

Mihir Modi

Summary

Open to relocate | 945 233 4435 | mmodi2561@gmail.com | [LinkedIn](#) | [GitHub](#) | [Medium](#)

Cloud/DevOps Engineer with 3 years of experience optimizing software development lifecycles, infrastructure management, and security compliance. Proficient in AWS services, containerization with Docker and Kubernetes, and CI/CD implementation using Jenkins. Skilled in infrastructure-as-code (IaC) with Terraform, configuration management with Ansible, and monitoring solutions like Prometheus and Grafana. Experienced in DevSecOps practices, integrating security into the SDLC from agile development to production, ensuring business requirement compliance and other governance policies. Strong background in network security, access controls, and automated security scanning to enhance system resilience. Demonstrates problem-solving skills and a proven ability to streamline development processes, enforce security best practices, and drive operational efficiency in dynamic cloud environments.

Skills

Programming Languages :	Python, SQL, YAML, HCL, Boto3
Tools and Technology :	Jenkins, Terraform, Kubernetes, Docker, Ansible, Nginx, AWS, Azure, VirtualBox, Maven, Gradle, SDLC, Agile, Waterfall, DevSecOps, SOX, PSI DSS, HIPAA, Power Bi
Protocols :	TCP/IP, UDP, IP address, HTTP/HTTPS, SSL/TLS, DHCP, FTP, DNS
AWS Services :	VPC, EC2, ELB, IAM, S3, AWS KMS, Secret, Cloud front, Autoscaling, EKS, ECS, RDS, SQS, SNS
Database :	SQL Server, MySQL, Aurora, DynamoDB
Version Control/Other Tools :	Git, GitHub, Jira, Trello
Operating System :	Windows, Linux, Mac
Monitoring and Observability:	Prometheus, Grafana, Cloud Watch

Professional Experience

Cloud Engineer, PNC Financial(contract)

08/2024 – 01/2025 | USA

- Participated in the entire Software Development Lifecycle (SDLC) utilizing DevSecOps development methodology, ensuring iterative progress and continuous improvement, resulting in a 20% increase in project delivery speed.
- Developed automated compliance enforcement using IAM policies, VPC security groups, and AWS Config, mitigating security vulnerabilities by 30%.
- Integrated DevSecOps security scanning tools (Trivy, Checkov, SonarQube) into Jenkins CI/CD pipelines, enabling automated security compliance checks and reducing release time by 40%.
- Collaborated with product owners and DevOps teams to translate application scaling needs into modular Terraform templates, supporting faster environment spin-up and enabling parallel development efforts.
- Optimized infrastructure footprint and cloud spend by identifying underutilized resources, improving deployment consistency, and aligning cloud usage with business demand forecasts.
- Enhanced collaboration between engineering and product teams by translating technical deployment metrics into actionable business insights, informing release planning and cloud budgeting decisions.

Cloud Business Analysis, BosLeo Technology Pvt Ltd

01/2020 – 05/2022 | India

- Designed and implemented AWS cloud solutions aligned with business goals, enabling the platform to handle 20,000+ concurrent users through scalable, event-driven architectures (Lambda, SQS, SNS).
- Conducted detailed cost optimization using AWS Cost Explorer and Trusted Advisor, reducing cloud expenditure by 25% through right sizing and efficient resource planning.
- Utilized the AWS Well-Architected Framework to perform architectural reviews, identify performance bottlenecks, and suggest design optimizations that improved availability and reduced failure risks.
- Architected and deployed a scalable, modular AWS infrastructure using Terraform, leveraging private modules to provision networking, compute, storage, and security resources, reusability, and seamless automation across environments.
- Translated business requirements into technical infrastructure using Terraform, modularizing reusable components to accelerate deployment across environments.
- Enhanced application security by implementing AWS WAF and industry best practices, fortifying APIs and endpoints against DDoS, SQL injection, and OWASP vulnerabilities, while ensuring PCI DSS compliance for secure customer transactions.
- Check real-time monitoring using Prometheus and Grafana, setting up alerts for system health, traffic spikes, and security anomalies, reducing downtime by 40%.

Education

Masters of Science, Information Technology Management

The University of Texas at Dallas

TX, USA

Bachelors of Engineering, Computer Engineering

Charotar University of Science and Technology

Gujarat, India
