Objective

Detail-oriented professional with a strong academic foundation in Technological Systems Management and Information Systems, poised to excel as an IT Business Analyst. Eager to apply analytical skills to understand and document business requirements, analyze complex datasets using Power BI, Excel, and SQL, and create actionable insights that drive system improvements and improve business outcomes. Committed to collaborating with stakeholders to optimize system integration and user experiences.

Education Stony Brook University, Stony Brook, NY

Bachelor of Science in Information Systems,
Wise Honors Program

Expected August 2025

Relevant Courses: OOP, Data Structures, Database Design, Project Management, Applied Calculus I & II

Skills

- **Programming Languages:** Python, SQL, VBA, JavaScript, CSS, HTML, DAX
- **Software:** Microsoft Office, Google Suite, RDBMS, Figma, Canva, Power BI, Tableau, Microsoft CoPilot, JAWS, NVDA
- **Platforms:** Windows (10 & 11), macOS, Android, iOS, MS-DOS, Unix, Linux
- **Web Browsers:** Google Chrome, Firefox, Edge, Safari

Certifications

HTML, CSS, JavaScript, API, AI, Responsive Design, React (in progress through SheCodes)

Experience Data Analyst & Cybersecurity Intern Long Island Power Authority (LIPA) Internship, June 2025 to August 2025

- Performed in-depth data analysis on customer survey and power outage incident data to identify critical trends, geographic patterns, and customer feedback, directly informing operational decision-making and enhancing customer interactions.
- Developed comprehensive data visualizations and reports to effectively present findings, supporting strategic goals for improving outage response strategies and tracking key performance indicators.
- Collaborated with a cybersecurity analyst to research and assess the potential of blockchain applications for enhancing security within utility infrastructure, aligning with the organization's focus on emerging technologies and system improvements.
- Investigated real-world blockchain use cases in the energy sector, culminating in the delivery of a final presentation to internal teams and stakeholders, showcasing potential applications and suggesting innovative solutions for business challenges.

Activities Project CyberLearn Participant Critical Infrastructure Security Consortium (CISC), September 2024 to May 2025

- Cyber security upskilling program following the national curriculum and principals of Idaho National Lab's Cyber Informed Engineering and the Department of Homeland Security's Secure by Demand.
- Program presented by the educational staff at Stony Brook University and the CISC along with local electric and gas utility companies, manufacturers, Brookhaven National Labs (BNL).

Research Experience Brookhaven National Lab, Stony Brook University

- **Rotation 1:** Researched water contamination treatments, focusing on PFAS and 1,2-dioxane, and conducted lab work on coagulation/flocculation methods.
- **Rotation 2:** Analyzed energy conversion devices using LabView and MATLAB for data analysis, gaining foundational Python skills and experience in CAD applications.
