EDUCATION

CALIFORNIA STATE UNIVERSITY NORTHRIDGE

May 2024

Bachelor of Economics

Los Angeles, CA

Relevant Coursework: Principle of Microeconomics & Macroeconomics, Intro to Financial & Managerial Accounting, Statistics, The Use of Economic Data, Intro to Econometrics, Business Communication

WORK EXPERIENCE

THE LILLIAN MOBLEY CENTER

May 2023-July 2023

Data Analyst Intern

- Identified and evaluated potential areas for community program development by conducting economic research on key indicators (employment rates, housing prices) to assess income inequality and housing affordability across L.A. County.
- Extracted and analyzed large datasets using SQL to determine the percentage of rent-burdened households and combined demographic and housing data to identify economically disadvantaged communities.
- Leveraged Python (Pandas, NumPy, Matplotlib) for in-depth analysis of affordability trends and housing burden patterns to identify key trends and correlations impacting affordability, visualizing these insights using Matplotlib.
- Developed interactive Power BI dashboards and Excel visualizations to highlight target neighborhoods with high rent burden and unemployment, supporting data-informed outreach and planning.

PROJECTS

TRAFFIC ACCIDENT SEVERITY ANALYSIS

Spring 2025

- Analyzed 200,000+ traffic accident records using statistical methods to identify correlations between crash types and injury severity, providing quantitative evidence that rear-end collisions presented the highest injury risk.
- Cleaned and preprocessed large datasets using Python (Pandas, NumPy), ensuring data integrity and creating compelling statistical visualizations via Seaborn and Matplotlib for research presentation.
- Built custom crash severity index methodology and employed statsmodels for regression analysis to examine fatality trends by crash type, delivering rigorous quantitative analysis with actionable insights.
- Developed advanced DAX measures in Power BI to calculate injury and fatality percentages by crash type, creating a comprehensive analytical framework for accident severity assessment.

A STATISTICAL DEEP DIVE INTO IMDb RATINGS

Fall 2023

- Built multivariate linear regression models to evaluate how film budgets, box office returns, and genres influenced IMDb ratings, uncovering a negative correlation between budgets and ratings and identifying genre as the strongest predictor of film popularity.
- Validated model accuracy by testing OLS assumptions, conducting White's Test for heteroskedasticity and analyzing Variance Inflation Factors (VIF) to assess correlation.

SKILLS

Technical Skills: Python, SQL, PowerBI, Excel (Advanced: VBA Macros, Pivot Tables, Power Query), Gretl, Data Analysis, Data Cleaning, Data Visualization & Reporting, Statistical Analysis, PowerPoint

Soft Skills: Analytical Thinking, Communication, Problem-Solving, Attention to Detail, Collaboration, Time Management, Critical Thinking, Decision Making, Adaptability
