

Recruiter Notes: 6+ years of experience as a Quality Analyst specializing in manual and automation testing using Cypress, Selenium, Postman, and SQL. Skilled in API and UI testing, defect management, and Agile delivery. Proficient in analyzing requirements, collaborating with Product Owners, and supporting backlog grooming, bridging the gap between QA and Business Analysis. Certified Scrum Master and MBA in Business Analytics.

Meenakshi Annamalai

Chicago, IL | meenakshiannamalai18@gmail.com | +13125398664

UVisa – BFD – EAD 2029(Renewable on it own)

Employer Sponsorship not required

PROFESSIONAL SUMMARY:

- Developed automation using Java/JavaScript using **Cypress, Selenium** WebDriver
- Proficient in **JavaScript**, SQL and HTML languages.
- Solid knowledge of OOPs (Object Oriented Programming) concept, its implementation into the framework.
- Advanced knowledge of **Page Object Model (POM)** and its implementation using **Selenium** WebDriver with **Java** and **Cypress** with **JavaScript**.
- Used various frameworks used in test automation like Data Driven, **Page Object Model**, Keyword Driven and Hybrid framework.
- Well versed in languages/technologies like HTML, CSS, **JavaScript**, HTTP, and tools like Eclipse used in test automation of web applications.
- Perform API testing using **Postman** and automating them using frameworks like **Cypress**.
- Experience in working with building tools such as **NPM, YARN**, with version control systems like **GIT**.
- Experience in Visual studio code to run end to end tests with cypress
- Experience is using **SQL** to query RDBMS databases like ORACLE, MS SQL Server
- Experienced in testing client/server architecture-based web applications which use HTTP protocol and are hosted on web and/or application servers like Apache Tomcat, IIS, JBoss and WebSphere.
- Experience in Manual Testing Using **QTest, ALM Octane**
- Extensive expertise in defect-reporting and defect-tracking using **Jira** as a test management tool.
- Results-oriented Fresher **Business Analyst** with a strong background in developing and documenting business requirements, analyzing existing processes and creating visual representations of business processes.
- Knowledgeable in all phases of SDLC and **Agile Methodology**.

EDUCATION:

- Professional Certification: MBA – Business Analytics - Birla Institute of Science & Technology (BITS)-WILP(Work Integrated Learning Program), Dec 2021 - Dec 2023
- Bachelor of Science in Information Technology - Sathyabama Institute of Science and Technology, Chennai, India Aug 2016 - May 2020 ,GPA:3.85/4.00

TECHNICAL SKILLS:

- Testing & QA: Cypress, Selenium WebDriver, Postman, Playwright, QTest, Octane, JAWS (ADA Testing)
- Automation & Languages: JavaScript, TypeScript, Java, SQL, HTML, CSS
- Business Analysis: Requirements Gathering, User Story Writing, Backlog Grooming, Process Modeling, Stakeholder Collaboration
- Databases: Oracle, MySQL, PostgreSQL
- Tools: Jira, Confluence, Git/GitHub, Jenkins, Swagger
- Methodologies: Agile Scrum, BDD, SDLC, Hybrid Frameworks

PROFESSIONALEXPERIENCE:

Bank of America | | Chicago, USA | | May,24-Present

Project : ARM(Access Request Management), GIS Exceptions & RODB

Quality Assurance Analyst/Business Analyst

Responsibilities:

- Manual Testing - test cases and test runs using **QTest, OCTANE**
- Extensively worked in **JIRA** to update the user stories and raise Bugs in the applications.
- Performed manual and automation testing (Cypress, Postman, SQL) to validate UI, API, and database layers.
- Led regression automation through Cloud CST platform, reducing release testing cycle time by 30%.
- Partnered with Product Owners and Scrum Master to refine user stories, acceptance criteria, and sprint planning.
- Created test cases, test data, and scenarios aligned with business requirements, ensuring 95% coverage.
- Conducted ADA compliance testing using JAWS, improving accessibility adherence.
- Facilitated scrum ceremonies (daily stand-ups, backlog refinement, retrospectives) for 18–20 team members.
- Supported BA functions by documenting requirements, analyzing processes, and creating process flows.
- Practiced generating code snippets and test cases using Generative AI (e.g., ChatGPT, GitHub Copilot).
- Familiar with concepts of CI/CD pipelines and how AI can be used for code quality checks.
- Experimented with AI tools for simple tasks like summarizing requirements, identifying code issues, and simulating test scenarios
- Performing Regression Automation Testing through Cloud CST Platform
- Taking part in Release cycle with Release Manager in validating errors in RMT and modifying the jira stories and qtest tc & TR
- Understanding the Product Requirement and comparing it with Story Acceptance criteria and description and did thorough testing according to the ac and description
- Performing Thorough testing for various scenarios and following the ADSF & ADA guidelines using JAWS Tool particularly for ADA
- Worked on cross-browser testing with special focus on Chrome and Edge browsers to ensure that the application works in all browsers.
- Developed and implemented automation framework (**Cypress**) to enhance scripting, scalability, and maintenance.
- Performed API testing using Postman for backend data validation, reducing bug fix rates.
- Actively participating in Scrum ceremonies, Sprint Planning, Daily Stand-up, Sprint Demo, and Sprint Retrospective meeting
- **Planned and led Daily scrum** meetings for 18 to 20 team members to manage Sprint progress and provide project updates.
- Developing and documenting business requirements, analyzing existing processes and creating visual representations of business processes
- **Environment: Cypress, TypeScript, JavaScript, Mocha/Chai, SQL, QTest, Postman, Jira, Chrome, Firefox.**

