Mobile: 408-507-2502
Email: Meghana3123@gmail.com

Education: Masters in Information System Technology, Wilmington University, Delaware.

Project Management: Jira, Confluence, Kantata, Salesforce, MS Project, Excel, IDM

Tools & Utilities: Teradata SQL Assistant, Azure synapse analytics, Azure data bricks, CLEARQUEST, Control -M, Power BI, Tableau.

Programming: C# & SQL

PROFESSIONAL EXPERIENCE:

Client: Blue cross Blue Shield -TX/IL/MT/NM/OK

Mar'22 – Present

Role: Business Data Analyst/Project Manager

Responsibilities:

- Responsible for all activities from managing project kickoff through **implementation until Business validation and signoff.**
- Successfully managed and delivered 20+ projects within budget and on time.
- **Effectively communicated project responsibilities to owners, team members, and other stakeholders in a clear fashion.** Identified and managed project dependencies and critical path.
- **Created and documented project plans, with associated critical path analysis, work breakdown structures, and timelines.**
- Communicated to **Business** on weekly status meetings on project related activities against current projects and goals.
- Designed project scorecards/worksheets that are currently used for project tracking risk management and escalations providing transparency to executive leadership.
- **Led weekly project status meetings and provided regular updates to senior management.**
- Managed project roles, identified resource requirements, defined project deliverables and provided customer satisfaction to ensure quality of projects.
- **Assigned, reviewed, and monitored project work to ensure that progress is within the expected timeline and budget.**
- Maintained open lines of communication with team for any risk.
- **Created Epics/User Stories and Prod mods as per the requirement in JIRA Board.**
- Evaluated the **BAU process** for existing system and performed analysis to **identify product impacts** and gaps to ensure requested change requests to be delivered.
- Coordinated with downstream teams on the communication for project related activities.
- Coordinated and monitored **work-items across teams and clients** in both **onsite and** oversaw the project related status from **offshore team.**

Client: Blue Cross Blue Shield, NJ

Feb'21 – Jan'22

Role: Assistant Project Manager / Data Analyst

Responsibilities:

- **Assisted in the successful delivery of multiple projects(10+) by coordinating project activities, budget and resources.**
- **Collaborated closely with client managers and architects for business Requirements.**
- Created and implemented processes for project management (Agile best practices).
- **Collaborated with cross-functional teams to define project goals, scope, and deliverables.**
- Identified and mitigated project risks to ensure successful project outcomes.
- **Assigned, reviewed, and monitored project work to ensure that progress is within the expected timeline and budget.**
- **Outlined the communication plan for entire project, Arranged workshops, Business meetings and Impact analysis.**
- Coordinated and monitored **work-items across teams and clients** in both **onsite** and oversaw the project related status from **offshore team**.
- Monitored project progress and identified areas for improvement for on time delivery.
- Coordinated with vendors and contractors to ensure timely delivery of project requirements
- Acted as a primary liaison between the Senior Project Manager, Architects and other technical teams in the organization/projects.
- Conducted requirements analysis, validation, testing and prepared mapping documents if required.
- Understanding the Data architecture **specification** and **analyzed the data** according to business requirement.
- Managed project documentation and reporting.
- Built and maintained SQL queries for data analysis, data mining and data manipulation.
- Organized analytical data; ensure data quality and aggregate data for strategic reporting, Performance optimization on database solutions.

Client: DIRECTV/AT&T, El Segundo, CA

Mar '18 – Dec'20

Role: Data Analyst/Assistant Project Manager

Project Description: CDO BI - Sales and Revenue Subscriptions

Responsibilities:

- Coordinating tasks and issues with stakeholders and senior Leadership on weekly basis.
- Involved in all phases of **SDLC** and **post-production validation support**.
- Participated in solution analysis, design, execution, testing and implementation SDLC Environment.
- Managed communication of project goals and timelines, set expectations and tracked milestones with offshore teams to drive project velocity.
- Organized and led standup meetings with an offshore team of 10-member cross functional resources including solution architects, developers and testers.
- Understanding the specification and analyzed data according to project requirement.
- Created HLD and LLD and review mapping documents with architects and leads to start the development.
- Involved in qualitative and quantitative risk analysis and mitigation strategy planning for software projects.

- Used Microsoft Excel and SQL to identify an underperforming client product area and recommended improvements to product owners.
- Analysis of business requirements to determine impact to existing legacy systems.
- Involved in understanding Business and data needs and analyze multiple data sources and document **data mapping** to meet those needs.

Client: Ayco - Goldman Sachs, Albany, NY

Nov'16 – Feb'18

Role: Data Analyst

Responsibilities:

- Involved in **Data Extraction, Transformation and Loading from** source systems.
- Involved in complete Software lifecycle development process (SDLC) Agile scrum process.
- Performed **Data analysis** and prepared the **Physical data base** based on the requirements.
- Responsible for populating warehouse-**staging tables**.
- Developed complex mappings using multiple sources and targets in different databases, flat files.
- Query optimization (**explain plans, collect statistics, Primary and Secondary indexes**).
- Integrated various sources into the Staging area in **Data warehouse to Integrate and for cleansing data**.
- Extracted the data from the flat files and other RDBMS databases into staging area and populated onto Data warehouse.
- Working with **SQL DBA's** to set up new deployment environment and new user groups for the environments created by providing them with SQL scripts and necessary documentation to execute the deployment instructions across the **Development-QA-Production Environments**.
- Changes are captured as they happen, allowing up-to-the-minute data to flow between systems to support real-time reporting, business intelligence, and synchronization of applications by **CDC**.
- Performed Unit testing, Integration testing and generated various Test Cases.

Client: PNC Bank, Pittsburgh, PA

Sep '15 – Oct '16

Role: SQL Developer

Responsibilities:

- Involved in requirement **gathering and performed ETL Process**.
- Created **Dimension Tables and Fact Tables** based on the **warehouse** design.
- Created mappings that involved implementation of Business Logic **to load data in to staging area**.
- Implemented various frameworks like Data Quality Analysis, Data Validation and Data Profiling with the help of SQL.
- Developed mappings/sessions using **Informatica Power Center for data loading**.
- Created **tables** as required by the users for most frequently used **data** and written scripts for those tables.
- Involved in performance tuning of the SQL queries and the reports.
- Importing Data from various sources like Excel, SQL Server.
- Wrote Unix scripts, shell scripts for the business needs for missing file check and duplicate files.
- Coded Unix Scripts to capture data from different relational systems to flat files to use them as source file for ETL process.
