EDUCATION

University at Albany, SUNY

Aug 2023 – May 2025

Master of Science in Data Science

Albany, NY

Coursework: Database Systems, Data Mining, Machine Learning, Data Mining, Data Visualization, Web Mining, Cloud Computing

SKILLS

Programming: Python, R, SQL

Data Analysis & Visualization: Excel (PivotTables, Power Query, XLOOKUP), Tableau, Power BI, Matplotlib, Seaborn, ggplot2, Streamlit

Databases & Platforms: Oracle, SQL Server, Snowflake, Databricks, dbt, Hugging Face

Machine Learning & AI: Scikit-learn, TensorFlow, PyTorch, Transformers, LangChain, Gradio, FAISS, PEFT, LoRA, RAG Pipelines, K-Means Clustering, Time Series Forecasting (ARIMA, Prophet), Regression Models, Decision Trees, Churn Prediction

Statistics & Modeling: Hypothesis Testing (Mann-Whitney U Test, t-test, Power Analysis), Probability & Statistical Inference, Data Modeling, ETL Workflows

Workflow & Tools: Git, Bitbucket, Jira, PyPDF

EXPERIENCE

Data Analyst Intern

Jan 2025 – Present

N.C. Schultz LLC

Albany, NY

- Increased reporting accuracy and reduced manual effort by **40%** by automating daily sales operations using **SQL pipelines**.
- Improved decision-making for store managers by deploying **weather-adjusted models** through a **Streamlit-based interface**.
- Improved campaign targeting and minimized stockouts by **20%** by applying **K-Means clustering** for customer segmentation and developing interactive **Power BI dashboards**.
- Integrated sales and inventory data from multiple systems using **SQL** and **Excel**, ensuring consistency and accuracy of reporting.
- Ensured **data integrity and normalization** by implementing validation checks and reconciliation across disparate systems.
- Updated dashboards and **trained end-users** on reporting tools, improving adoption of analytics for decision-making.

Machine Learning Intern

Feb 2023 – Mar 2023

Take It Smart

Bengaluru, India

- Enhanced dataset reliability by **30%** through cleaning, outlier handling, and applying normalization/scaling, optimizing features for downstream models.
- Boosted model performance by **20%** by implementing ML algorithms with **Python** (Scikit-learn, TensorFlow, PyTorch) and conducting hyperparameter tuning.
- Improved evaluation accuracy and collaboration by applying metrics (accuracy, precision, recall, F1), documenting workflows, and addressing fairness to reduce bias in models.
- Performed **data profiling and cleansing** to identify missing values and anomalies, ensuring high-quality datasets for modeling.

PROJECTS

Customer Lifetime Value (LTV) & Churn Prediction | Python, SQL, Scikit-learn, Tableau

Aug 2025

- Developed **LTV prediction model** using regression and survival analysis on customer transaction data, enabling Finance team to forecast long-term revenue impact.
- Implemented **churn prediction** with classification models (Logistic Regression, Decision Trees), improving retention targeting by **15%**.
- Operationalized outputs into **Tableau dashboards** integrated with SQL backend, guiding profitability analysis and revenue recognition processes.

Data Quality Monitoring & Reporting Automation | SQL, Power BI, Excel, dbt

Mar 2025

- Built automated **data quality checks** in **SQL/dbt** to identify anomalies and missing values across sales and customer data.
- Designed **Power BI dashboards** to monitor data integrity and normalization metrics, improving trust in reporting.
- Streamlined reporting by integrating **Excel Power Query** and SQL extracts, reducing manual errors by **30%**.

Sales Insights & Revenue Forecasting | SQL, Tableau, ETL, Data Modeling

Dec 2024

- Streamlined sales reporting and revenue forecasting by developing **SQL-based ETL workflows** and a star schema across disparate sources.
- Achieved **10% cost savings** with automated **Tableau dashboards** visualizing revenue breakdown, product trends, and regional profitability.
- Reduced manual reporting effort by **20%** through structured dashboards, delivering faster and more accurate insights.

Vendor Performance Analysis & Profitability Optimization | SQL, Excel, Statistical Testing, Power BI

May 2024

- Reduced unit costs by **72%** through analysis of bulk purchasing patterns in **SQL** and **Excel**, validating cost savings opportunities for high-volume orders.
- Detected over-reliance on top 10 vendors contributing **65.7%** of purchases and **\$2.71M** in unsold inventory, recommending diversification and clearance strategies to mitigate risk.
- Validated profit margin differences across vendors using **hypothesis testing**, providing Finance team with actionable pricing and profitability insights.