Wipro Ltd | | Chennai, India

Sept 22 - May 3rd 24

Project: Best Buy - Quality Engineering Tools Team

Responsibilities:

- Automated functional test cases using **Cypress** framework using **TypeScript/JavaScript** using libraries like Class Transformer, **Lodash**.
- Used **Cypress** components like **intercepts, fixtures, commands, tasks**, and **chai** assertions to automate both UI and API test cases.
- Extensively used **CSS** locators by **id, class** and **element** to find the elements in the UI DOM
- Used arrays functions like **for Each, filter, find, map** and **flatMap** to perform JavaScript object manipulation and validations.
- Used **cy. request** to test the APIs and **cy. intercept** to intercept API calls from UI application to validate the **JSON** payloads of the API calls.
- Updated the application **UI** code with **data test ids** so that it will be easier to write the UI automation scripts by querying the **DOM** for the data test ids.
- Implemented integration of **mailosaur** with automation code for testing email templates and **OneTimePasswords** (OTP) sent to emails and phone numbers.
- Monitored the daily automation scripts pipelines and analyzed the failures of the tests in **Cypress Dashboards** and implemented fixes in the automation code.

- Implemented **Page Objects** as **JavaScript** classes for better organization of the automation code.
- Performed manual API testing using POSTMAN and using features in the tool like capturing the authentication token and re-using it in the further API calls by storing in the environment variables.
- Extensively used Swagger to understand API Specifications of the REST APIs for **GET, POST, PUT** and **DELETE** methods.
- Use **GIT** for version control and GitHub for remote repository.
- Extensively worked in **JIRA** to update the user stories and raise defects in the applications.
- Perform Database testing by writing SQL queries involving JOINS, GROUP BY clauses.
- Worked on cross-browser testing with special focus on Chrome and Edge browsers to ensure that the application works in all browsers.

Environment: Cypress, TypeScript, JavaScript, Mocha/Chai, Mailosaur, SQL, QTest, Postman, Jira, Chrome, Firefox.

QA AUTOMATION ENGINEER

July 2021 – Aug 2022

Responsibilities:

- Extensively involved in automation framework transition from **Selenium** to **Cypress**
- Automated UI test cases using **Selenium** as well as **Cypress** framework on electron browser and chrome browser.
- Implemented the **Page Object Model** by utilizing page object files in **Java** as well as **JavaScript**.
- Used both the **CSS Selectors** as well as **XPath** Selectors in **Cypress** and **Selenium** frameworks.
- Asserted the positive negative conditions using the **Chai** libraries by using expect and should constructs.
- Create and executed manual API testing with the help of **Postman**.
- Performed Data-Base testing by writing **SQL** queries involving JOINS, GROUP BY clauses.
- Analyzed test results, tracked defects using **Jira** and generated reports.
- Analyzed user stories and walkthrough test cases with appropriate stakeholders as well as provided feedback on suitability for automation to the project team.
- Use **GIT** for version control and **GitHub** for remote repository.
- Actively participate in Grooming, Sprint Planning, Daily Stand-up, Sprint Demo, and Sprint Retrospective meetings.

Environment: JavaScript, Selenium, Maven, Cypress, SQL, Postman, Jira, Chrome, Firefox.

AUTOMATION ENGINEER

Sept 2020 – June 2021

Responsibilities:

- Automated the manual test cases using the **UI framework** which uses **Selenium** under the hood.
- Used the **XPath** to write locators in the page objects of the UI pages that is extends the custom framework page.
- Written BDD test cases using the **Cucumber/Gherkins** language for converting manual test cases into Given-When-Then format.
- Used the **Cucumber** report to analyze the test case run failures and debugging
- Reviewed extensive **SQL Queries** with complex multi-table joins and nested queries and experienced in SQL query writing using JOINS, FUNCTIONS and other complex concepts and embedded them in the custom XML files that the framework as to be used to validate the test cases
- Create and execute manual API testing with the help of **Postman**.
- Participated in the daily stand-up calls and used JIRA to manage the daily tasks and update them on a timely basis

Environment: Selenium, Oracle DB, Unix/Windows, Git/GitHub, SQL Developer, Jira

ACADEMIC PROJECTS:

- Built an Efficient Model for detecting Brain Tumor Using Deep Learning Techniques and published my paper in IEEE - ICCES015 with the guidance of my Professor in the final year
- Built a Predictive Rate Forecasting Model for North American Transportation using Python and Tableau

Additional Information:

- **Interests:** Badminton, Singing, Travelling, Classical Dancer and Cooking
