipelines with Jenkins to automate testing and deployment processes.
- Implementing best practices for data security and compliance with industry standards (e.g., PCI DSS) to protect sensitive payment information.

Illinois State University, IL, USA
Software Developer

January 2022 – August 2023

- **Description:**

- The "Illinois State University Transportation" project aims to enhance organizational efficiency by offering a range of online cab services for both customers and cab owners to update ride availability. Developed using Java for the front end, the project incorporates multiple modules catering to different user types.

Responsibilities:

- Implemented business logic utilizing design patterns like MVC and Data Access Objects.
- Utilized Angular to build interactive features, enhance project functionality and user satisfaction.
- Resolved application bugs as a valuable member of the maintenance team.
- Developed the front-end, crafting home and index pages through JSP, HTML, and JavaScript.
- Implemented unit tests using the JUnit framework to ensure robust code quality.
- Utilized Visual Paradigm to create Sequence Diagrams, Class Diagrams, and Architectural Diagrams.
- Deployed and maintained the portal using the Apache Tomcat Server.
- Regularly presented software product demos to business users at the conclusion of each Sprint.

Software Engineer

05/2019–12/2021

Tata Consultancy Services-Full Time

Nagpur, India

- Proficient in developing services and applications using Go, focusing on efficiency and scalability.
- Knowledge of Go's concurrency features (goroutines, channels) to optimize performance and manage high transaction loads.
- Experience in building and deploying Golang-based services, such as TPIN (Transaction Personal Identification Number) validation systems.
- Understanding of design systems that can handle high transaction volumes (e.g., 10,000 TPS).
- Ability to troubleshoot and resolve server and database performance issues, collaborating with optimization teams to identify and eliminate bottlenecks.
