SUMMARY

Software Engineer with 2 years of data engineering experience at Wells Fargo and currently building web applications at University of Cincinnati. Skilled in Python, React, Node.js, SQL, and cloud platforms, with hands-on experience in building data pipelines, machine learning scripts, and AI-powered chatbot solutions.

EDUCATION

University of Cincinnati

Aug 2024 – Dec 2025

Master of Science in Information Technology – GPA: 3.87/4

C.M.R College of Engineering and Technology (J.N.T.U)

Jul 2018 – Jun 2022

Bachelors in Electronics and Communication Engineering – GPA: 3.68/4

SKILLS

- Programming Languages: Python ([Certification Link](#)), SQL, Java, JavaScript, C++, C# ([Certification Link](#))
- Back-End: Botpress, J2EE (Jakarta EE), Express.js, Node.js
- Front-End: HTML, Tailwind CSS, jQuery, React, Streamlit
- A.I: Introduction to Agentic A.I ([Certification Link](#)), llama 3.2, Open AI Swarm.
- Databases: Microsoft SQL Server, PostgreSQL, Oracle DB, MySQL, MongoDB
- Data Engineering: Warehousing with databricks ([Badge Link](#)), IBM DataStage, PySpark, Fact/Dimensional Modelling, Azure Synapse Analytics
- Cloud Platforms: Azure ([Certification Link](#)), AWS SageMaker ([Badge Link](#)), Databricks ([Badge Link](#))
- Tools: Git, Apache Tomcat Server, Docker, VMware
- Automation: Power Automate, Autosys, Google Apps Script

WORK EXPERIENCE

Software Engineer (Full Stack Developer)

Oct 2025 – Present

Information Technology Analytics Center – University of Cincinnati

- Building a full-stack website with integrated **chatbot services using the Botpress framework** to help clients make service requests and submit digital paperwork, consolidating several manual email/paper flows into a single system and reducing duplicate data entry
- Implemented a responsive **User Interface using React and Tailwind CSS**, testing across device types (phones, tablets, laptops, desktops) and 10+ representative layouts to ensure consistent rendering and accessibility.
- Front-end interface was designed using React.js, HTML, and Tailwind CSS and **back-end services with Node.js and Express** integrated with a **PostgreSQL database**, supporting secure storage and retrieval for 1000+ records as usage grows
- Architecting **chatbot with AWS Bedrock LLM integration** and iterative prompt tuning, to provide more personalized and context-aware support, reducing fallback/escalation cases in sampled conversations from roughly 35–40% to about 15–20%.

- Designed and maintained 10+ **ETL pipelines ingesting supply-chain data** via APIs, NDM's, flat files, and database transfers from 3+ major vendor systems (Concur, Ariba, PeopleSoft), improving flexibility in onboarding new vendors.
- Implemented data warehouse solutions using **Kimball star schemas and SCD Type 2 dimensions** to support multi-year historical tracking of procurement and expense data for finance stakeholders.
- Built **SQL Server scripts** (joins, views, stored procedures) **orchestrated with Autosys and PowerShell** to process 10M+ records per load, ensuring timely and reliable availability of curated data to downstream systems.
- Implemented **parallelization in SQL Server-based ETL jobs** by splitting large loads into multiple concurrent batches, improving data load throughput on high-volume pipelines by roughly 20–30% and reducing end-to-end batch times
- Translated and **transformed legacy ETL (IBM DataStage) code** and replicated its functionality in Microsoft SQL Server-based ETL pipelines, reducing dependence on aging tooling while preserving existing business logic.
- Supported IBM DataStage during the sunset phase by maintaining multiple financial reporting pipelines and ensuring successful execution of daily and monthly loads
- **Migrated 50+ Oracle database objects** (tables, indexes, partitions) to SQL Server, improving query performance by roughly 15% and enhancing reliability for financial reporting workloads.
- Prepared **structured, clean datasets for Power BI dashboards and KPI monitoring**, providing error-free reports and improving the freshness of procurement and expense data used by stakeholders

PROJECTS

Data Modelling ([Repo Link](#))

Jul 2025 - Aug 2025

- Designed **fact and dimensional schemas and ETL transformations** to prepare analytics-ready datasets for 10,000+ NBA player and game records.
- Implemented **graph data modeling in SQL** to represent relationships between players, teams, and seasons, enabling more complex analytical querying patterns.
- Maintained a **public repository documenting data engineering bootcamp learnings**, demonstrating reproducible workflows and SQL best practices

Agentic News Assistant ([Repo Link](#))

Jan 2025 - Present

- Designed an **Agentic news assistant with three agents** dedicated to collecting news from the web using a DuckDuckGo-based module, synthesizing content, and presenting the results to the user
- The project was implemented **using Python, OpenAI Swarm, Llama 3.2 on the backend, and Streamlit for an interactive user interface** that takes a user defined news topic as input and produces synthesized latest news on the topic.
